Revision History

Initial Issue AA, 09/2014

Software Version 1.0

Issue AB, 12/2014

Software Version 1.0

Updates were made to the following sections: Symbol Explanations, Figure 1.10, Figure 1.11, Figure 9.3, Figure 9.5, Figure 9.6, Figure 9.7, Disposal Of Electrical Instrumentation, Lifting and Carrying Instructions, Replacing the Sheath Fluid Harness and/or Waste Harness, and Installing the Instrument and Connecting the Equipment.

Issue AC, 02/2015

Software Version 1.1

Updates were made to the following sections:

Safety Notices

Symbol Explanations

CHAPTER 1, System Overview

Optical Fiber Fluidics Module Plate Loader Components System Configuration Instrument Specifications Performance Characteristics

CHAPTER 2, Using the CytExpert Software

Start Page Acquisition Screen Test Tubes Plot area Status Bar Analysis Screen Compensation Experiment Screen QC Experiment Screen Software Menu Graphic and Gating Styles Software Settings

CHAPTER 3, Daily Startup

Opening the Software Selecting the Plate Loader Sample Injection Mode [With Plate Loader] Running the System Startup Program Running the System Startup Program [With Plate Loader]

CHAPTER 4, Instrument Quality Control

Preparing the QC Sample [With Plate Loader] Collecting QC Data Confirming Results Collecting QC Data [With Plate Loader] Creating Levey-Jennings Charts QC Result Manager

CHAPTER 5, Data Acquisition and Sample Analysis

Creating an Experiment Creating an Experiment [With Plate Loader] Sampling and Collecting Data Setting the Channel and Label Adjusting the Threshold Creating Plots and Gates

Setting Customized Parameters

Setting Custom Statistics

Analyzing and Exporting Data

Exporting FCS Files

Exporting Plots or the Statistics Table of Multiple Tubes as Picture Files

Printing Graphics

CHAPTER 6, Compensation

Creating a Compensation Experiment Creating a Compensation Experiment [With Plate Loader] Manually Adjusting Compensation Managing the Compensation Library

CHAPTER 7, Data Review

Calculating Sample Injection Volume and Concentration Importing Previously Acquired Data

CHAPTER 9, Troubleshooting

Plate Loader Hazard Labels and Location Table 9.2, Troubleshooting [With Plate Loader]

CHAPTER 10, Cleaning Procedures

Daily Clean [With Plate Loader] Preparing the Instrument for Transport or Storage

CHAPTER 11, Replacement/Adjustment Procedures

Adding the Deep Clean Solution Replacing the Sample Probe Assembly [With Plate Loader] Changing the Sample Probe from the Single Tube Sample Station to the Plate Loader [With Plate Loader] Changing the Sample Probe from the Plate Loader to the Single Tube Sample Station [With Plate Loader] Replacing the Plate Holder [With Plate Loader] Plate Loader Module Removal and Reinstallation [With Plate Loader] Calibrating the Sample Flow Rate Calibrating the Sample Flow Rate [With Plate Loader] Changing Sample Mixing and Backflush Settings Calibrating the Plate Position [With Plate Loader]

This document applies to the latest software listed and higher versions. When a subsequent software version affects the information in this document, a new issue will be released to the Beckman Coulter Web site. For labeling updates, go to

www.beckman.com and download the latest version of the manual or system help for your instrument.

Safety Notices

Read all product manuals and consult with Beckman Coulter-trained personnel before attempting to operate the instrument. Do not attempt to perform any procedure before carefully reading all instructions. Always follow product labeling and manufacturer's recommendations. If in doubt as to how to proceed in any situation, contact us.

Beckman Coulter, Inc. urges its customers to comply with all national health and safety standards such as the use of barrier protection. This may include, but it is not limited to, protective eyewear, gloves, and suitable laboratory attire when operating or maintaining this or any other automated laboratory analyzer.

This manual assumes that users have basic knowledge of the Windows operating system, as well as experience working with laboratory testing technology. Users are invited to consult the appropriate documentation for such information.

Alerts for Danger, Warning, and Caution

A DANGER

DANGER indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

WARNING

WARNING indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

CAUTION indicates a potentially hazardous situation, which, if not avoided, may result in minor or moderate injury. It may also be used to alert against unsafe practices.

Safety Precautions

🔨 WARNING

Risk of operator injury if:

- All doors, covers and panels are not closed and secured in place prior to and during instrument operation.
- The integrity of safety interlocks and sensors is compromised.
- Instrument alarms and error messages are not acknowledged and acted upon.
- You contact moving parts.
- You mishandle broken parts.
- Doors, covers and panels are not opened, closed, removed and/or replaced with care.
- Improper tools are used for troubleshooting.

To avoid injury:

- Keep doors, covers and panels closed and secured in place while the instrument is in use.
- Take full advantage of the safety features of the instrument.
- Acknowledge and act upon instrument alarms and error messages.
- Keep away from moving parts.
- Report any broken parts to your Beckman Coulter Representative.
- Open/remove and close/replace doors, covers and panels with care.
- Use the proper tools when troubleshooting.

System integrity could be compromised and operational failures could occur if:

- This equipment is used in a manner other than specified. Operate the instrument as instructed in the Product Manuals.
- You introduce software that is not authorized by Beckman Coulter into your computer. Only operate your system's computer with software authorized by Beckman Coulter.
- You install software that is not an original copyrighted version. Only use software that is an original copyrighted version to prevent virus contamination.

If you purchased this product from anyone other than Beckman Coulter or an authorized Beckman Coulter distributor, and, it is not presently under a Beckman Coulter service maintenance agreement, Beckman Coulter cannot guarantee that the product is fitted with the most current mandatory engineering revisions or that you will receive the most current information bulletins concerning the product. If you purchased this product from a third party and would like further information concerning this topic, contact us.

Risk of instrument damage. This device is intended for indoor use only. To avoid device damage, do not install the instrument outdoors.

Risk of personal injury. Safety protection can be impaired if used in a manner not specified by the manufacturer. To avoid personal injury, use the instrument according to the manufacturer's instructions only.

Symbol Explanations

Symbol	Warning Condition	Action
	Biohazard Symbol	Consider all materials (specimens, reagents, controls, and monoclonal antibodies) and areas these materials come into contact with as being potentially infectious.
		Wear appropriate barrier protection and follow safe laboratory procedures when handling any material in the laboratory.
	Caution	To indicate that caution is necessary when operating the device or control close to where the symbol is placed, or to indicate that the current situation needs operator awareness or operator action in order to avoid undesirable consequences.
4	Caution, Risk of Electric Shock	To indicate hazards arising from dangerous voltages.
	Warning, Sharp elements	To warn of sharp element.
	Warning, Crushing of hands	To warn of a closing motion of mechanical parts of equipment.

Symbol	Warning Condition	Action
	Recycling Symbol WEEE Wheeled Bin Symbol	The symbol of a crossed-out wheeled bin on the product is required in accordance with the Waste Electrical and Electronic Equipment (WEEE) Directive of the European Union. The presence of this marking on the product indicates:
		 that the device was put on the European Market after August 13, 2005 and
		 that the device is not to be disposed via the municipal waste collection system of any member state of the European Union.
		For products under the requirement of WEEE directive, please contact your dealer or local Beckman Coulter office for the proper decontamination information and take-back program which will facilitate the proper collection, treatment, recovery, recycling, and safe disposal of device.
		For the Japan market:
		This system is considered an industrial waste, subject to special controls for infectious waste. Before disposal of the system, refer to the Waste Disposal and Public Cleaning Law for compliance procedures.
	Laser Radiation	The laser radiation symbol indicates that there can be laser light radiation in the area. Take precautions to prevent exposure.
	RoHS Caution Symbol	This label indicates that the electronic information product contains certain toxic or hazardous substances. The center number is the Environmentally Friendly Use Period (EFUP) date, and indicates the number of calendar years the product can be in operation. Upon the expiration of the EFUP, the product must be immediately recycled. The circling arrows indicate the product is recyclable. The date code on the label or product indicates the date of manufacture.
CLASS 1 LASER PRODUCT PRODUIT LASER CLASSE 1 1类激光产品	Laser Class I	This label indicates that this product is a Class I Laser product. Take precautions to prevent exposure.

Symbol	Warning Condition	Action
	Consider all materials (specimens, controls, monoclonal antibodies, and so forth) as being potentially infectious.	Wear standard laboratory attire and follow safe laboratory procedures when handling any material in the laboratory.
UK CA	UKCA Mark	A "UKCA" mark indicates that a product has been assessed before being placed in the UK market, and has been found to meet UK safety, health, and/or environmental protection requirements.

This device complies with the emissions and immunity requirements as specified in the EN/IEC 61326 series of Product Family Standards for a "basic electromagnetic environment". Such equipment is supplied directly at low voltage from public mains network. This equipment is not intended for residential use.

This device generates, uses, and can radiate unintentional radio-frequency (RF) energy. If this device is not installed and operated correctly, this RF energy can cause interference with other equipment. It is the responsibility of the end user to be sure that a compatible electromagnetic environment for the device can be maintained so that the device operates as intended.

In addition, other equipment can radiate RF energy to which this device is sensitive. If one suspects interference between this device and other equipment, Beckman Coulter recommends the following actions to correct the interference:

- 1. Evaluate the electromagnetic environment before installation and operation of this device.
- 2. Do not operate this device close to sources of strong electromagnetic radiation (for example: unshielded intentional RF sources), as these can interfere with proper operation. Examples of unshielded intentional radiators are handheld radio transmitters, cordless phones, and cellular phones.
- 3. Do not place this device near medical electrical equipment that can be susceptible to malfunctions caused by close-proximity to electromagnetic fields.
- 4. This device has been designed and tested to CISPR 11, Class A emission limits. In a domestic environment, this device may cause radio interference, in which case, you may need to take measures to mitigate the interference.

CHAPTER 8:	Data Review, 8-1
	Overview, 8-1
	Copying Experiments and Importing Data, 8-1 Copying a Previously Acquired Experiment, 8-1 Importing Previously Acquired Data, 8-1
	Setting the Plots and Statistics, 8-3 Creating Histogram and Dot Plot Overlays, 8-5
	Calculating Sample Volume and Concentration, 8-7
	Adjusting Compensation Settings, 8-8
	Exporting Results, 8-9
CHAPTER 9:	Daily Shutdown, 9-1
	Overview, 9-1
	Preparing the Cleaning Solution, 9-1
	Running Daily Clean , 9-1
	Shutting Down the Instrument, 9-2
	Auto Shutdown [CytoFLEX LX Only], 9-3
CHAPTER 10:	Troubleshooting, 10-1
	Overview, 10-1
	Precautions/Hazards, 10-1 Laser Related Hazards, 10-1 Laser Beam Hazards, 10-2 Laser Warning Labels, 10-3

Hazard Labels and Locations, 10-6 Biohazard Label and Location, 10-6 Electrical Shock Hazard Label and Location, 10-7 Caution Labels and Location, 10-8 Plate Loader Hazard Labels and Location, 10-8

Disposal Precaution, 10-9

Troubleshooting Table, 10-9

Backup and Restore, 10-20 Backup, 10-20 Restore, 10-23 Log Cleanup, 10-26

CHAPTER 11: Cleaning Procedures, 11-1

Overview, 11-1

Routine Cleaning, 11-1 Daily Clean, 11-1 Daily Clean [With Plate Loader], 11-5 Cleaning the Sample Station, 11-7 Cleaning the Sample Probe, 11-8 Deep Clean Procedure, 11-9 Cleaning the 4 L Sheath Fluid Container, 11-11 Cleaning the 4 L Waste Container, 11-12

Nonscheduled Cleaning, 11-14 Surface Cleaning and Disinfection, 11-14 Preparing the Instrument for Transport or Storage, 11-15

CHAPTER 12: Replacement/Adjustment Procedures, 12-1

Overview, 12-1

Routine Replacement/Adjustment, 12-2 Front Cover Removal and Reinstallation, 12-2 Removal, 12-2 Reinstallation, 12-3 Right-Side Cover Removal and Reinstallation, 12-4 Removal, 12-4 Reinstallation, 12-5 Filling the 4 L Sheath Fluid Container, 12-6 Replacing the 10 L Sheath Fluid Cubitainer, 12-7 Emptying the 4 L Waste Container, 12-9 Emptying the 10 L Waste Cubitainer, 12-10 Managing the Maintenance Reminder, 12-14 Adding the Deep Clean Solution, 12-17 Replacing the Sheath Fluid Filter, 12-18 Unclogging the Sample Probe [With Sample Injection Mode Control Kit, 12-22 Unclogging the Sample Probe [Without Sample Injection Mode Control Kit, 12-31

Replacing the Sample Probe and/or the Sample Peristaltic Pump Tubing, 12-38
Replacing the Sample Probe Assembly [With Plate Loader], 12-48
Changing the Sample Probe from the Single Tube Sample Station to the Plate Loader [CytoFLEX With Plate Loader], 12-54
Changing the Sample Probe from the Plate Loader to the Single Tube Sample Station [CytoFLEX With Plate Loader], 12-59
Inspecting the Liquid Flow Path for Leaks, 12-63
Priming the Flow Cell, 12-64
Replacing the Plate Holder [With Plate Loader], 12-65
Plate Loader Module Removal and Reinstallation [With Plate Loader], 12-67
Removal, 12-67
Installation, 12-72
Changing the Event Rate Setting, 12-77

Nonscheduled Replacement/Adjustment, 12-78 Calibrating the Sample Flow Rate, 12-78 Calibrating the Sample Flow Rate [With Plate Loader], 12-82 Setting Laser Delay, 12-86 Replacing the Optical Filter, 12-87 Replacing the Fuse, 12-90 Replacing the Sheath Fluid Harness and/or Waste Harness, 12-91 Changing Sample Mixing and Backflush Settings, 12-94 Calibrating the Plate Position [With Plate Loader], 12-95

Introduction

Overview

This is an introductory chapter that gives a brief description of each document. It contains the following topics presented in this order:

- How to Use Your Manual
- About this Manual
- Conventions
- Graphics

How to Use Your Manual

Your CytoFLEX flow cytometer system includes the manuals listed below:

- Use this **Instructions for Use** manual for information on the day-to-day operation of your CytoFLEX flow cytometer. You can find detailed step-by-step procedures for Daily Startup and Quality Control, customizing detector configuration, running samples, analyzing data, and performing Startup and Shutdown. This manual also contains physical and system specifications, safety and troubleshooting information, as well as information about what your CytoFLEX flow cytometer does and the methods guiding operation. It also contains procedures for cleaning and maintenance.
- The **CytoFLEX Setup Guide** provides instructions for unpacking and setting up the CytoFLEX flow cytometer system.
- The **CytoFLEX S Special Configuration Specifications** package insert contains the sections and procedures that are specific to the CytoFLEX S series. The CytoFLEX S Special Configuration Specifications package insert should be used along with the Instructions for Use manual.

About this Manual

The information in the Instructions for Use manual is organized as follows:

CHAPTER 1, System Overview

Provides information regarding the individual components of the CytoFLEX flow cytometer and the corresponding functions of these components.

CHAPTER 2, Using the CytExpert Software

Provides an overview of each aspect of the software's functions.

CHAPTER 3, Operation Principles

Describes how the Cytometer measures scattered light and fluorescence as cells pass through the laser beam.

CHAPTER 4, Daily Startup

Provides instructions for starting your CytoFLEX flow cytometer and navigating to the sample testing standby state.

CHAPTER 5, Instrument Quality Control and Standardization

Provides instructions for performing daily quality control (QC) on your CytoFLEX flow cytometer to confirm the instrument is working correctly and to ensure accurate experimental data measurement. Quality control allows you to determine whether your instrument can provide adequate signal strength and precision.

CHAPTER 6, Data Acquisition and Sample Analysis

Provides instructions for operating the CytoFLEX instrument, including data acquisition, analyzing and exporting results, and manually adjusting the compensation during the acquisition and analysis.

CHAPTER 7, Compensation

Describes how to create a compensation experiment and automatically calculate compensation values after acquiring the single color data. It also explains how to use these calculations for other experiments.

CHAPTER 8, Data Review

Describes how to use the Analysis screen to analyze data that has already been acquired.

CHAPTER 9, Daily Shutdown

Describes how to keep the instrument in optimal condition through daily cleaning during the shutdown procedure.

CHAPTER 10, Troubleshooting

Describes some common problems and their solutions in a basic troubleshooting matrix.

CHAPTER 11, Cleaning Procedures

Describes how to carry out certain routine and nonscheduled cleaning procedures.

CHAPTER 12, Replacement/Adjustment Procedures

Describes how to carry out certain routine and nonscheduled replacement and adjustment procedures.

APPENDIX A, Instrument Installation

Provides the instrument installation procedures for your CytoFLEX flow cytometer.

APPENDIX B, CytExpert Electronic Record Management

Provides the instructions for using the CytExpert Electronic Record Management software option.

APPENDIX C, Sample Injection Mode Control Kit

Provides the instructions for using the CytoFLEX Sample Injection Mode Control Kit.

APPENDIX D, Deep Well Plate

Provides a list of deep well plates suggested for use on the Plate Loader DW.

APPENDIX E, Custom Optical Filters

Describes how to install the custom optical filter.

APPENDIX F, WDM Beam Splitter Provides the instructions for using the WDM beam splitter.

APPENDIX G, Good Practices for Cyber Security Provides instructions for cyber security.

APPENDIX H, Table of Hazardous Substances

Provides the table of hazardous substances with the hazardous substance name and concentration.

Conventions

This document uses the following conventions:

- Bold face font indicates buttons or selections that appear on the workstation screen.
- The term "select" is used to indicate the following action:
 - To click with a mouse.

NOTE The verb "press" is reserved for mechanical buttons, such as keys on the keyboard.

- The software path to a specific function or screen appears with the greater than (>) symbol between screen options.
- Links to information in another part of the document for additional information are in blue and are underlined. To access the linked information, select the blue, underlined text.
- The information in your Instructions for Use manual applies to the CytoFLEX and CytoFLEX S instruments equipped with and without a plate loader, and the CytoFLEX LX, unless otherwise specified.
 - **NOTE** When information in this document only applies to the plate loader configuration, it is marked [With Plate Loader]. When information in this document only applies to the configuration not equipped with a plate loader, it is marked [Without Plate Loader]. When information in this document only applies to one instrument in the platform, it is marked either [CytoFLEX], [CytoFLEX S] or [CytoFLEX LX].
 - **NOTE** There are two kinds of plate loaders, the standard CytoFLEX Plate Loader and the CytoFLEX Plate Loader Deep Well (DW). The CytoFLEX Plate Loader DW (hereinafter called as Plate Loader DW) is compatible with CytoFLEX, CytoFLEX S, and CytoFLEX LX instruments. When information in this document only applies to one plate loader, it is marked either [Plate Loader DW] or [Standard Plate Loader].

- Sections that contain entirely new content are flagged with a New Section icon with a the of the section title or chapter.
- The CytExpert Default software installation screens are shown in all instances unless otherwise specified.

- **IMPORTANT** IMPORTANT is used for comments that add value to the step or procedure being performed. Following the advice in the IMPORTANT adds benefit to the performance of a piece of equipment or to a process.
- **NOTE** NOTE is used to call attention to notable information that should be followed during use, or maintenance of this equipment.

Graphics

All graphics, including screens and printouts, are for illustration purposes only and must not be used for any other purpose. For example, software screens that show the CytoFLEX system in the background may not depict the latest production version of the system.

CHAPTER 1 System Overview

Overview

This chapter describes the individual components of the CytoFLEX flow cytometer and the corresponding functions of these components.

This chapter contains information on:

- Product Description
- Main Components
- Optical Components
- Fluidics System
- Sample Station
- Plate Loader Components
- System Configuration
- Consumables and Supplies
- Instrument Specifications
- Performance Characteristics
- Reagent Limitations

Product Description

The CytoFLEX and CytoFLEX LX flow cytometers are used for the qualitative and quantitative measurement of biological and physical properties of cells and other particles. These properties are measured when the cells pass through one or multiple laser beams in a single-file. The CytoFLEX flow cytometer can perform up to 13 color marker analysis. The system can be ordered in various configurations. The CytoFLEX S may be ordered in various configurations from 2 lasers, 4 colors to a maximum of 4 lasers, 13 colors. The CytoFLEX LX flow cytometer can perform up to 21 color marker analysis. The system can be ordered in various configurations from a 4 laser, 14 colors, to a maximum of 6 lasers, 21 colors. Many of the configurations can be upgraded in the field. For Research Use Only. Not for use in diagnostics procedures.

NOTE A CytoFLEX instrument cannot be upgraded to a CytoFLEX S cytometer.

Main Components

Risk of instrument damage and/or instrument stability. Do not place any objects on top of the instrument, as this could cause warping of the top cover or affect the stability of the optical path.

The instrument consists of three main components: Fluid Containers/Cubitainers, Cytometer, and the Workstation.

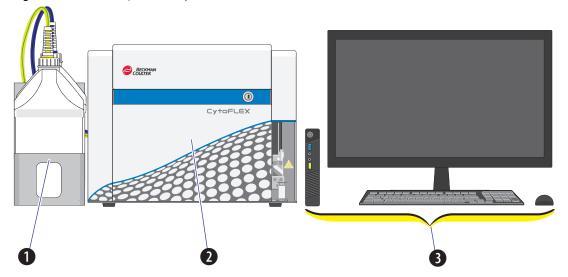

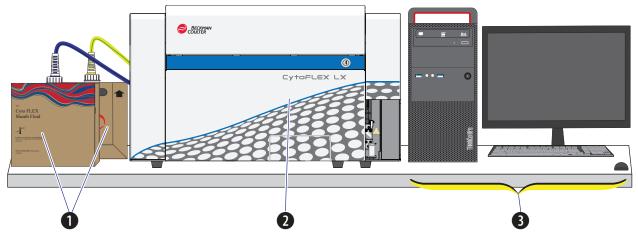

Figure 1.1 Main Components [CytoFLEX Without Plate Loader]

- 1. Fluid Containers. Accommodates sheath fluid and waste liquids as required for operation of the instrument.
- 2. Cytometer. Provides signal generation and collection.
- 3. Workstation. Displays the content of the workstation and data generated by the Cytometer.

Figure 1.2 Main Components [CytoFLEX LX]

1. Fluid Cubitainers. Accommodates sheath fluid and waste liquids as required for operation of the instrument.

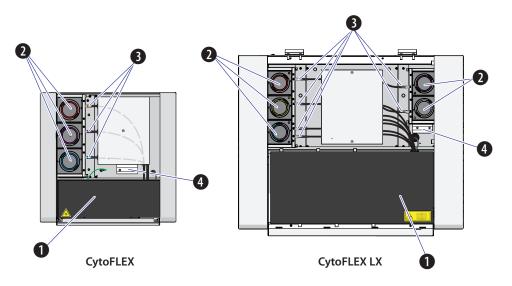

NOTE The CytoFLEX LX does not have a fluid container holder.

- 2. Cytometer. Provides signal generation and collection.
- **3.** Workstation. Displays and manipulates the contents of the Workstation and displays data generated by the Cytometer.

Optical Components

Risk of operator injury. When operating the instrument, keep the top cover in the closed position to prevent the top cover from falling. When opening the top cover, be cautious to avoid any possible pinch points.

The optical components are located in the upper portion of the Cytometer and are visible when the top cover is open. Three parts are included: an optical bench, detector arrays also known as wavelength division multiplexers (WDMs), and optical fibers. Optical components include equipment such as lasers and signal detectors that are used to excite, transmit, and collect optical signals.

- 1. Optical bench. Includes laser light sources, an optical beam combiner, and an integrated optics flow cell assembly. The optical bench cover is equipped with a laser interlock that turns the lasers off unless the cover is tightly closed.
- 2. Wavelength division multiplexer (WDM). Each WDM is a unique detector array that corresponds to a different laser, or in some cases two lasers. Each WDM contains optical filters and detectors for detecting channel fluorescence or scatter from a particular laser. It is necessary to ensure that the filter and software settings match for each channel.
- 3. Optical fiber. Transmits emitted fluorescence to the specific WDM.

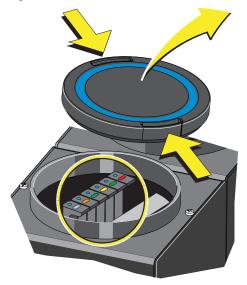

Risk of instrument damage. Do not place sample tubes in the optical filter holder. Liquid spills can damage instrument components. Use a tube rack to hold any sample tubes.

4. Optical filter holder. Securely holds additional CytoFLEX platform optical filters.

Wavelength Division Multiplexer (WDM)

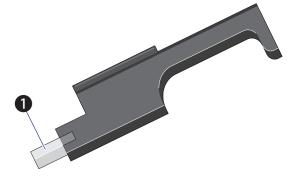

Each WDM corresponds to a different laser, or in some cases two lasers. The color of the ring on each cap corresponds to the color of the respective laser. Pressing the two release buttons on opposite edges of the cap allows you to open the WDM and replace the filters inside. See Figure 1.3. All optical filters are designed to be interchangeable. Refer to CHAPTER 12, Replacing the Optical Filter to replace an optical filter.

Figure 1.3 Optical Filter Mounts

Each optical filter mount has an optical filter glass piece. See Figure 1.4.

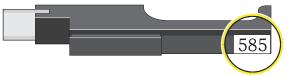

Figure 1.4 Optical Filter Mount with Optical Filter

1. Optical filter glass piece

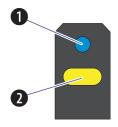

Each optical filter mount is labeled with the corresponding laser and band-pass information. See Figure 1.5.

The top of each optical filter mount has two marks. The color of the dot (1) indicates the color of the laser. See Figure 1.6. The color of the line (2) indicates the wavelength range of the optical band-pass filter. See Figure 1.6.

- 1. Indicates corresponding laser color: Blue indicates a 488 nm laser; Red indicates a 638 nm laser; Violet indicates a 405 nm laser; Yellow indicates a 561 nm laser; Pink indicates a 808 nm laser; White indicates either 375 nm or 355 nm.
- 2. ______ . Indicates the band-pass wavelength ranges; the midpoint of the band-pass is indicated numerically on the lateral side of the mount.

Band-pass filters are used to transmit fluorescence within a specific range of wavelength. These ranges are designed to measure fluorescence from fluorochromes such as those listed in Table 1.1. (with red and violet laser upgrades installed). You can change the optical filters according to your detector configuration. There is no need to realign the optical system when the filters are changed.

561 nm	610/20 BP	Y610	mCherry, ECD, PE-CF594
	763/43 BP	Y763	PC7
	585/42 BP	Y585	PE, DsRed
	675/30 BP	Y675	PC5, mPlum
	710/50 BP	Y710	PC5.5, PE-AF680
638 nm	763/43 BP	R763	APC-A750, APC-Cy7, APC-H7, APC- eFluor 780, DRAQ7
	660/10 BP	R660	APC, Alexa Fluor 647, eFluor 660, Cy5
	712/25 BP	R712	APC-A700, Alexa Fluor 700, Cy5.5

Table 1.7 WDM Optical Filter Mount Color Codes [CytoFLEX LX with WDM Beam Splitter] (Continued)

NOTE The following are additional channels created when the WDM beam splitter is engaged:

- U(S)740 and U(S)819
- N(S)740 and N(S)819
- V(S)763 and V(S)712

Refer to APPENDIX F, WDM Beam Splitter.

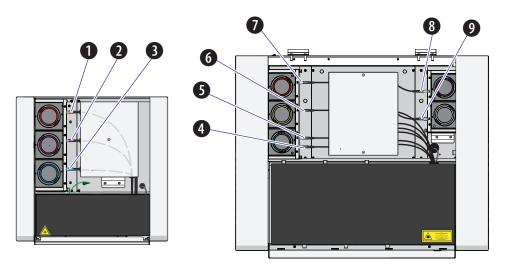

Optical Fiber

Risk of data integrity damage.

- During use, verify that the optical fibers are securely connected to the WDM. A loose connection can alter the optical path and affect fluorescence detection.
- Do not disconnect the fiber as this could contaminate the tip and weaken the signal.
- Do not kink the optical fibers.

Fluorescence emitted by laser-excited fluorochromes is picked up and delivered by each optical fiber to the corresponding detector module. Each optical fiber has a colored ring on the end that connects to the WDM, indicating the color of the corresponding laser. Ensure that the correct fiber is properly connected to the corresponding WDM.

CytoFLEX LX

CytoFLEX

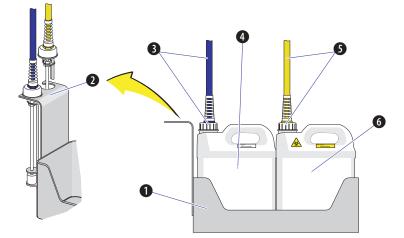

- 1. Red laser fiber
- 2. Violet laser fiber
- 3. Blue laser fiber
- 4. Infrared laser fiber
- 5. Blue laser fiber
- 6. Yellow laser fiber
- 7. Red laser fiber
- 8. Violet laser fiber
- 9. NUV or UV laser fiber

Fluidics System

The fluidics system consists of two parts: the Fluid Containers/Cubitainers and the Fluidics module. The Fluidics module is located on the right side of the Cytometer. You need to open the right-side cover of the instrument (see CHAPTER 12, Right-Side Cover Removal and Reinstallation) to perform maintenance operations. The fluidics system helps to transmit the sheath fluid at a stable rate into the flow cell, forming a laminar fluidics system that ensures that the tested particles go through the detection area sequentially.

NOTE The 10 L sheath fluid and waste cubitainers are available from Beckman Coulter as an alternative to the 4 L Fluid Containers (refer to Figure 1.7) provided with your CytoFLEX and CytoFLEX S Flow Cytometers. Contact us to order the 10 L Sheath/Waste Line Kit. The CytoFLEX LX is only available with the 10 L sheath fluid and waste cubitainers. Refer to Figure 1.8.

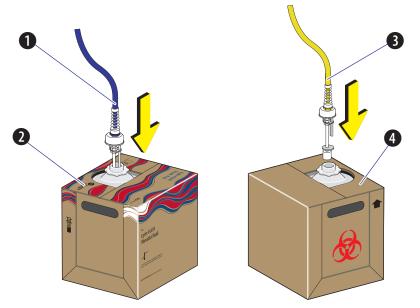

- 1. Fluid Container holder. Holds the Fluid Containers.
- 2. Fluid sensor holder cutout. Holds the sheath fluid harness and the waste harness when removed from their respective containers to protect the sensors from damage and/or contamination.
- **3. Sheath fluid harness.** Connects to the sheath fluid container; conveys the sheath fluid into the instrument. The sheath fluid harness includes a level sensor, sheath fluid tubing, and backflush tubing. The other end of the harness is connected to the Fluidics module in the Cytometer. When the sheath fluid container is near empty, a warning notice is transmitted to the instrument and an audible signal sounds as a warning.
- **4. Sheath fluid container.** 4 L capacity, for holding sheath fluid. Beckman Coulter recommends using CytoFLEX Sheath Fluid or a similar nonionic sheath fluid to ensure system performance.

NOTE The sheath fluid container must be on the same level as the Cytometer.

- 5. Waste harness. Connects to the waste fluid container; conveys the waste fluid from the instrument to the waste container. The waste harness includes a level sensor. The other end of the harness is connected to the Fluidics module in the Cytometer. When the waste fluid container is near full, a warning notice is transmitted to the instrument and audible signal sounds as a warning.
- 6. Waste container. 4 L capacity, for holding waste liquids. Attention to biosafety and waste labeling is required.

NOTE The waste container must be on the same level as the Cytometer.

- 1. Sheath fluid harness. Connects to the sheath fluid cubitainer; conveys the sheath fluid into the instrument. The sheath fluid harness includes a level sensor, sheath fluid tubing, and backflush tubing. The other end of the harness is connected to the Fluidics module in the Cytometer. When the sheath fluid cubitainer is near empty, a warning notice is transmitted to the instrument and an audible signal sounds as a warning.
- 2. Sheath fluid cubitainer. 10 L capacity, for holding sheath fluid. Beckman Coulter recommends using CytoFLEX Sheath Fluid or a similar nonionic sheath fluid to ensure system performance.

NOTE The sheath fluid cubitainer must be on the same level as the Cytometer.

- **3.** Waste harness. Connects to the waste fluid cubitainer; conveys the waste fluid from the instrument to the waste cubitainer. The waste harness includes a level sensor. The other end of the harness is connected to the Fluidics module in the Cytometer. When the waste fluid cubitainer is near full, a warning notice is transmitted to the instrument and audible signal sounds as a warning.
- 4. Waste cubitainer. 10 L capacity, for holding waste liquids. Attention to biosafety and waste labeling is required.

NOTE The waste cubitainer must be on the same level as the Cytometer.

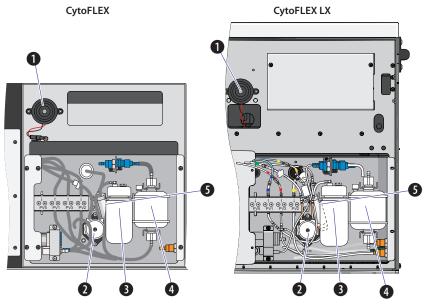

Fluid Containers/Cubitainers

On the CytoFLEX and CytoFLEX S, two Fluid Containers are placed in the Fluid Container holder: a sheath fluid container and a waste container. See Figure 1.7. On the CytoFLEX LX, two 10 L Fluid Cubitainers are placed to the left side of the instrument: a sheath fluid cubitainer and a waste cubitainer. Each container/cubitainer cap is fitted with a harness and a level sensor. The blue harness connects to the sheath fluid container/cubitainer while the yellow harness connects to the waste container/cubitainer. The containers/cubitainers do not require pressurization. Take all necessary biosafety precautions and use proper personal protective equipment when handling the Fluid Containers/Cubitainers.

Fluidics Module

The Fluidics module is on the right side of the Cytometer. To access it, you must first open the right-side cover. Refer to CHAPTER 12, Right-Side Cover Removal and Reinstallation. Inside the module, in addition to working pumps, valves, and tubing, there is a sheath filter and a Deep Clean solution bottle. During maintenance, it may be necessary to replace the filter (see CHAPTER 12, Replacing the Sheath Fluid Filter) or to add Deep Clean solution (see CHAPTER 12, Adding the Deep Clean Solution).

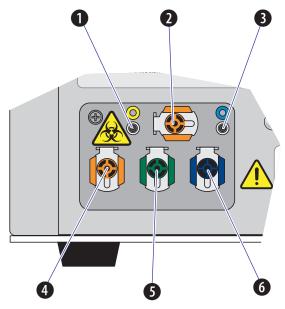

- 1. Alarm. Emits a warning sound when there is a problem with the Fluid Container/Cubitainer capacity or with the performance of certain operations.
 - **NOTE** When the alarm sounds, the Mute Alerter icon appears in the status bar. The alarm continues for about 30 seconds. To mute the alarm temporarily select the **Mute Alerter** in the status bar. The icon disappears when the waste container/cubitainer is emptied and/or the sheath container/ cubitainer is filled/replaced.

- 2. Deep Clean solution peristaltic pump. Transfers cleaning solution to the flow cell.
- 3. Deep Clean solution bottle. Contains the diluted cleaning solution that helps to clean the flow cell.
- 4. Sheath fluid filter. 0.2 µm filter, for filtering sheath fluid.
- 5. Sheath damper. Regulates the sheath flow rate and decreases the sheath flow fluctuation.

Figure 1.10 Fluidic Connections

- 1. Waste level sensor connector. Connects to the waste liquid sensor cable.
- 2. Flow cell waste out. Connects to the waste tubing of the wash station.
- 3. Sheath fluid level sensor connector. Connects to the sheath fluid sensor cable.
- 4. Waste out. Connects to the waste liquid tubing from the flow cell.
- 5. Sheath return. Connects to the sheath fluid tubing.

NOTE The sheath fluid is pressurized by a diaphragm pump. To improve pressure stability, a bypass line returns some of the sheath fluid back into the sheath fluid container/cubitainer.

6. Sheath fluid in. Connects to the sheath fluid tubing.

NOTE Use CytoFLEX Sheath Fluid or other filtered nonionic sheath fluid. Using unfiltered sheath fluid can shorten the service life of the sheath fluid filters and increase noise and debris detection.

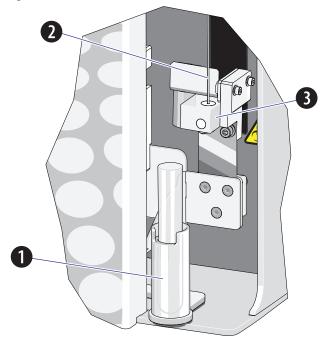

Sample Station

Risk of biohazardous contamination and/or instrument damage. When running samples, it is important to insert the sample tube all the way down into the sample tube holder, until the bottom of the sample tube touches the base of the holder. Failing to do this could cause the sample probe to bend or break on entry. Sample tubes must not exceed 80 mm in height and the outside diameter must not exceed 13 mm.

Figure 1.11 Sample Station with Tube Holder

- **1. Sample tube holder.** Supports sample tubes for testing, such 12 x 75 mm, 1.5 mL, and 2 mL microtubes.
- 2. Sample probe. Draws and transfers samples into the flow cell.
- **3.** Wash station and mixer. During the sampling process, samples are automatically mixed for a default time of 1 second. The sample probe is automatically cleaned when the instrument performs a backflush.

Sample Tube Holder Positions

Three of the sample tube holder positions are shown in Figure 1.12: sample loading position (1), standby position (2), and sample acquisition position (3). You can only distinguish the mixing position from the sample acquisition position by looking directly at the sample tube holder while the Cytometer is processing a sample. The mixing position is about 6 mm lower than the sample acquisition position.

Figure 1.12 Sample Tube Holder Positions

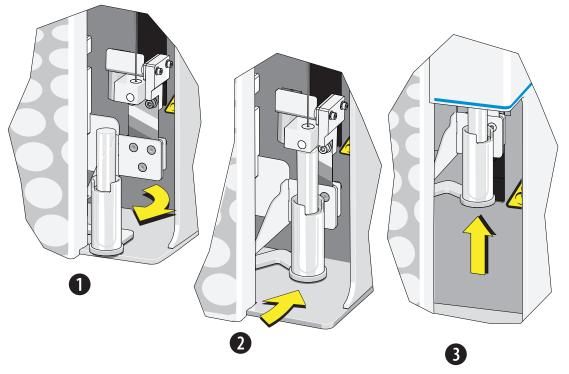

Plate Loader Components

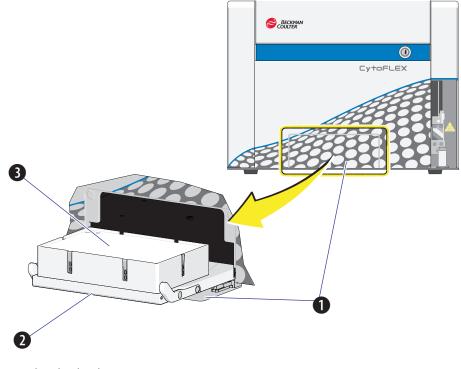

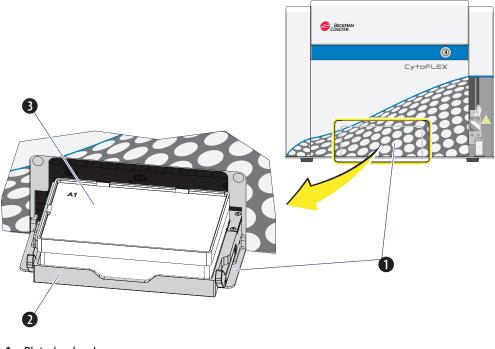

Figure 1.13 Standard Plate Loader [CytoFLEX Shown]

- 1. Plate loader door
- 2. Plate holder stage
- 3. Plate holder (removable)

Figure 1.14 Plate Loader DW [CytoFLEX Shown]

- 1. Plate loader door
- 2. Plate holder stage
- 3. Plate holder (removable)

NOTE The Plate Loader DW supports both standard 96-well plates, and 96-well deep well plates.

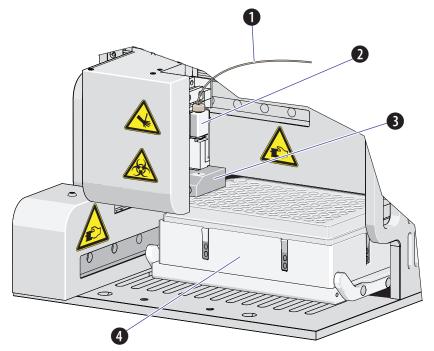

Figure 1.15 Standard Plate Loader (Front Cover Removed)

- 1. Plate loader PEEK tubing
- 2. Plate loader sample probe assembly
- 3. Plate loader wash station
- 4. Plate holder

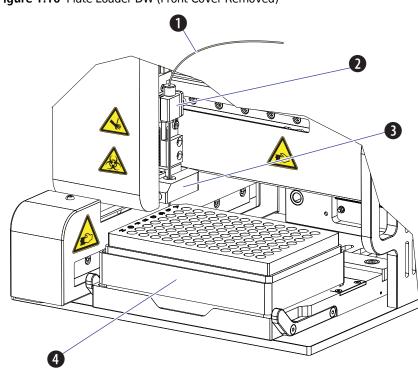

Figure 1.16 Plate Loader DW (Front Cover Removed)

- 1. Plate loader PEEK tubing

- 3. Plate loader wash station
- 4. Plate holder

Plate Holder Components

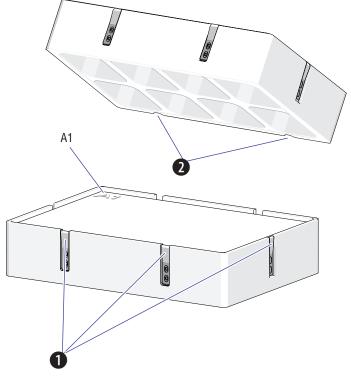

Figure 1.17 Standard Plate Holder without Groove (Standard Plate Loader)

- 1. Spring leaves to hold plate
- 2. Plate holder notches

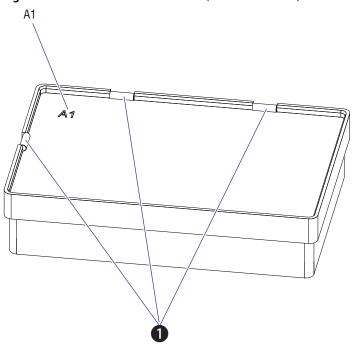

Figure 1.18 Plate Holder with Groove (Plate Loader DW)

- 1. Spring leaves to hold plate
- **NOTE** The plate holder is removable and replaceable. Refer to CHAPTER 12, Replacing the Plate Holder [With Plate Loader].

The plate holder is only used to hold standard 96-well plates. Note that 96-well deep well plates do not use a plate holder.

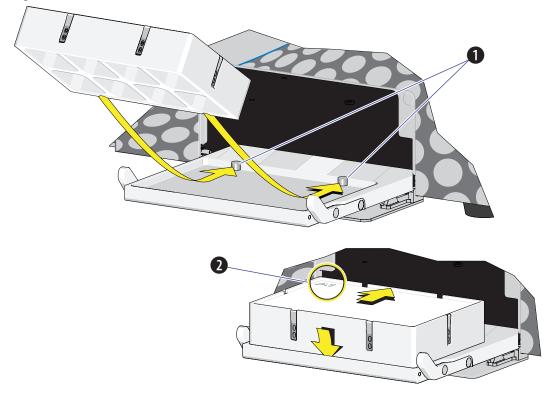

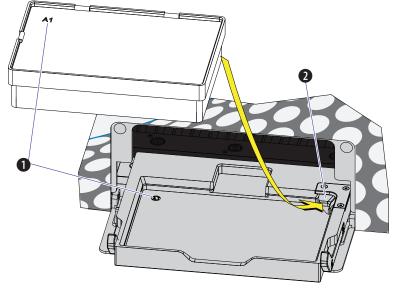

Figure 1.19 Plate Holder Stage (Standard Plate Loader)

- 1. Pins
- 2. Position A1

Figure 1.20 Plate Holder Stage (Plate Loader DW)

- 1. Position A1
- 2. Spring lock

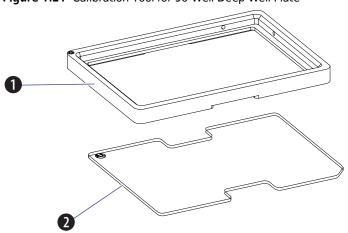

Figure 1.21 Calibration Tool for 96-Well Deep Well Plate

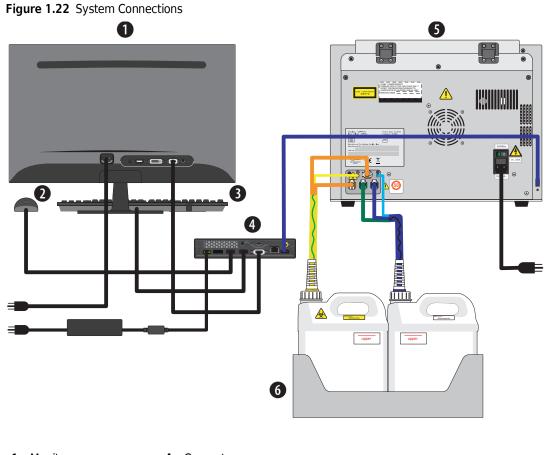

- 1. Calibration frame
- 2. Transparent plate

NOTE The calibration frame and the transparent plate are used to assist the calibration in X-axis and Y-axis. They are delivered together with the Plate Loader DW.

System Configuration

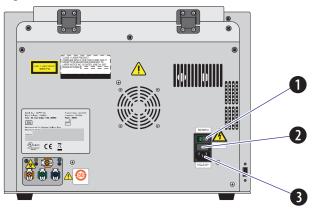

Risk of data loss and/or instrument damage. Never shut off the power or disconnect a data cable while the Cytometer is in the process of performing a task. This could cause data loss or damage to the system.

System Configuration [CytoFLEX and CytoFLEX S]

- 1. Monitor
- 4. Computer
- Mouse
 Keyboard
- 5. Cytometer
- 6. Fluid Container holder

Figure 1.23 Back Cover Connections

- 1. Power switch. Turns Cytometer on and off. An indicator light glows when the power is on.
- 2. Fuse. Protects the internal system from damage by high electrical current.
- 3. Power line socket. Supplies the power to the Cytometer.

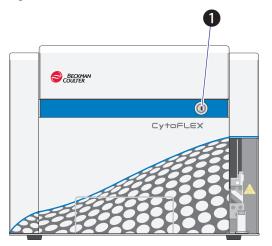

Figure 1.24 Front of Cytometer [CytoFLEX Without Plate Loader Shown]

1. Load button. In addition to the software controls, this button can be used for automatic sample loading and data recording.

NOTE This function is not available in the Plate Loader sample injection mode.

System Configuration [CytoFLEX LX]

IMPORTANT The fluid cubitainers must be on the same level as the Cytometer. Do not place the fluid cubitainers on the floor.

Figure 1.25 System Connections

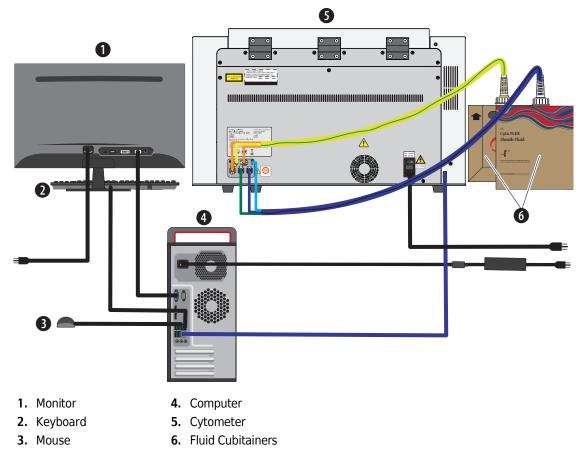

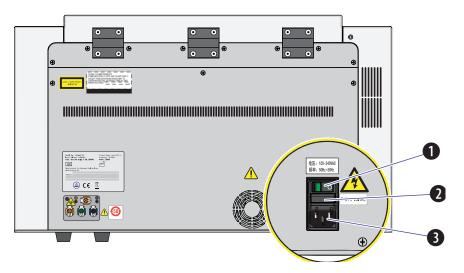

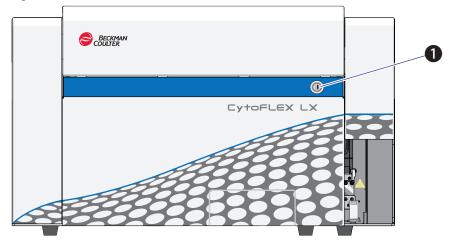

Figure 1.26 Back Cover Connections

- 1. Power switch. Turns Cytometer on and off. An indicator light glows when the power is on.
- 2. Fuse. Protects the internal system from damage by high electrical current.
- 3. Power line socket. Supplies the power to the Cytometer.

Figure 1.27 Front of Cytometer

1. Load button. In addition to the software controls, this button can be used for automatic sample loading and data recording.

NOTE This function is not available in the Plate Loader sample injection mode.

Consumables and Supplies

Reagents

The following reagents are available for the CytoFLEX, CytoFLEX S and CytoFLEX LX instrument:

CytoFLEX Ready to Use Daily QC Fluorospheres

The CytoFLEX Ready to Use Daily QC Fluorospheres are a ready to use formulation of fluorospheres that are used for QC standardization on the CytoFLEX Platform.

CytoFLEX Daily QC Fluorospheres

The CytoFLEX Daily QC Fluorospheres is a suspension of fluorescent microspheres which may be used for daily verification of the CytoFLEX flow cytometer's optical alignment and fluidics system.

NOTE Not for daily verification of the IR laser QC.

CytoFLEX Sheath Fluid

A nonionic, non-fluorescent, anti-microbial and azide-free sheath fluid for use on Beckman Coulter CytoFLEX flow cytometers.

Contrad 70 Reagent

Diluted 1:1 with DI water for use in the Deep Clean solution bottle.

FlowClean

For use during Daily Clean procedure for cleaning the sample lines.

The following reagents are available for the IR laser QC:

CytoFLEX Daily IR QC Fluorospheres

The CytoFLEX Daily IR QC Fluorospheres is a suspension of fluorescent microspheres which may only be used for daily verification of the CytoFLEX flow cytometer's Infrared optical alignment.

Ordering Information

Your instrument may be upgraded to a more highly configured model. For information on specific upgrades, replacement parts, or supplies, visit:

Otherwise, contact us.

Instrument Specifications

Dimensions [CytoFLEX and CytoFLEX S]

Dimensions		
Instrument dimensions (Length x Width x Height)	Cytometer [With or Without Plate Loader]	42.5 cm x 42.5 cm x 34 cm
	Fluid Containers and Fluid Container holder	14 cm x 35.6 cm x 35.6 cm
Weight	Cytometer [Without Plate Loader]	23.4 kg
	Cytometer [With Standard Plate Loader]	28 kg
	Cytometer [With Plate Loader DW]	28.4 kg

Refer to Figure 1.28 for the [CytoFLEX and CytoFLEX S] Plate Loader DW dimensions.

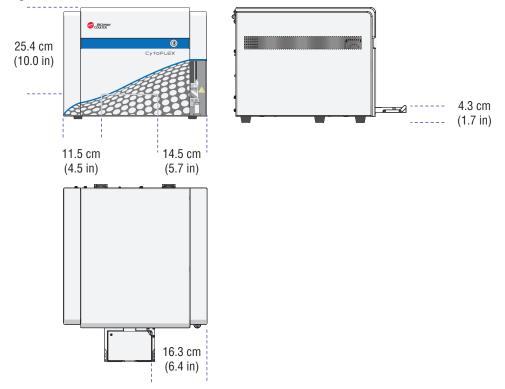

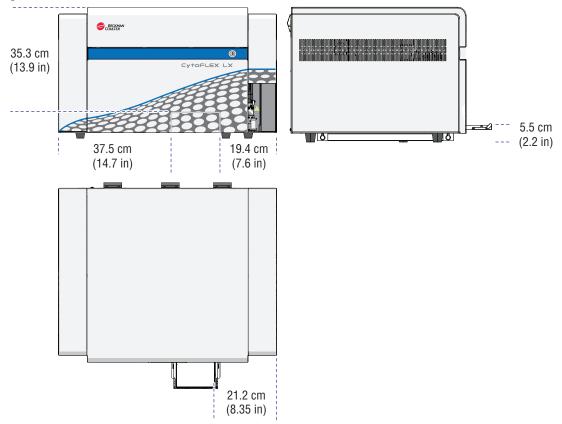

Figure 1.28 Plate Loader DW Dimensions [CytoFLEX and CytoFLEX S]

Dimensions [CytoFLEX LX]

Dimensions		
Instrument dimensions (Length x Width x Height)	Cytometer [With or Without Plate Loader]	73.3 cm x 60.5 cm x 45.1 cm
	Fluid Cubitainers	25 cm x 25 cm x25 cm
Weight	Cytometer [Without Plate Loader]	79 kg
	Cytometer [With Standard Plate Loader]	83.6 kg
	Cytometer [With Plate Loader DW]	84 kg

Refer to Figure 1.29 for the [CytoFLEX LX] Plate Loader DW dimensions.

Installation Category

Installation Category 2

Do not operate at an altitude greater than 2000 m (6561 ft). Beckman Coulter assumes no responsibility for any problems resulting from operating instrument at an altitude greater than 2000 m (6561 ft).

Pollution Degree

Pollution Degree 2

Acoustic Noise Level

Measure Level: <65 dBA

Electrical Ratings

Voltage: 100-240 VAC, 50/60 Hz, 250 VA

Cytometer

	Optics
Excitation optics	The optical system is alignment free. The laser delays are automatically adjusted by the daily QC system, if required. No user intervention is required to ensure optimum system performance.
	CytoFLEX : The system can be configured with up to three spatially-separated lasers.
	CytoFLEX S : The system can be configured with up to four spatially-separated lasers.
	CytoFLEX LX : The system can be configured with up to six spatially-separated lasers.
Emission optics	Patent-pending alignment-free integrated optics quartz flow cell design with >1.3 NA.
	Flow Cell dimensions: 430 μ m x 180 μ m internal diameter.

1

	Optics		
Laser devices	Standard wavelengths	Blue laser	
		• Wavelength: 488 nm, 50 mW	
		 Beam spot size: 5 μm x 80 μm 	
		Red laser	
		• Wavelength: 638 nm, 50 mW	
		 Beam spot size: 5 μm x 80 μm 	
		Violet laser	
		• Wavelength: 405 nm, 80 mW	
		 Beam spot size: 5 μm x 80 μm 	
	Additional standard	Yellow laser	
	wavelengths	• Wavelength: 561 nm, 30 mW	
	[CytoFLEX S or CytoFLEX LX]	 Beam spot size: 5 μm x 80 μm 	
		Ultraviolet (UV) laser	
		• Wavelength: 355 nm, 20 mW	
		 Beam spot size: 5 μm x 80 μm 	
		Near Ultraviolet (NUV) laser	
		• Wavelength: 375 nm, 60 mW	
		 Beam spot size: 5 μm x 80 μm 	
		Infrared (IR) laser	
		• Wavelength: 808 nm, 60 mW	
		 Beam spot size: 5 μm x 80 μm 	
Forward scatter detection	Silicon photodiode with built-in 488/8 band-pass filter.		
Fluorescence and side scatter detection	Fluorescence and side scatter light collected by the objective lens is delivered by fiber optics to a patent-pending design with high performance, solid-state, high efficiency, low-noise detector array.		
	Reflective optics with a si	ngle transmission band-pass filter in front of each detector.	
Violet side scatter configuration (VSSC)	The system offers the ability to configure the violet laser WDM to collect side scatter to better resolve nanoparticles from noise.		

Fluidics System		
Sample flow rates	Fixed Flow Rates: 10 µL/min, 30 µL/min, 60 µL/min	
	Custom Flow Rates: 10-240 µL/min in 1 µL increments	
Fluid capacity	CytoFLEX and CytoFLEX S: Standard 4 L sheath fluid and waste containers; Optional 10 L sheath fluid and waste cubitainers	
	CytoFLEX LX: Standard 10 L sheath fluid and waste cubitainers	
Automated maintenance cycles	Initialize, system startup program, sample mix, backflush, prime, Daily Clean, Deep Clean	

Fluidics System		
Sample input formats	Single Tube Loader format5 mL (12 x 75 mm) polystyrene and polypropylene sample tubes	
		1.5 mL and 2 mL micro-centrifuge sample tubes
Dead Volume	10 μL	
Minimum Sample Volume	100 μL	

Fluidics System [With Standard Plate Loader]			
Sample input formats	Plate format Flat/U/V bottom standard 96-well plate		
Dead volume	96-well flat bottom plate	20 μL	
	96-well U bottom plate	10 μL	
	96-well V bottom plate	10 μL	
Minimum sample volume	45 μL/well		
Maximum sample volume	250 μL/well		

Fluidics System [With Plate Loader DW] ^a		
Sample input formats	Plate format	96-well deep well plate;
		Flat/U/V bottom standard 96-well plate
Dead volume	96-well deep well plate	20 μL
	Flat bottom standard 96-well plate	20 μL
	U/V bottom standard 96-well plate	10 μL
Minimum sample	Standard 96-well plate: 50 µL/well	
volume	Deep well plate: 200 μL/well ^b	
Maximum sample volume	Refer to the related specification of the deep well plates.	

a. The 96-well deep well plates are only available for use if the Plate Loader DW is installed. The information below is based on the deep well plates manufactured by Beckman Coulter. Refer to APPENDIX D, Deep Well Plate .

b. To mix sample thoroughly, it is recommended to add at least 200 μL sample per well for one time.

Electronics		
Signal processing 7 decade data display		
Digital sampling rate 25 MHz		
Signal	Pulse area and height for every channel, width for one selectable channel	

Data Management

		tion Library for storage of spillover values of dyes to easily rrect compensation matrix with new gain settings.

Performance Characteristics

Performance Characteristics [CytoFLEX and CytoFLEX S]

Performance		
Sensitivity	MESF	FITC: <30 molecules of equivalent soluble fluorochrome (MESF-FITC)
		PE: <10 molecules of equivalent soluble fluorochrome (MESF-PE)
		APC: <25 molecules of equivalent soluble fluorochrome (MESF-APC)
Fluorescence	rCV <3%	
resolution	The CytoFLEX Flow cytometer is capable of achieving <3% rCV. Using CytoFLEX Daily QC Fluorospheres, CytoFLEX Ready to Use Daily QC Fluorospheres or Daily IR QC Fluorospheres (for 808 nm Laser) for daily QC, the pass criteria is \leq 5% for the Violet, Blue, Yellow, and Red lasers while the pass criteria is \leq 7% for NUV, and IR lasers.	
Blue side scatter resolution	<300 nm	

I

I

Performance		
Violet side scatter resolution	80 nm relative to polystyrene particles	
Forward and side scatter resolution	Scatter performance is optimized for resolving lymphocytes, monocytes, and granulocytes as well as nanoparticles.	
Carryover	Single Tube Loader format	≤1.0%
Signal acquisition speed	30,000 particles/second with 15 parameters	

Performance [With Standard Plate Loader]					
Carryover	Plate Loader format ≤1.0%				
Throughput [With	10 second acquisition without mixing or backflush: <32 min.				
Plate Loader] ^a	10 second acquisition with 3 second mixing and 3 second backflush: <45 min.				

a. This performance characteristic is different if you have the Sample Injection Mode Control Kit installed on your CytoFLEX cytometer. Refer to APPENDIX C, Sample Injection Mode Control Kit.

Performance [With Plate Loader DW]						
Carryover	Plate Loader format	≤1.0%				
Throughput [With Plate Loader DW] ^a	Standard 96-well plate, 10 second acquisition without mixing or backflush: <36 min.					
	Deep-well 96-well plate, 10 second acquisition without mixing or backflush: <37 min					
	Standard 96-well plate, 10 second acquisition with 5 second mixing and 4 second backflush: <54 min.					
	Deep-well 96-well plate, 10 second acquisition with 10 second mixing and 4 second backflush: <64 min.					

a. The Plate Loader DW is equipped with the Sample Injection Mode Control Kit. Refer to APPENDIX C, Sample Injection Mode Control Kit.

Performance Characteristics [CytoFLEX LX]

Performance				
Sensitivity	MESF	FITC: <30 molecules of equivalent soluble fluorochrome (MESF-FITC)		
	PE: <10 molecules of equivalent soluble fluorochr (MESF-PE)			
		APC: <25 molecules of equivalent soluble fluorochrome (MESF-APC)		
Fluorescence resolution	rCV <3%			
	The CytoFLEX LX Flow cytometer is capable of achieving <3% rCV. Using CytoFLEX Daily QC Fluorospheres, CytoFLEX Ready to Use Daily QC Fluorospheres, or Daily IR QC Fluorospheres (for 808 nm Laser) for daily QC, the pass criteria is \leq 5% for the Violet, Blue, Yellow, and Red lasers while the pass criteria is \leq 7% for NUV, UV and IR lasers.			
Blue side scatter resolution	<300 nm			
Violet side scatter resolution	80 nm relative to	o polystyrene particles		
Forward and side scatter resolution	Scatter performance is optimized for resolving lymphocytes, monocytes, and granulocytes as well as nanoparticles.			
Carryover	Single Tube Loader format	≤1.0%		
Signal acquisition speed	30,000 particles,	/second with 23 parameters		

Performance [With Standard Plate Loader]						
Carryover	Plate Loader format	≤1.0%				
Throughput [With	10 second acquisition without mixing or backflush: <34 min.					
Standard Plate Loader] ^a	10 second acquisition with 3 second mixing and 3 second backflush: < 47 min					

a. This performance characteristic is different if you have the Sample Injection Mode Control Kit installed on your CytoFLEX LX flow cytometer. Refer to APPENDIX C, Sample Injection Mode Control Kit.

Performance [With Plate Loader DW]						
Carryover	Plate Loader format	≤1.0%				
Throughput [With Plate Loader DW] ^a	Standard 96-well plate, 10 second acquisition without mixing or backflush: <39 min.					
	Deep-well 96-well plate, 10 second acquisition without mixing or backflush: <40 min					
	Standard 96-well plate, 10 second acquisition with 5 second mixing and 6 secon backflush: <60 min.					
	Deep-well 96-well plate, 10 second acquisition with 10 second mixing and 6 second backflush: <69 min.					

a. The Plate Loader DW is equipped with the Sample Injection Mode Control Kit. Refer to APPENDIX C, Sample Injection Mode Control Kit.

Reagent Limitations

- Only use nonionic sheath fluid with antimicrobial, like CytoFLEX Sheath Fluid. Do not use sheath fluid containing electrolytes.
- Do not use organic solvents in the system.

Material Safety Data Sheets (SDS/MSDS)

To obtain an SDS or MSDS for CytoFLEX Platform reagents used on the CytoFLEX Platform systems:

- On the Internet, go to www.beckman.com:
 - 1. Select Safety Data Sheets (SDS/MSDS) from the Support menu.
 - 2. Follow the instructions on the screen.
 - **3.** Contact us if you have difficulty locating the information.
- If you do not have Internet access, contact us.

CHAPTER 2 Using the CytExpert Software

Overview

The CytExpert software is a full-feature software package that controls the instrument operation, collection of experiment data, and analysis of the results. This chapter will explain the software functions and features.

This chapter contains information on:

- Launching the Software
- Main Software Screen
- **User Management**
- **Role Management**
- **Account Policies**
- User Management Operation Log
- Graphic and Gating Styles
- Software Settings

Launching the Software

Select the desktop shortcut with the CytExpert software.

If there is no desktop shortcut, run the "CytExpert.exe" software directly from the software installation directory. The default installation path is C:/Program Files/CytExpert. Or, select

> All Programs > CytExpert.

Refer to CHAPTER 4, Logging into the Software, for detailed instructions on opening the software and confirming the connection status.

Main Software Screen

Hover your cursor over any button to display a text pop-up of the button's function.

Start Page

The start page automatically opens after the software has been launched.

The following operations can be selected from the start page:

New Exp	eriment		Open Experiment	Exit
	eriment from mpensation	n Template	Open Compensation	
kperiment	Template	Compensation		
<u>C:\Users\r</u>	nhan03\Doci	uments\CytExpe	rt Data\2.5 Experiment\Exp_20	2 <u>11117_1.xit</u>

- **New Experiment**. For creating a new experiment. The process creates a file with the .xit extension and a folder with the same file name where the raw data (.fcs files) are kept.
- **New Experiment from Template**. For creating an experiment using a template saved from a previously saved experiment.
- **New Compensation.** For creating a new compensation experiment.
- **Open Experiment.** For opening a previously created experiment.
- **Open Compensation.** For opening a previously created compensation experiment.
- **Exit.** For exiting CytExpert.

The Experiment, Template, and Compensation tabs below give you the option of opening one of the 10 most recently opened experiments.

Acquisition Screen

Selecting New Experiment, New Experiment from Template, or Open Experiment automatically opens

the Acquisition screen. The Acquisition screen can be accessed by selecting on the left side of the page.

Events 0 Events 0 Time: 000000 Events to Dipday: 1000 Events to Record: 1000 Winet to Record: 000 Vineto Record: 000 Vineto Record: 000 Sample Flow Retre: 1/4	A L + 46 65 77 t2 000 000 000 100 00 100 100 00		00 FSC-A (x1 55 Parent	Image: Constraint of the second se	e iz z r	S. - 1. Navigation. Gives the option of accessing the Acquisition screen or Analysis screen.
- 2. Menu. Allows you to configure settings for sample acquisition, instrument operation, and software options.
- **3.** Instrument operation controls. Controls sample loading/unloading and data acquisition and recording.
- **4. Collection.** Establishes control over data recording options, displays the acquisition status, and controls the sample flow rate.
- 5. Test tubes. Allows you to configure and duplicate sample tubes, set display attributes, manage experimental data and compensation.

NOTE The Tube section of the screen can be expanded or retracted by dragging the top border of the Tube section of the screen. Expanding this section covers other elements of the screen, including: Events to Display, Events/Sec, and the Acquisition buttons.

- 6. Plot area. Includes plot and gating controls, as well as an area for creating plots and generating graphs.
- 7. Status bar. Displays instrument connection status and system information.

Acquisition Screen Navigation

The Acquisition screens have two navigation icons, one for the Acquisition screen and the other for the Analysis screen.

- 1. Acquisition screen icon. Accesses the Acquisition screen.
- 2. Analysis screen icon. Accesses the Analysis screen.

- 1. Acquisition control. Controls sample loading/unloading and data acquisition and recording.
- 2. Acquisition status. Displays such information as the acquisition rate (Events/Sec), event count, duration, and abort (%).
- 3. Acquisition conditions. Sets the necessary conditions for recording data.
- 4. Sample flow rate. Sets the acquisition rate for data collection.

NOTE High acquisition rate may increase the abort rate and measurement CVs. Custom: The flow rate can be adjusted in 1 µL increments.

Initialized state

Standby state

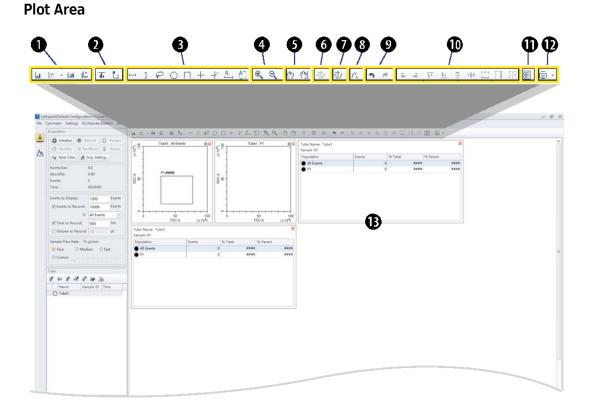

- 1. Acquisition control. Controls sample loading/unloading and data acquisition and recording.
- 2. Acquisition status. Displays such information as the acquisition rate (Events/Sec), event count, duration, and abort (%).
- 3. Acquisition conditions. Sets the necessary conditions for recording data.
- 4. Sample flow rate. Sets the acquisition rate for data collection.

NOTE High acquisition rate may increase the abort rate and measurement CVs.

Test Tubes

- 1. Tube management controls. Manages sample tubes. Used to add, copy, or delete attributes, open the tube property, and open the compensation matrix.
- 2. Test tube status indication. Displays a colored symbol in front of each tube indicating the status of the tube processing.
 - O indicates that the tube data was not collected.
 - Indicates that the tube data was acquired by selecting Run but can be overwritten.
 - O indicates that the tube data was saved by selecting **Record** or **Auto Record** and that this data cannot be overwritten.
 - (E) indicates imported FCS data.
 - **NOTE** I to the left of the test tube status indication symbol indicates that the sample has been compensated.
 - Indicates the data file is missing or there is an error in the data file.
- **3.** Test tube list. Displays the sample tubes used in the experiment. Right-click a tube in the list to perform additional operations.
 - **NOTE** In the Plate Loader Sample Injection mode the well number displays at the end of the tube name.

- 1. Plot controls. For creating single or multiple plots, such as dot plots, histograms, density plots, pseudo color plots, and contour plots.
- 2. Statistics and hierarchy controls. For creating statistical and hierarchical charts.
- 3. Graphical gating controls. For creating graphical gates.
- 4. Zoom controls. For zooming in and out within a plot.
- 5. Pan axis display controls. For scaling axis ranges in the plots.
- 6. Gain adjustment control. For increasing and lowering gain adjustments on the plots.

NOTE The gain adjustment control only works when a sample is running.

- **7.** Adjust compensation control. For adjusting compensation of either of the parameters on a 2D histogram.
- 8. Threshold control. For setting the minimum particle size limit, scatter value, or fluorescence intensity that acquisition will allow.
- 9. Undo and redo controls. For undoing or redoing an action in the drawing area.
- 10. Display controls. For controlling how plots and tables are aligned and arranged.
- 11. Rearrange. For restoring the plots to the default positions.
- 12. Printing controls. For printing and previewing the plot area.
- 13. Plot area. For creating plots and displaying statistics and hierarchy tables.

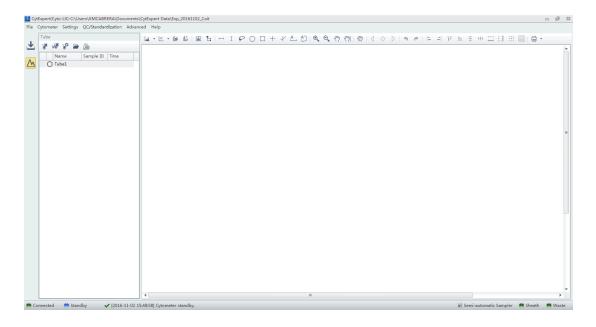

- 1. Communication connection status. Displays whether the Cytometer and the Workstation are connected.
- 2. Instrument status information. Displays the status of the Cytometer.
- 3. Laser status. Displays the status of each laser.

NOTE The laser status only displays when a required laser is disabled.

- **4. Sampler status.** Displays the sample injection mode state. There are two sample injection modes: Semi-automatic sample injection mode and manual sample injection mode.
 - **NOTE** CytoFLEX Cytometers equipped with a plate loader have three sample injection modes: Semi-automatic sample injection mode, manual sample injection mode, and plate loader sample injection mode.
- 5. Fluid status information. Displays the liquid level of the Fluid Containers/Cubitainers.

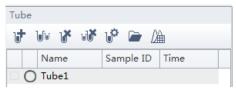

Analysis Screen

The Analysis screen is similar to the Acquisition screen, without the acquisition control modules.

The Tube management module cannot add new sample tubes. Return to the Acquisition screen to add new sample tubes.

Tube Management

Drawing controls (see Figure 2.1) include the multi-data histograms and graphical display data controls.

Figure 2.1 Drawing Controls Toolbar (Top of Screen)

Gates		Compensation			

Compensation Experiment Screen

The Compensation Experiment screen appears when you open or create a new compensation experiment.

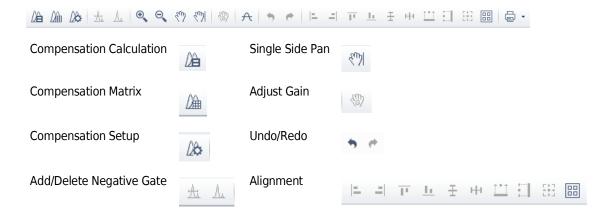

- 1. Tube management. Displays sample tubes required for the compensation experiment.
- 2. Plot area. Displays compensation plots and gating.

The Tube management section of the screen can import saved data (.fcs) files for computational purposes.

Compensation Controls

The control area includes the compensation controls, coordinate pan axis display controls, gain adjustment controls, and the undo and redo controls. The compensation controls give you the option of calculating the compensation value, displaying the compensation matrix, or changing the compensation parameters.

- 1. Menu. Allows you to configure settings related to QC experiments.
- 2. Acquisition control. Controls sample loading/unloading and data recording.
- 3. Lot selection. Allows you to select the lot number of the QC reagent.
- 4. QC results list area. Displays the time and results of completed QC runs.
- 5. QC reports area. Displays detailed reports for the selected QC experiment.

QC Experiment Screen

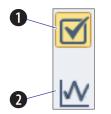

When acquiring QC samples, the software opens the QC screen.

- 1. QC experiment progress indicator. Displays the QC stage.
- 2. Plot area. Displays the QC plots.

QC Screen Navigation

The Analysis screens have two navigation icons, one for the QC screen and the other for the Levey-Jennings (LJ) charts. Refer to CHAPTER 5, Creating Levey-Jennings Charts.

- 1. QC screen icon. Accesses the QC screen.
- 2. LJ screen icon. Accesses the Levey-Jennings (LJ) screen.

Software Menu

IMPORTANT All menu items apply to the CytExpert Default software option unless otherwise specified.

The CytExpert software contains the following selectable menu items:

Figure 2.3 Software Menu Tree*

- 1. Search text box: Filters users by username and 6. Unlock: Used to unlock an existing account that display name.
- 2. View drop-down: Toggles between Card View (see Figure 2.5) and Grid View (see Figure 2.6).
- 3. New: Used to create a new user profile.
- 4. Modify: Used to modify an existing user profile.
- 5. Delete: Used to delete an existing user profile.
- has been locked.
 - NOTE An account locks after 3 failed password attempts. The number of attempts can be changed by the administrator. Refer to Account Policies.
 - **NOTE** An account automatically unlocks after 30 minutes. The duration can be changed by the administrator. Refer to Account Policies.
- 7. Reset password: Used to reset an existing user password to the default password: password.
- 8. Close: Closes the User Manager window.

Creating, Deleting, and Modifying Users in User Manager

Creating a New User in User Manager

1 Select New... in the User Manager window. The New window appears.

New		23
	Username:	
	Full Name:	
25	Password:	password
	Role:	Operator 🔹
	Enabled:	
		OK Cancel

- **2** Fill in the new user information.
 - **a.** Enter the Username.
 - **b.** Enter the Full Name.
 - **c.** Select the user Role.
 - **d.** Select the Enabled checkbox to enable the user.

NOTE The Enabled checkbox can only be changed by an administrator.

- **3** Select OK. The new user displays in User Manager.
- 4 Select Close

Deleting Users in User Manager

- **IMPORTANT** If an account has been used and log information has been generated related to it, the account cannot be deleted, but it can be disabled.
- 1 Select the user to be deleted in the User Manager window then select Delete

NOTE The user 'Admin' is a system default user and cannot be deleted.

2 Select Close

Modifying Users in User Manager

- **IMPORTANT** If an account has been used and log information has been generated related to it, the username cannot be modified.
- 1 Select Modify in the User Manager window. The Modify window appears.

Modify			23
	Username:	Sarah	
	Full Name:	Sarah L.	
25	Role:	Operator	-
	Enabled:		
		OK Cancel	

NOTE The user 'Admin' is a system default user and cannot be modified.

2 Modify the user information as necessary.

NOTE Uncheck the enabled box to disable a user.

3	Select OK.
4	Select Close .

Unlocking a User Account

Select a Locked user in the User Manager window and select Unlock.

NOTE You cannot unlock an active user.

Resetting a User Passwords

Select a user in the User Manager window then select **Reset Password**. The user password is automatically reset as *password*.

Changing a User Password

1 Select **Account > Change Password**. The Change Password window appears.

Change Password	22
Username:	Admin
Old Password:	
New Password:	
Confirm New Password:	
	OK Cancel

2 Enter the current password, the new password, and confirm the new password.

З Select ок

Role Management

IMPORTANT Only an Administrator can manage users. You must have either the CytExpert User Management or CytExpert Electronic Record Management software option installed to use this feature. Refer to APPENDIX A, CytExpert Software Installation Options.

Role Management is used to manage user account permissions.

NOTE Multiple users can be applied to the same role.

Select Account > Role Manager. The Role Manager window appears. Refer to Figure 2.7.

- **2** Enter the filter conditions: User and Time Range.
- **3** To export the log, select **Print & Export...** .
 - **NOTE** User logs are exported as a .pdf or .csv file.

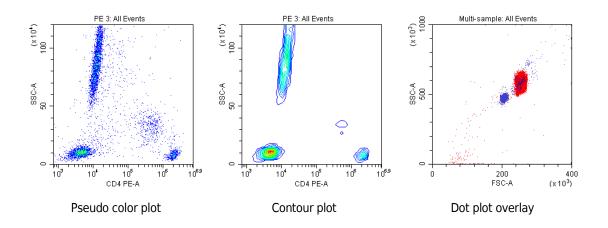

Graphic and Gating Styles

Plots

The CytExpert software offers a variety of plot formats including:

- Single-parameter plots and histogram overlays
- Dual-parameter plots: dot plots, density plots, pseudo color plots, contour plots, and dot plot overlays
 - **NOTE** Histogram Overlays and Dot Plot Overlays can only be created from multiple samples in the Analysis screen. A maximum of 10 samples can be overlaid.

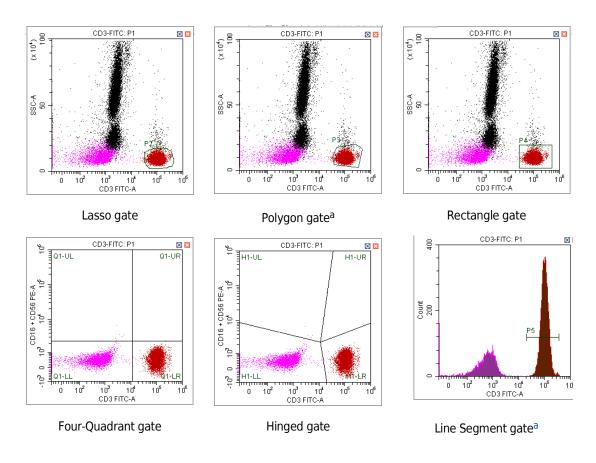

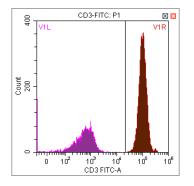

Gates

Various gating choices are available.

The software includes the following gate types:

- For dual-parameter plots: lasso, polygon, rectangle, four-quadrant, hinged gates, and auto polygon
- For single-parameter plots: line-segment, vertical gates, and auto line segment

Vertical gate

a. This gate can be created using the autogate functionality. Refer to CHAPTER 6, Creating and Adjusting Auto Gates.

Plate Type Library

The Plate Type Library is used to manage and calibrate plates. Plates can be added, deleted, duplicated, and edited from the Plate Type Library. To calibrate a plate, refer to CHAPTER 12, Calibrating the Plate Position [With Plate Loader].

Select Advanced > Plate Type Library to access the Plate Type Library. Refer to Figure 2.11.

Active	Name	Plate Mode	Last Calibration Time	Default
1	96-well flat-bottom	Standard	-	0
1	96-well V-bottom	Standard	•	0
1	96-well U-bottom	Standard	-	0
1	96-well deep well	Deep Well	-	0

Figure 2.11 Plate Type Library

1. Active. Indicates that the plate type is available for use.

- 2. Default. Applies the default settings.
- **3.** Add. Creates a new plate.
- **5. Duplicate.** Duplicates a plate.
- 6. Delete. Deletes an existing plate.
- 7. OK. Saves the plate type.
 - 8. Cancel. Cancels the settings.

4. Edit. Edits a plate.

Adding a Plate Type

- Select U Standby
- 2 Select Advanced > Plate Type Library. The Plate Type Library window appears.

Active	Name	Plate Mode	Last Calibration Time	Default
1	96-well flat-bottom	Standard	-	0
1	96-well V-bottom	Standard	-	0
\checkmark	96-well U-bottom	Standard	-	0
1	96-well deep well	Deep Well	-	0

3 Select **Add**. The Add Plate Type window appears.

Add Plate Type				23

Setting Up CytExpert Application Programming Interface (API) Test Client

The CytExpert API is available for external software to control CytoFLEX Platform. It allows external software to perform operations such as running methods and allows for basic control of the plate loader. It is also possible to report population statistics as each sample finishes. Contact us to request a copy of the CytExpert API Instructions for Use manual.

Operation Principles

Overview

This chapter explains how the Cytometer measures scattered light and fluorescence as cells pass through the laser beam.

The illustrations in this chapter are not exact representations of the inside of the Cytometer. They are for explanatory purposes only.

This chapter contains information on:

- Sample Flow
- Laser Beam Shaping
- Cell Illumination
- Light Collection, Separation and Measurement
- Signal Processing
- Data Storage
- Automated Software Features
- Parameters
- Plot Display
- Statistics

Sample Flow

<u>/!</u> CAUTION

Possible flow cell damage. To avoid clogging the sample probe, sample tubing or flow cell, ensure that 12 x 75 mm test tubes are free of debris before you use them.

Sample Loading

The system supports two ways to load sample, by sampler module (for single tube) or by plate loader (for 96-well plates).

The sampler module includes three stepper motors. A 12 VDC stepper motor (sample tube loader motor) at the bottom of the module moves (swings) the sample tube holder in/out. A 12 VDC stepper motor (sample tube lifter motor) at the top of the module moves the sample tube holder up/down, using a toothed belt. An additional 12 VDC stepper motor at the top of the module

(sample peristaltic pump motor) moves the sample peristaltic pump to achieve liquid flow. Refer to Figure 1.12. The sampler module handles a sample tube as follows:

- It swings the tube holder out for loading.
- It swings the tube holder in and lifts the tube holder.
- The sample probe rates to mix the sample.
- The sample peristaltic pump starts to aspirate the sample. Sample flow begins.

The plate loader module is installed in the inner compartment of the Cytometer, as shown in Figure 1.13 and Figure 1.14. The plate module includes three movement modules.

- The Y-Axis movement module ejects or retracts the plate holder stage.
- The X-Axis movement module moves the probe from left to right across the plate to position the plate loader sample probe over all of the possible columns in the well plate.
- The vertical movement module supports and moves the plate loader wash station assembly up and down as needed to mix a sample in a well, aspirate a sample from a well, and clean the plate sample probe.

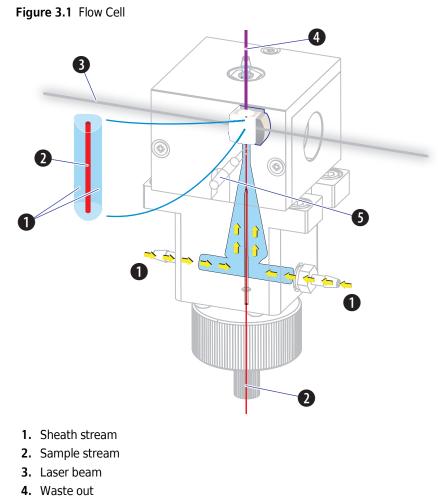

The sample probe is cleaned automatically when sample flow ends.

Hydrodynamic Focusing

The instrument uses a process called hydrodynamic focusing to ensure that the cells move through the laser beam one at a time, along the same path through the flow cell.

The flow cell (Figure 3.1) contains a rectangular channel. A pressurized stream of sheath fluid enters the channel at the lower end and flows upward. The sensing area of the flow cell is at the center of the channel.

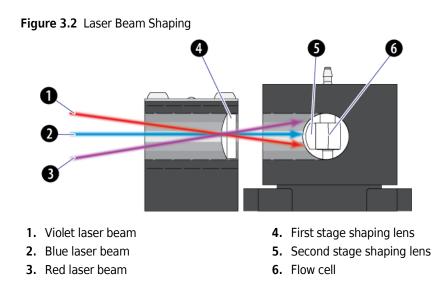

While the sheath stream is flowing through the channel, a stream of sample is injected into the middle of the sheath stream. As shown in Figure 3.1, the sheath stream surrounds, but does not mix with, the sample stream. The pressure of the sheath stream focuses the sample stream so that the cells flow through the laser beam single file. If the cells were to move through the laser beam in different ways during sample flow, sample analysis could be distorted.

5. Purge port (Waste)

Laser Beam Shaping

Before the laser beam reaches the sample stream, lenses focus the beam (see Figure 3.2). Focusing keeps the beam perpendicular to the sample stream flow while making the beam small enough to illuminate only one cell at a time.

Cell Illumination

As cells in the sample stream go through the sensing area of the flow cell, the elliptical beam illuminates them. The cells scatter the laser light and emit fluorescent light from autofluorescence and the fluorescent dyes attached to them.

Forward Scatter

The amount of laser light scattered at narrow angles to the axis of the laser beam is called forward scatter (FS). The amount of FS is proportional to the size of the cell that scattered the laser light.

Side Scatter and Fluorescent Light

The amount of laser light scattered at about a 90° angle to the axis of the laser beam is called side scatter (SS). The amount of SS is proportional to the granularity of the cell that scattered the laser light. For example, SS is used to differentiate between lymphocytes, monocytes, and granulocytes.

In addition to the SS, the cells emit fluorescent light (FL) at all angles to the axis of the laser beam. The instrument measures the amount of FL emitted by cells depending on the reagents used. For example, FL above the background FL is used to identify molecules, such as cell surface antigens.

Light Collection, Separation and Measurement

Forward Scatter Collection

The FALS (Forward Angle Light Scatter) detector collects scattered light from a particle that intersects with a laser and delivers information roughly proportional to the size of the particle. The

forward angle light is filtered with a 488 nm band pass before it reaches the FS sensor which generates voltage pulse signals. These signals are proportional to the amount of light the sensor receives.

Side Scatter and Fluorescent Light Collection

Both side scatter and fluorescence are measured 90 degrees from the laser axis.

Side Scatter

The wavelength of SS is 488 nm. It is much more intense than FL.

Side scatter light collected by the objective lens is delivered by fiber optics to a patent-pending design with high performance, solid-state, high efficiency, and low-noise detector arrays.

Fluorescent Light

Fluorescence and scattered light are transmitted by optical fibers to the Wavelength division multiplexer (WDM). Each WDM is a unique detector array that corresponds to a different laser. Refer to CHAPTER 1, Wavelength Division Multiplexer (WDM). Each WDM contains optical filters and detectors for detecting channel fluorescence or scatter from a particular laser. It is necessary to ensure that the filter and software settings match for each channel.

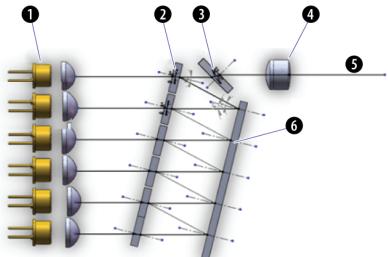

Figure 3.3 Light Path through the WDM with a Single Port

- 1. Fiber array photo detectors (FAPD)
- 2. Filter
- **3.** 45-degree reflector
- 4. Doublet lens
- 5. Light path
- 6. Mirror

Signal Processing

The CytoFLEX is a fully digital system with an active range of 7 logarithmic decades, signal collection speed of 30,000 events/second (includes 15 parameters).

Data Storage

<u>A</u> CAUTION

The instrument Workstation is vulnerable to malware, viruses, data corruption, and unauthorized instrument setting changes, or privacy breaches if unauthorized access is gained by malicious personnel. To reduce the risk of such events, only allow authorized laboratory personnel access to the instrument Workstation. Contact your institutional security department for assistance.

The instrument Workstation is vulnerable to malware and viruses from physical media such as CDs, DVDs, or USB drives. To reduce the risk of data corruption or unauthorized setting changes, only use physical media such as CDs, DVDs, or USB drives that are known to be free from viruses or malware. Contact your IT professional for assistance.

<u>A</u> CAUTION

The instrument Workstation is vulnerable to malware, viruses, and unauthorized access if connected to a network without using the PROService RMS hardware available from Beckman Coulter. To reduce the risk of data corruption, unauthorized instrument setting changes, or privacy breaches, only connect the instrument Workstation to a network via the PROService RMS hardware. Contact us to obtain PROService.

Sample results can be printed out, saved to removable media, saved to a local hard drive or saved to a network drive. You can store sample results in Flow Cytometry Standard (FCS 3.0) files.

Automated Software Features

CytExpert for CytoFLEX software contains the following automated software features.

- Auto Delay. The system reads and automatically adjusts laser delay during QC. You can also read the laser delay value while acquiring samples.
- **Auto Threshold**. Easily find target populations. No need to worry about the threshold setting while adjusting gains when auto threshold is enabled.

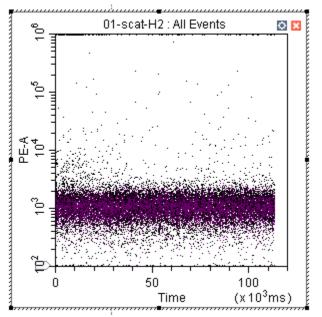

• **Auto Gating**. There are two types of autogates available in the CytExpert for CytoFLEX software: auto line segment and auto polygon.

Parameters

TIME Parameter

The TIME parameter is the amount of time, in seconds, the instrument acquires data. It is displayed on the plot. The axis labels vary, depending on plot resolution and stop time (duration) if **Fit with sample** is selected.

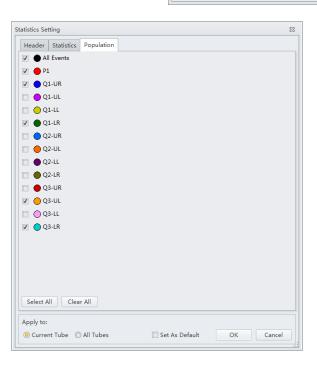

Plot Display

The results of sample analysis appear on the Workstation screen as graphs called plots. Refer to CHAPTER 2, Graphic and Gating Styles.

Statistics

The Statistics Setting window allows you to change the display of the header, statistical elements and cell populations included.

CHAPTER 4 Daily Startup

Overview

IMPORTANT Verify that the correct USB configuration key is securely connected to a computer USB port. If the USB configuration key is not connected, the following error message appears: *CytExpert cannot find the license. Please check whether the correct USB configuration key has been plugged in.*

This chapter describes the instrument startup procedure.

Workflow:

Pre-startup →	Turn on power	→	Open software	→	Initialize instrument
---------------	---------------	---	---------------	---	-----------------------

This chapter contains information on:

- Pre-Startup Inspection
- Turning On the Instrument
- Logging into the Software
- Initializing the Instrument

Pre-Startup Inspection

Before using the CytoFLEX platform flow cytometer, perform the following system checks.

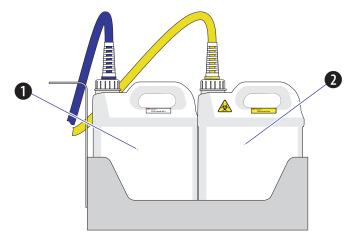

Checking Waste and Reagent Levels [4 L Fluid Containers]

Risk of instrument damage. Do not use a saline-based sheath fluid on the CytoFLEX instrument. Saline-based sheath fluid could damage instrument components. Beckman Coulter recommends using CytoFLEX Sheath Fluid or a similar nonionic sheath fluid to ensure system performance.

1 Examine the sheath fluid and waste containers. Verify that there is sufficient sheath fluid in the sheath fluid container and that the waste container is empty.

NOTE When the sheath fluid container is near empty or the waste container is near full, a warning message is transmitted to the Workstation and audible signals sound as a warning.

- 1. Sheath fluid container
- 2. Waste container

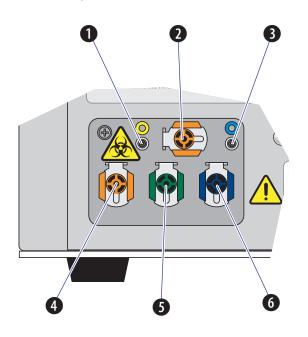

Risk of instrument damage. Remove the sheath fluid container from the Fluid Container holder before filling the sheath fluid container to avoid damage to instrument electronics.

2 If necessary, fill the sheath fluid container with CytoFLEX Sheath Fluid or a similar nonionic sheath fluid while not exceeding the maximum volume indicated (4 L). Refer to CHAPTER 12, Filling the 4 L Sheath Fluid Container.

🕂 WARNING

Risk of chemical injury from bleach. To avoid contact with the bleach, use barrier protection, including protective eyewear, gloves, and suitable laboratory attire. Refer to the Safety Data Sheet for details about chemical exposure before using the chemical.

- **3** If necessary, empty all waste liquid from the waste container. If biohazardous samples are used for data collection, add 400 mL of high-quality, fragrance-free, gel-free bleach (5 to 6% solution of sodium hypochlorite available chlorine) to the waste container. Refer to CHAPTER 12, Emptying the 4 L Waste Container.
- **4** Verify that the Fluid Containers and the Cytometer are on the same level.
- **5** Verify that all sheath fluid tubing, waste tubing, and sensor cables are properly connected, as shown in the figure:

- 1. Waste level sensor connector. Connects to the waste liquid sensor cable.
- 2. Flow cell waste out. Connects to the flow cell waste tubing.
- 3. Sheath fluid level sensor connector. Connects to the sheath fluid sensor cable.
- 4. Waste out. Connects to the waste liquid tubing.
- 5. Sheath return. Connects to the sheath fluid tubing.
- 6. Sheath fluid in. Connects to the sheath fluid tubing.

Checking Waste and Reagent Levels [10 L Fluid Cubitainers]

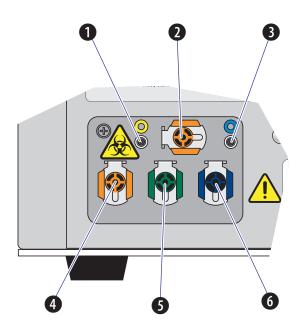

Risk of instrument damage. Do not use a saline-based sheath fluid on the CytoFLEX Platform instrument. Saline-based sheath fluid could damage instrument components. Beckman Coulter recommends using CytoFLEX Sheath Fluid or a similar nonionic sheath fluid to ensure system performance.

- 1 Examine the sheath fluid and waste cubitainers. Verify that there is sufficient sheath fluid in the sheath fluid container and that the waste container is empty.
 - **NOTE** When the sheath fluid container is near empty or the waste container is near full, a warning message is transmitted to the Workstation and audible signals sound as a warning.

- **2** Confirm that the instrument is in the standby state.
- **3** If necessary, replace the sheath fluid cubitainer with CytoFLEX Sheath Fluid or a similar nonionic sheath fluid. Refer to CHAPTER 12, Replacing the 10 L Sheath Fluid Cubitainer.
- **4** If necessary, empty all waste liquid from the waste container. Refer to CHAPTER 12, Emptying the 10 L Waste Cubitainer.
- **5** Verify that the Fluid Cubitainers and the Cytometer are on the same level.

6 Verify that all sheath fluid tubing, waste tubing, and sensor cables are properly connected, as shown in the figure:

- 1. Waste level sensor connector. Connects to the waste liquid sensor cable.
- 2. Flow cell waste out. Connects to the flow cell waste tubing.
- 3. Sheath fluid level sensor connector. Connects to the sheath fluid sensor cable.
- 4. Waste out. Connects to the waste liquid tubing.
- 5. Sheath return. Connects to the sheath fluid tubing.
- 6. Sheath fluid in. Connects to the sheath fluid tubing.

Power Source Inspection

Check the power cable located below the power switch on the back of the Cytometer, and verify it is securely connected to both the Cytometer and the power source.

Workstation Connections Inspection

Check that the monitor, mouse, keyboard, and the Cytometer are properly connected to the computer. Refer to Figure 1.22.

Turning On the Instrument

ACAUTION

- 1. If the Cytometer or Workstation fails to start properly, check first to see whether the power cable and connection cables are properly connected.
- 2. Never shut off the power or disconnect a data cable while the Cytometer is performing a task. Doing so can result in data loss or damage to the system.

1 Turn on the main power switch located on the back of the Cytometer.

2 Wait for the Cytometer to finish powering on, then turn on the Workstation.

Logging into the Software

1 Log in to the Windows operating system and double-click the CytExpert desktop icon open the software.

If you are running the CytExpert Default software installation, login is not required. Proceed to Step 4.

If you are running either the CytExpert User Management or the CytExpert Electronic Record Management software installation, the login window appears.

NOTE The default software shortcut appears on the desktop. If you do not see the icon, the default installation path is under C:/Program Files/CytExpert. Double-click CytExpert.exe to run the software.

2 Enter your username and password.

3 Select 🕨.

NOTE The display name of the user that is currently logged in displays in the top, right corner of the software screen.

- **4** Confirm that the software and the Cytometer are properly connected.
 - **a.** Open the software. The Startup screen appears.

[CytExpert Electronic Record Management Software Option Shown]

Requisition Image:

*** * * * * * * * * * * * * * * * * *

b. Verify that the connection indicator light in the lower left corner of the software screen is green, and *Connected* is displayed. The left side shows the connection status, the middle shows the instrument status, and the right side shows the status details.

c. Verify that the *Sheath* and *Waste* flow indicators in the lower right corner of the software screen are green indicating that the fluidics system is normal.

NOTE

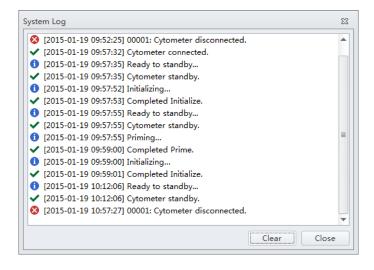

• A red connection indicator light indicates that there is a faulty connection. Ensure that the instrument is properly turned on and connected. If necessary, restart both the Cytometer and the Workstation.

兽 Disconnected 🛛 兽 E	irror 😣	[2015-01-19 10:57:27] (00001: Cytometer disconnected.
----------------------	---------	-------------------------	--------------------------------

• After the instrument initializes, a warning beep sounds if there is a problem with the fluidics system. If a flow indicator is red and blinking, it means that the fluidics system requires attention.

- When the waste fluid sensor is disconnected, the waste flow indicator shows that the waste container is full or nearly full.
- Select the status information in the lower left to open the system log. Send a copy of the system log to your Beckman Coulter Representative for support if a service call is requested.

Logging Out of the Software

If you have the CytExpert User Management or the CytExpert Electronic Record Management software option installed, select the username displayed in the top-right corner of the software screen and select **Log out**.

			ē	23
		Adm	inistra	tor
\cap	Adminis	trato	r	
25	Username:	Admir	ו	
	Lock	Lc	g out	t

If you have the CytExpert Default software option installed, log out is not required. Select **File > Exit** to close the CytExpert software.

Locking the Account

If you have the CytExpert User Management or the CytExpert Electronic Record Management software option installed, select the username displayed in the top-right corner of the software screen and select Lock.

		0	đ	23
		Adm	inistra	tor
\cap	Adminis	trato	r	
25	Username:	Admir	ו	
	Lock	Lo	g out	

The account locks automatically if it remains inactive for a specified duration. Refer to CHAPTER 2, Account Policies - Application Inactivity Policies.

Selecting the Proper Sample Injection Mode

Select **Sample injection Mode** in the Cytometer Menu to change between the Semi-Automatic Injection mode and the Manual Injection mode. The Semi-Automatic Injection mode is recommended under most circumstances. The Manual Injection mode can be used for two

purposes: running 1.5 mL and 2 mL microcentrifuge sample tubes and a backup mode that allows you to continue to collect data if the Semi-Automatic Injection mode is not working correctly.

Cyto	ometer	Settings	QC/Standa	ardiza	tion	Advanc	ed	Hel	р

	Cytom	neter Infor	mation						

Using Semi-Automatic Injection Mode

Select Sample Injection Mode > Semi-Automatic in the Cytometer menu to change the Sample Injection mode selection. The sampler status icon located in the bottom right side of the screen changes to display *Semi-automatic Sampler*.

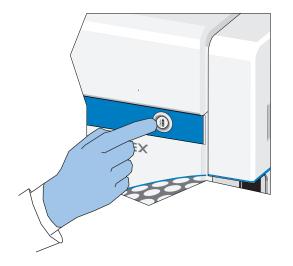

2 Select Initialize. The sample tube holder swings out from the standby position to the sample loading position (see Figure 1.12) so that you can load the sample tube.

NOTE You can also swing out the sample tube holder manually, load the sample tube, then select **Initialize**.

3 Select **Run**. The sample tube holder automatically swings back to the standby position and raises the sample tube to the sample acquisition position (see Figure 1.12), where the instrument mixes the sample and transfers the sample to the flow cell.

At the flow cell, the sample runs at the designated flow rate and the Cytometer begins to acquire data.

NOTE You can also push the load button on the front of the instrument to automatically start the run and record the data.

- **4** When you are satisfied with the data, select **Record** to record the data.
- **5** Wait for the data acquisition to finish or select **Stop**. The sample tube holder automatically lowers the sample tube and moves it to the sample loading position (see Figure 1.12) and the Cytometer backflushes the sample probe.

WARNING

Risk of biohazardous contamination. When using 1.5 mL and/or 2 mL sample tubes, always cut the cap off and do not exceed 300 μ L sample volume. Running samples with a cap attached to the sample tube or with volumes exceeding 300 μ L can result in sample splashing.

Using Manual Injection Mode

1 Select Sample Injection Mode > Manual in the Cytometer menu to change the Sample Injection mode selection. The sampler status icon located in the bottom right side of the screen changes to display Manual Sampler.

🧈 Manual Sampler 🛛 😁 Sheath 😁 Waste

2 Manually swing the sample tube holder out from the standby position to the sample loading position (see Figure 1.12).

3 Select Initialize.

4 Load the sample tube.

NOTE The sample tube holder accommodates 1.5 mL, 2.0 mL, and 12 x 75 mm sample tubes.

- **5** Manually swing the sample tube holder gently back to the standby position (see Figure 1.12).
- **6** Manually raise the sample tube holder gently to the sample acquisition position (see Figure 1.12) and hold the tube in that position.
- 7 Select **Boost** to transfer the sample to the flow cell.
- 8 Select Run.

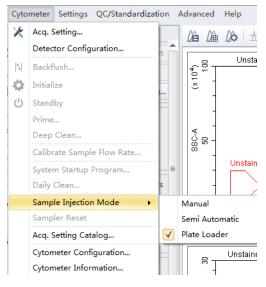

The sample runs at the designated flow rate and the Cytometer begins to acquire data.

- **9** When you are satisfied with the data, select **Record** to record the data.
- **10** Wait for the data acquisition to finish or select **Stop**. Then, manually lower the sample tube holder and move it to the sample loading position (see Figure 1.12).
- **11** Select **Backflush** to clean the probe.

Selecting the Plate Loader Sample Injection Mode [With Plate Loader]

Select **Sample Injection Mode** in the Cytometer Menu to change between the Semi-Automatic Injection mode, the Manual Injection mode, and the Plate Loader Injection mode. The Plate Loader Injection mode can be used for running small volumes using the following plates: 96-well flat-bottom, 96-well V-bottom, and 96-well U-bottom.

[CytoFLEX Shown]

Using Plate Loader Injection Mode

- Select Sample Injection Mode > Plate Loader in the Cytometer menu to change the Sample Injection mode selection.
- **2** The restart warning prompt appears on screen. Select **Οκ**.

1	Warning	8	
		Sample loading mode has been reset, please restart the cytometer, connect the appropriate probe and follow the cleaning procedure.	

NOTE The restart warning only appears when switching to and from the Plate Loader sample injection mode.

3 Turn the Cytometer's main power switch off.

NOTE If you have a CytoFLEX LX instrument, you can turn the Cytometer's power off by selecting Cytometer > Turn Off.

- **IMPORTANT** If you have the Sample Injection Mode Control Kit installed on your CytoFLEX Platform instrument, refer to APPENDIX C, Sample Injection Mode Control Kit for detailed instructions on switching from the single tube sample probe to the Plate Loader.
- **4** Remove the single tube sample probe and replace it with the plate loader PEEK tubing. Refer to CHAPTER 12, Changing the Sample Probe from the Plate Loader to the Single Tube Sample Station [CytoFLEX With Plate Loader].

5 Turn the Cytometer's main power switch on.

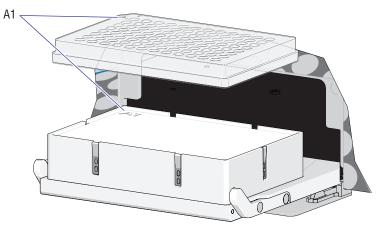

The sampler status icon located in the bottom right side of the screen changes to display *Plate Loader*.

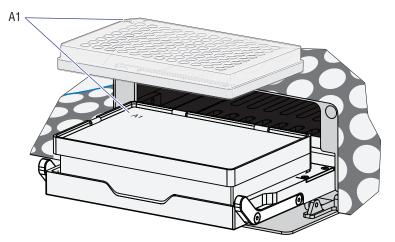

NOTE If you have a CytoFLEX LX instrument, you can turn the Cytometer's power on by selecting Cytometer > Turn On.

- 6 Select Initialize.
- 7 Select Eject.
- **8** Place the plate flat on the plate holder and ensure that it is secure.

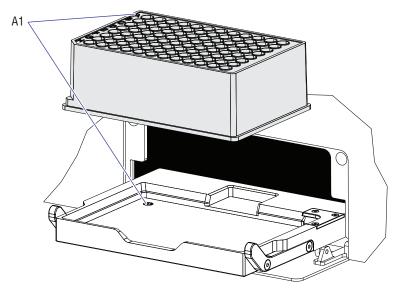

[Standard 96-Well Plate in the Plate Holder (Without Groove)]

[Standard 96-Well Plate in the Plate Holder (With Groove)]

[96-Well Deep Well Plate Only]

NOTE Ensure that plate well A1 aligns with position A1 on the plate holder.

- **9** Select **Load** to load the plate.
- **10** Select **Run**. The plate loader automatically loads the plate holder stage and begins to acquire data.
- **11** When you are satisfied with the data, select **Record** to record the data.

12 Wait for the data acquisition to finish or select **Stop**. The Cytometer backflushes the sample probe.

13 Select **Eject** to eject the sample loader.

Running the System Startup Program [with the Single Tube Loader]

IMPORTANT Instructions on the software window vary depending on whether you are in semi-automatic injection mode or manual injection mode.

The system startup program takes approximately 10 minutes if the fluidic self-check is enabled. The system startup program takes approximately 8 minutes if the fluidic self-check is not enabled.

NOTE The fluidic self-check is an optional feature only available when the sheath damper upgrade is implemented.

1 Select Initialize.

2 Select System Startup Program in the Cytometer menu.

[CytoFLEX LX Shown]

Step5: Completed.	
	(e
	Close

Running the System Startup Program [With Plate Loader]

The system startup program takes approximately 10 minutes if the fluidic self-check is enabled. The system startup program takes approximately 8 minutes if the fluidic self-check is not enabled.

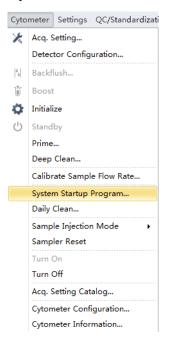

- **NOTE** The fluidic self-check is an optional feature only available when the sheath damper upgrade is implemented.
- 1 Select Initialize.

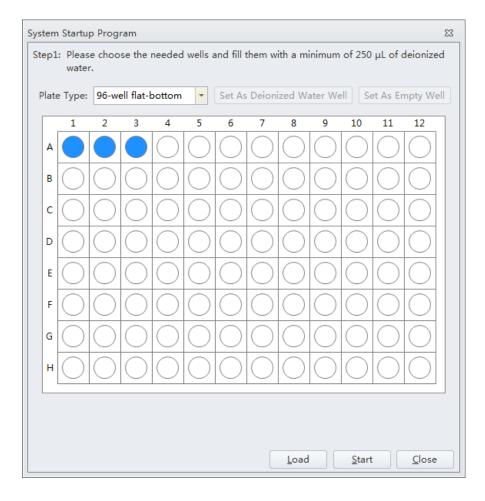

2 If the confirm window appears, select Yes.

Confirm	
?	It's been over 24 hours since the last execution of "System Startup Program", execute "System Startup Program"?
	Yes No

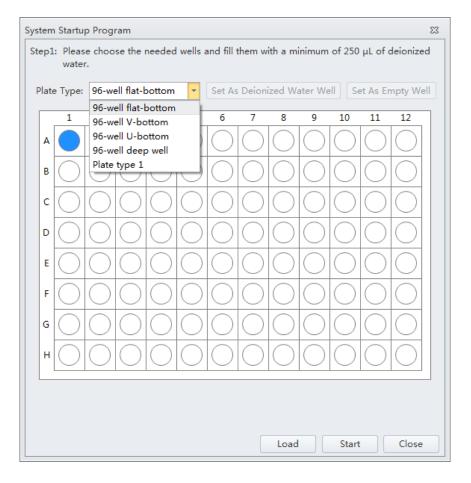

3 Select **System Startup Program** from the Cytometer menu to open the System Startup Program window.

[CytoFLEX LX Shown]

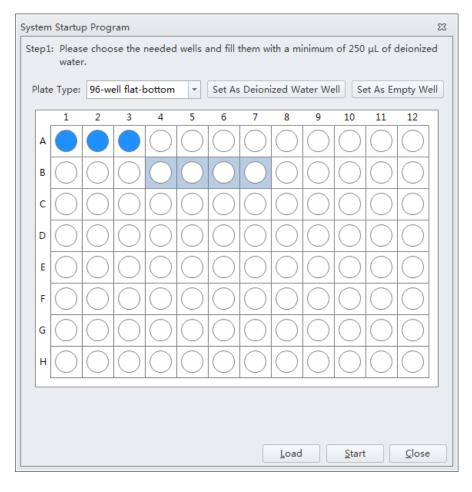

The plate loader automatically ejects the plate holder stage and the System Startup Program window appears.

4 Select the desired plate type from the Plate Type drop-down menu.

NOTE The available plate types included in the drop-down menu depend on the settings selected in the Plate Library. To activate a plate type, refer to CHAPTER 2, Plate Type Library.

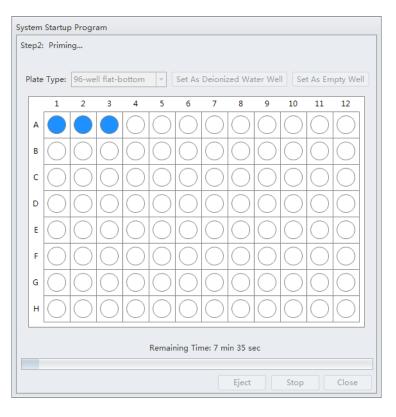

5 Follow the on screen software prompts and select the desired wells and select **Set As Deionized Water Well**.

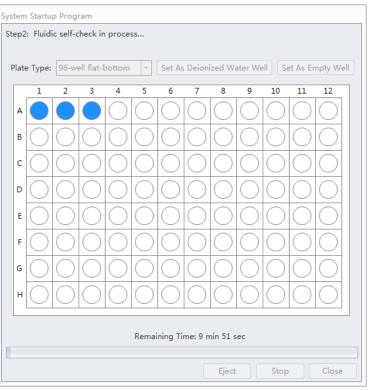

NOTE To deselect water wells, select the desired well and select Set As Empty Well.

NOTE Prepare two to six sample wells with deionized water.

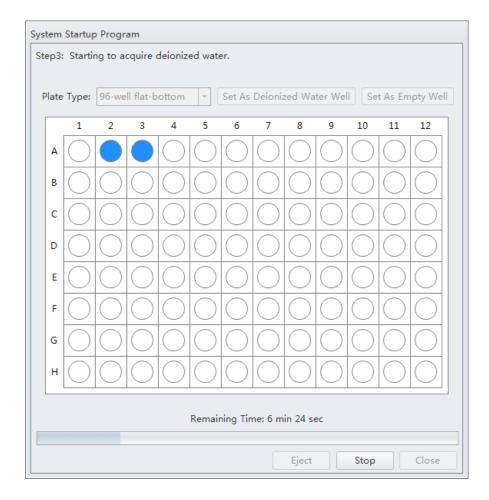

- **6** Select **Load** to load the plate.
- 7 Select **Start** to start the program. The message *Please confirm that the correct plate is placed properly and press OK* appears. Select **OK**.

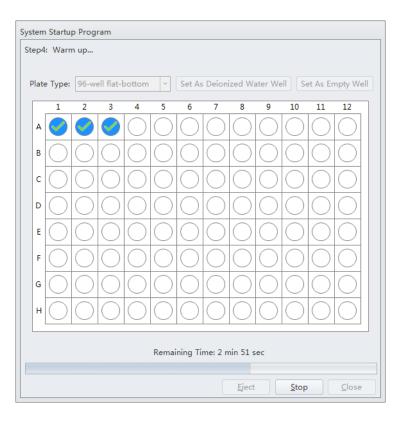

Wait for the system to initialize. The instrument begins prime or run the fluidic self-check. This process takes about 1 minute if the fluidic self-check is not enabled. This process takes about 4 minutes if the fluidic self-check is enabled.

After priming or running the fluidic self-check, the system initializes again. The sample is loaded automatically. This process takes about 1 minute per well.

When the system finishes acquiring the selected sample well, it uses the remaining time to warm up.

- System Startup Program 23 Step5: Completed. Plate Type: 96-well flat-bottom Set As Deionized Water Well Set As Empty Well 5 6 10 11 12 7 8 9 2 3 4 1 А В С D Е F G н <u>C</u>lose
- **8** When warm up is complete the plate loader ejects the plate holder stage. Select **Close** to quit the startup program. The system is now initialized.

Selecting Experiments from the Start Page

Refer to CHAPTER 2, Start Page.

Initializing the Instrument

1 Select Initialize in the Data Acquisition Control screen or select Initialize in the Cytometer Menu to initialize the instrument.

Acquisition		
🔯 Initialize	Record	O Restart
🖒 Standby	🎼 Backflush	🚺 Boost
🔊 Next Tube	e 🄀 Acq. Set	ting

- **NOTE** If the instrument is in Semi-Automatic Injection mode during the initialization process, the sample tube holder automatically shifts into the sample loading position (see Figure 1.12).
- **2** Wait for the beep indicating that the instrument properly initialized.
 - **NOTE** In the initialized state, the enabled lasers power on to achieve operating status, and the sheath fluid flows. Refer to CHAPTER 6, Laser Settings.
 - If you need to execute a task with the Fluid Containers, do so with the instrument in standby state.
 - If the instrument remains idle for 10 minutes, the Cytometer automatically enters the standby state.
 - **NOTE** After approximately 30 seconds, there should be a continuous flow of waste liquid from the Cytometer to the waste container.
- **3** Proceed to the subsequent operations or select **Standby** to put the instrument in standby state.

CHAPTER 5 Instrument Quality Control and Standardization

Overview

This chapter provides information on performing daily Quality Control (QC) on the CytoFLEX flow cytometer and how to confirm that the instrument is working properly within the specified parameters. Quality Control allows you to determine whether your instrument can provide adequate signal strength and precision.

This chapter also provides information on performing standardization. CytoFLEX Daily QC Fluorospheres, CytoFLEX Ready to Use Daily QC Fluorospheres, CytoFLEX Daily IR QC Fluorospheres or any other reference material that is relevant for your application(s) may be used as the standardization sample(s). The system can only recognize a single peak.

Standardization can be used to monitor the Median Fluorescent Intensities (MFI), or target values for scatter and fluorescent parameters that have been defined and optimized for a specific application. All channels in the current configuration, those with/without an assigned QC target, can be tracked as necessary via Standardization since this portion of the CytExpert Software is used to assess application specific settings. Standardization, however, does NOT replace QC as the Cytometer's optical alignment (rCV statistical analysis), Laser Power and Laser Delay outputs are not measured during the run.

- **NOTE** Beckman Coulter recommends performing QC on a daily basis.
- **NOTE** QC target values apply exclusively to standard channels. A channel is a laser-filter combination. Refer to CHAPTER 6, Verifying, Selecting, Editing, and Creating Detector Configuration to verify that the default factory detector configuration is selected before running QC.
- NOTE CytExpert QC includes an automated QC routine with Levey-Jennings (LJ) charts tracking and logging.
- **NOTE** CytExpert Standardization allows for application-specific settings to be established and applied to future experiments.

NOTE Perform QC on the same day prior to performing the CytExpert standardization.

QC Workflow:

Prepare the QC sample →	Enter the QC \rightarrow experiment	Select QC	Acquire data	→	Confirm results
----------------------------	---------------------------------------	-----------	--------------	---	-----------------

Standardization Workflow:

This chapter contains information on:

- Preparing the QC Sample
- Preparing the QC Sample [With Plate Loader]
- Importing Lot-Specific Target Values
- Collecting QC Data
- Collecting QC Data [With Plate Loader]
- Confirming Results
- Preparing the Standardization Sample
- Generating Target Median Values
- Adding a New Standardization Item
- Performing the Standardization
- Applying the Standardized Acquisition Settings
- Standardization Target Library

Quality Control

The QC process verifies important system functions. The system:

- 1. Verifies that the unit hardware configuration matches the default configuration specified in the software. Refer to CHAPTER 6, Verifying, Selecting, Editing, and Creating Detector Configuration.
- **2.** Measures the laser power of each individual laser and ensures that each laser meets the system specifications.
- 3. Loads the QC sample and begins to acquire data.
- **4.** Verifies that the actual laser delays match those set in the software and will adjust the delay accordingly.
- **5.** Notifies you if laser delay is >2 μ s from the previous setting. The software automatically changes the laser delay setting.

OR

Notifies you if laser delay is >5 μ s from the previous setting. Manual laser delay adjustments are required. Refer to CHAPTER 12, Setting Laser Delay.

6. Verifies and calibrates the gain settings. If any of these parameters are outside of the operating limits, the system automatically adjusts these parameters. If the system is unable to adjust these parameters to fall within the operating limits, the system notifies you.

Preparing the QC Sample

Required Materials

The following materials are required to complete the QC process:

- CytoFLEX Daily QC Fluorospheres or CytoFLEX Ready to Use Daily QC Fluorospheres
- CytoFLEX Daily IR QC Fluorospheres (for systems configured with an IR laser)
- CytoFLEX Sheath Fluid or another nonionic antimicrobial sheath fluid
- Sample tubes (12 x 75 mm)
- Vortexer

CytoFLEX Daily QC Fluorospheres Preparation Process

IMPORTANT For preparation instructions for the CytoFLEX Ready to Use Daily QC Fluorospheres or the CytoFLEX Daily IR QC Fluorospheres, refer to CytoFLEX Ready to Use Daily QC Fluorospheres Preparation Process or CytoFLEX Daily IR QC Fluorospheres Preparation Process.

- **1** Take one sample tube and label it as the QC sample tube.
- **2** Add approximately 1 mL of deionized water to the sample tube.
- **3** Use the vortexer or shake vigorously to thoroughly mix the bottle of CytoFLEX Daily QC Fluorospheres.
- **4** Add 3 drops of CytoFLEX Daily QC Fluorospheres to the sample tube.
- **5** Vortex the sample tube to uniformly suspend the fluorospheres.
- **6** Place the sample tube in a dark location at 2-8 °C until ready to load the tube into the instrument for QC.
 - **NOTE** Tubes containing diluted CytoFLEX Daily QC Fluorospheres should be sealed and stored in a dark location at 2-8 °C for up to 5 days.

CytoFLEX Ready to Use Daily QC Fluorospheres Preparation Process

- **IMPORTANT** For preparation instructions for the CytoFLEX Daily QC Fluorospheres or the CytoFLEX Daily IR QC Fluorospheres, refer to CytoFLEX Daily QC Fluorospheres Preparation Process or CytoFLEX Daily IR QC Fluorospheres Preparation Process.
- 1 Take one sample tube and label it as the QC sample tube.
- **2** Use the vortexer to thoroughly mix the bottle of CytoFLEX Ready to Use Daily QC Fluorospheres for two or three seconds.
- **3** Add 10 drops of CytoFLEX Ready to Use Daily QC Fluorospheres to the sample tube.
- **4** Vortex the sample tube to uniformly suspend the fluorospheres.
- **5** Place the sample tube in a dark location at 2-8 °C until ready to load the tube into the instrument for QC.

NOTE Tubes containing CytoFLEX Ready to Use Daily QC Fluorospheres should be sealed and stored in a dark location at 2-8 °C for up to 5 days.

CytoFLEX Daily IR QC Fluorospheres Preparation Process

- **IMPORTANT** For preparation instructions for the CytoFLEX Daily QC Fluorospheres or the CytoFLEX Ready to Use Daily QC Fluorospheres, refer to CytoFLEX Daily QC Fluorospheres Preparation Process or CytoFLEX Ready to Use Daily QC Fluorospheres Preparation Process.
- 1 Take one sample tube and label it as the QC/IR sample tube.
- **2** Mix the CytoFLEX Daily IR QC Fluorospheres by inversion.
- **3** Add 10 drops of CytoFLEX Daily IR QC Fluorospheres to the sample tube.
- **4** Place the sample tube in a dark location at 2-8 °C until ready to load the tube into the instrument for QC.

NOTE Tubes containing diluted CytoFLEX Daily IR QC Fluorospheres should immediately be sealed and stored in a dark location at 2-8 °C for up to 5 days.

Preparing the QC Sample [With Plate Loader]

Required Materials

The following materials are required to complete the QC process:

- CytoFLEX Daily QC Fluorospheres or CytoFLEX Ready to Use Daily QC Fluorospheres
- CytoFLEX Daily IR QC Fluorospheres (for systems configured with an IR laser)
- CytoFLEX Sheath Fluid or another nonionic sheath fluid
- Standard 96-well plate
 - 96-well flat-bottom
 - 96-well V-bottom
 - 96-well U-bottom
- 96-well deep well plate
 - 96-well V-bottom
 - 96-well U-bottom
- Vortexer

CytoFLEX Daily QC Fluorospheres Preparation Process

- **IMPORTANT** For preparation instructions for the CytoFLEX Ready to Use Daily QC Fluorospheres or the CytoFLEX Daily IR QC Fluorospheres, refer to CytoFLEX Ready to Use Daily QC Fluorospheres Preparation Process or CytoFLEX Daily IR QC Fluorospheres Preparation Process.
- 1 Take one 96-well plate and record the QC sample well position.
- **2** Use the vortexer or shake vigorously to thoroughly mix the bottle of CytoFLEX Daily QC Fluorospheres.

IMPORTANT Do not overfill the sample well.

- **3** Add one drop of CytoFLEX Daily QC Fluorospheres to the sample well.
- 4 Add 200 μ L of deionized water to the sample well.
- **5** Place the well plate in a dark location at 2-8 °C until ready to load the well plate into the instrument for QC.

NOTE Well plates containing diluted CytoFLEX Daily QC Fluorospheres should be stored sealed in a dark location at 2-8 °C for up to 5 days.

CytoFLEX Ready to Use Daily QC Fluorospheres Preparation Process

- **IMPORTANT** For preparation instructions for the CytoFLEX Daily QC Fluorospheres or the CytoFLEX Daily IR QC Fluorospheres, refer to CytoFLEX Daily QC Fluorospheres Preparation Process or CytoFLEX Daily IR QC Fluorospheres Preparation Process.
- 1 Take one 96-well plate and record the QC sample well position.
- **2** Use the vortexer to thoroughly mix the bottle of CytoFLEX Ready to Use Daily QC Fluorospheres for two or three seconds.
- **3** Add 3-4 drops of CytoFLEX Ready to Use Daily QC Fluorospheres to sample well.
- **4** Place the well plate in a dark location at 2-8 °C until ready to load the well plate into the instrument for QC.

NOTE Well plates containing CytoFLEX Ready to Use Daily QC Fluorospheres should be stored sealed in a dark location at 2-8 °C for up to 5 days.

CytoFLEX Daily IR QC Fluorospheres Preparation Process

- **IMPORTANT** For preparation instructions for the CytoFLEX Daily QC Fluorospheres or the CytoFLEX Ready to Use Daily QC Fluorospheres, refer to CytoFLEX Daily QC Fluorospheres Preparation Process or CytoFLEX Ready to Use Daily QC Fluorospheres Preparation Process.
- 1 Take one 96-well plate and label one well as the QC/IR sample well.
- **2** Mix the CytoFLEX Daily IR QC Fluorospheres by inversion.

IMPORTANT Do not overfill the sample well.

- **3** Add 3-4 drops of CytoFLEX Daily IR QC Fluorospheres to the sample well.
- **4** Place the well plate in a dark location at 2-8 °C until ready to load the well plate into the instrument for QC.

NOTE Well plates containing CytoFLEX Daily IR QC Fluorospheres should immediately be sealed and stored in a dark location at 2-8 °C for up to 5 days.

Importing Lot-Specific Target Values

Import lot-specific target values for each new lot of CytoFLEX QC Fluorospheres, CytoFLEX Ready to Use Daily QC Fluorospheres, or CytoFLEX Daily IR QC Fluorospheres.

Risk of erroneous QC results. Different target value information correspond to different lot numbers. Selecting the wrong lot number will lead to erroneous QC results.

- **1** Open the CytExpert QC screen.
- 2 Select Target Library from the Settings menu. The Target Library window appears.

ot No.	Expires	Lot No.: (5347

[CytoFLEX LX Shown]

Ensure that the QC bead lot number is selectable in the Lot No. drop down menu. If the lot number is not selectable, refer to Importing Lot-Specific Target Values, then select the proper lot number.

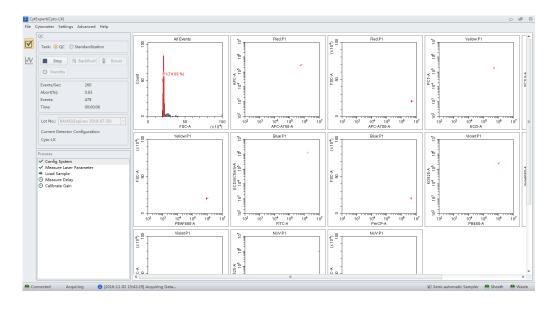

- **5** Select Initialize.
- **6** Insert the prepared QC sample tube (see CytoFLEX Ready to Use Daily QC Fluorospheres Preparation Process, or CytoFLEX Daily QC Fluorospheres Preparation Process) into the tube holder.
- 7 Select **Start** to load the sample and begin to run the QC procedure.

Completed processes appear on the left. Plots appear on the right. The QC experiment sequentially detects the system configuration, laser power, laser delay, signal strength, and coefficient of variation.

 Config System 	
-----------------------------------	--

- ➡ Measure Laser Parameter
- Load Sample
- 🕒 Measure Delay
- 🕒 Calibrate Gain

During QC, the software automatically seeks the CytoFLEX QC Fluorospheres and computes the results. The software returns to the QC Report screen after the QC run is complete.

- **8** If the sampling rate is too low, the Cytometer stops the QC run and displays a prompt alerting you that the QC run failed to reach the required event flow rate. This is not considered a QC failure. If this situation occurs, increase the sample concentration by adding one drop of CytoFLEX QC Fluorospheres to the sample tube and then perform the QC.
- **9** If the lot number of CytoFLEX QC Fluorospheres is new and QC fails, the following software message appears. Select **Yes**.

Confirm	
?	QC failed, do you want to save the adjusted gain as bead gain for the current batch and QC Gain?

NOTE Target gain values must be established for each new lot number of CytoFLEX QC Fluorospheres. QC could fail up to 3 times upon running each new lot number for the first time until target gain values are established.

If the lot number of CytoFLEX QC Fluorospheres is NOT new and QC fails, refer to Step 3 of CHAPTER 5, Confirming Results, or CHAPTER 10, Troubleshooting.

If QC passes, proceed to Step 16.

10 Run Daily Clean to remove any residual fluorosphere particles if using CytoFLEX Daily QC Fluorospheres. Refer to CHAPTER 11, Daily Clean.

Collecting QC Data [With Plate Loader]

QC data and reports are saved by default. Select **QC/Standardization Setting** in the Settings menu to change the default save settings or modify the file path these files are saved to.

Ensure that the QC bead lot number is selectable in the Lot No. drop down menu. If the lot number is not selectable, refer to CHAPTER 5, Importing Lot-Specific Target Values, then select the proper lot number.

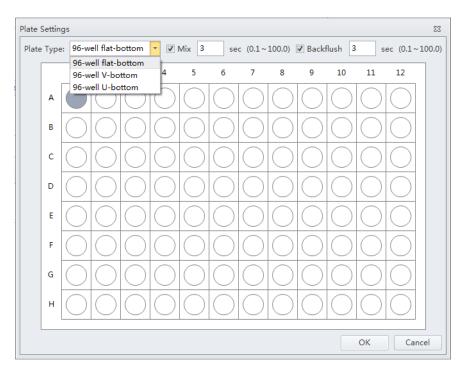

- 5 Select Initialize.
- 6 Select Eject.
- 7 Insert the prepared QC well plate (see CytoFLEX Daily QC Fluorospheres Preparation Process or CytoFLEX Ready to Use Daily QC Fluorospheres Preparation Process or CytoFLEX Daily IR QC Fluorospheres Preparation Process) into the plate holder.

IMPORTANT Ensure the well position on the plate matches the well position selected in the software.

9 Select the appropriate QC well.

NOTE The available plate types included in the dropdown menu depend on the settings selected in the Plate Library. Refer to CHAPTER 2, Plate Type Library.

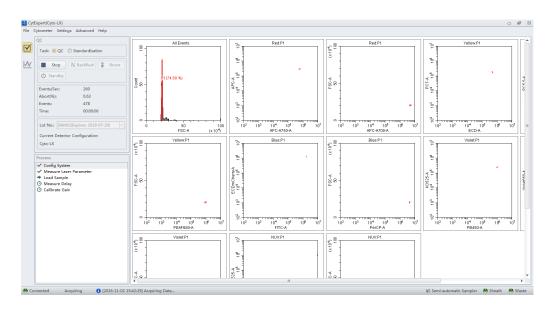

11 Select the Mix and Backflush settings in the top of the Plate Settings window.

12 Select ок.

13 Select **Start** to load the sample and begin to run the QC procedure. The message *Please confirm that the correct plate is placed properly and press OK* appears. Select **OK**.

Completed processes appear on the left. Plots appear on the right. The QC experiment sequentially detects configuration, laser power, laser delay, signal strength, and coefficient of variation.

- Config System
- Measure Laser Parameter
- 🕒 Load Sample
- Measure Delay
- 🕒 Calibrate Gain

During QC, the software automatically seeks the CytoFLEX QC Fluorospheres and computes the results. The software returns to the QC screen after the QC run is complete.

14 If the sampling rate is too low, the Cytometer stops the QC run and displays a prompt that the QC run fails to reach the required event flow rate. This is not considered a QC failure. If this situation occurs, increase the sample concentration by adding one drop of CytoFLEX Daily QC Fluorospheres to the sample tube or prepare a new tube of CytoFLEX Ready to Use Daily QC Fluorospheres and then perform the experiment.

NOTE Mix the fluorospheres dropper bottle thoroughly before dispensing it into a sample tube.

- **NOTE** If the sample flow rate is not correct, calibrate the sample flow rate before running the QC. For instructions on calibrating the sample flow rate, refer to CHAPTER 12, Calibrating the Sample Flow Rate or CHAPTER 12, Calibrating the Sample Flow Rate [With Plate Loader].
- **15** If the lot number of CytoFLEX QC Fluorospheres is new and QC fails, the following software message appears. Select **Yes**.

Confirm		
?	QC failed, do you want to save the adjusted gain as bead gain for the current batch and QC Gain?	
	Yes	

NOTE Target gain values must be established for each new lot number of CytoFLEX QC Fluorospheres. QC could fail up to 3 times upon running each new lot number for the first time until target gain values are established.

If the lot number of CytoFLEX QC Fluorospheres is NOT new and QC fails, refer to Step 3 of CHAPTER 5, Confirming Results, or CHAPTER 10, Troubleshooting.

If QC passes, proceed to Step 16.

16 Run Daily Clean to remove any residual fluorosphere particles. Refer to CHAPTER 11, Daily Clean [With Plate Loader].

Confirming Results

Select **Start QC/Standardization** in the QC/Standardization menu to return to the QC Setting screen at any time to review completed experiment results.

1 Select the desired default configuration and date range from the drop-down menus located on the left side of the QC screen to sort by the configuration used during the specified date range.

Detector Configuration:								
Default-Configuration ·								
Date:	2016-10-23	*	~	2016-11-22	*			

NOTE At least one date range must be specified.

2 Select a QC run from the QC Process list on the left and a QC report appears on the right.

Process Date	Lot No.	Result	
2016-11-02 15:02	BAH02	8	-
2016-11-02 15:05	BAH02_SE	8	
2016-11-02 15:07	BAH02_SE	\checkmark	
2016-11-02 15:17	BAH02	\checkmark	
2016-11-02 15:41	BAH02	0	
			Ŧ

NOTE The results column indicates a passing QC result with a $extsf{ extsf{ extsf extsf{ extsf{ extsf exts extsf{ extsf extsf{ extsf{ exts$

QC results must meet the following criteria to pass:

- The gain differences must be $\leq 20\%$ from the target gain.
- The median fluorescence intensity (MFI) differences must be ≤5% from the target MFI.
- The rCV must be within the range.

NOTE The CytoFLEX Daily QC Fluorospheres / CytoFLEX Ready to Use Daily QC Fluorospheres / Daily IR QC Fluorospheres (808 Laser) rCV must meet the following criteria to pass:

- The rCV for channels of the 405 nm, 488 nm, 561 nm, 638 nm lasers must be \leq 5%.
- − The rCV for channels of the 355 nm, 375 nm, 808 nm lasers must be \leq 7%.

The report area on the right displays detailed experiment results, including laser power, delay, testing conditions, and signal results. The same \checkmark and \bigotimes symbols are used to indicate each result. For items that fail, values falling outside the prescribed range are displayed in red font. In the Comment area, an explanation appears for each failed item.

Specifications

Delay: -5.00µs ≤ Difference Delay ≤ 5.00µs. Gain: -20.00% ≤ %Difference Target Gain ≤ 20.00%. Median: -5.00% ≤ %Difference Target Median ≤ 5.00%. rCV: rCV(%) ≤ Target rCV(%).

Result

QC Failed.

Comment

The difference between FSC gain and target is more than 20%. The difference between SSC gain and target is more than 20%. The difference between FITC gain and target is more than 20%. The difference between PE gain and target is more than 20%. APC gain calibration was failed, median value is out of the target value range. APC-A750 gain calibration was failed, median value is out of the target value range. Laser-filter combinations that are not part of a default configuration may not have a target value defined in the QC target file and therefore will not generate a result during QC. Use the Target Library in the QC screen of CytExpert Software to view the list of laser-filter combinations that have target values assigned within a target file and therefore will return a result for QC.

Result

QC Passed.

Comment

No target value for CUSTOM(Red,769/45).

3 If QC fails, follow the procedure below:

NOTE Select No if the Confirm window appears.

Confirm	
?	QC failed, do you want to save the adjusted gain as bead gain for the current batch and QC Gain?
	Yes

- **a.** Verify whether the beads used were within their shelf life and stored in accordance with the appropriate instruction manual.
- **b.** Verify whether the allocated sample tube was prepared as required and correctly positioned.
- **c.** Verify whether the detector configuration selected for QC matches with the current detector configuration. Refer to CHAPTER 6, Verifying, Selecting, Editing, and Creating Detector Configuration.
- d. Run CHAPTER 12, Priming the Flow Cell, and retest.
- e. Run CHAPTER 11, Daily Clean, and retest.
- f. Run CHAPTER 11, Deep Clean Procedure, and retest.
- **g.** Repeat Steps d-e.

NOTE If QC fails two times in a row on the same day after repeating Steps a-g, contact us.

- **4** If necessary, you can select ^I⊂ (for CSV format) or ^I⊂ (for PDF format) in the top left corner of the report area to export the QC results.
- **5** Select **Close QC/Standardization** in the File menu to exit the QC screen.

Creating Levey-Jennings Charts

- Select **Start QC/Standardization** in the QC/Standardization menu to open the QC screen.
- **2** Select LJ chart **1** on the left side of the screen.

IMPORTANT When there are multiple lots, select which lot to create the LJ charts from.

3 Select LJ Chart Settings in the top of the LJ Chart screen. The LJ Chart Settings screen appears.

LJ Charts Set	tting					23
Detector C	onfigura	ition: De	fault-Configu	ration	-	
Lot No.	Laser	Channel	Alarm Bou	ndary and Scale	e Range	
	Lot	No.	Start Date	End Date		
0	6347		2014-08-08	2014-08-08		
				ОК	Cancel	Apply
L						

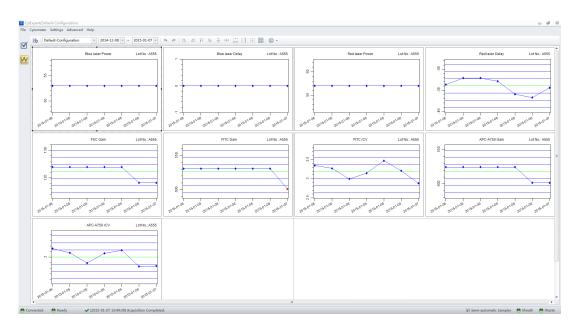

4 Select the **Laser** tab, and select the power and/or delay checkboxes for each laser as needed.

LJ Charts Se	tting					23

	APC-A750							
	PB450							
	KO525							
	Violet610							
	Violet660							
	Violet780							

- **6** Select Apply.
- 7 Select OK.
- **8** Select the Levey-Jennings plot and select the start and end date from the drop down boxes at the top of the LJ Chart screen to specify the desired date range.

NOTE Select the desired configuration and date range from the drop-down menus located at the top of the LJ Chart screen to sort by the configuration used during the specified date range.

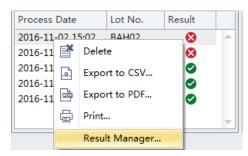

9 Select **Close QC/Standardization** in the File menu to exit the QC screen.

QC Result Manager

The QC Result Management window can be used to search, delete, print, and export QC results.

To access the QC Result Manager, right-click the desired QC result and select **Result Manager** in the QC screen. The QC Result Manager window appears.

Standardization

Ensure that the standardization sample has been run at optimized experiment settings to determine the standardization sample threshold setting as well as median values for all relevant channels.

Preparing the Standardization Sample

Use Beckman Coulter CytoFLEX Daily QC fluorospheres or CytoFLEX Ready to Use Daily QC Fluorospheres or any other reference material that is relevant for your application.

Required Materials

The following materials are required to complete the QC process:

- CytoFLEX Daily QC Fluorospheres or CytoFLEX Ready to Use Daily QC Fluorospheres, or other material applicable for your application
- CytoFLEX Daily IR QC Fluorospheres (for systems configured with an IR laser)
- CytoFLEX Sheath Fluid
- Sample tubes (12 x 75 mm).
- Vortexer

Preparation Process

For procedures, refer to CytoFLEX Daily QC Fluorospheres Preparation Process and/or CytoFLEX Ready to Use Daily QC Fluorospheres Preparation Process and/or CytoFLEX Daily IR QC Fluorospheres Preparation Process.

Generating Target Median Values

- **1** Double-click **i** to start the CytExpert software.
 - **a.** Ensure that the **Connected** icon on the Status Bar near the bottom-left side of the display is green.

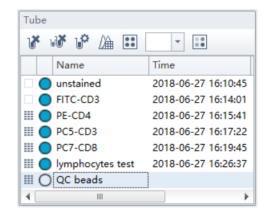

Connected	Standby	[2015-01-19 10:12:06] Cytometer standby.
eonnooroa	Goundaby	

- **b.** If the icon is not green, ensure that the Cytometer USB is securely connected to the Workstation and restart the Workstation.
- **2** Select **Open Experiment** to open an experiment with the desired acquisition settings to standardize.

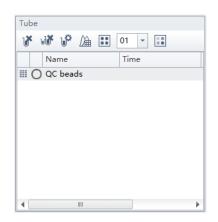

NOTE Ensure the Gain and Threshold settings are optimal. Refer to CHAPTER 6, Adjusting the Gain and CHAPTER 6, Adjusting the Threshold.

3 Right-click the tube and select **Duplicate without Data** to create a tube with the same acquisition settings.

4 Change the tube name. Refer to CHAPTER 6, Changing the Tube Name.

- **5** Select **Save As** from the File menu to save the experiment.
- **6** Select **i** to delete all the remaining tubes.

9 Load the sample tube.

NOTE The sample tube holder accommodates 1.5 mL, 2.0 mL, and 12 x 75 mm sample tubes.

10 Select Run.

11 View the plots and establish the gates. Refer to CHAPTER 6, Creating Plots and Gates.

NOTE Use the FSC channel as the trigger channel and select **Automatic** threshold.

- **NOTE** The threshold may need to be adjusted to visualize the QC beads populations. If so, record this value for future reference.
- **12** Right-click the table and select **Statistics Settings**. The Statistics Setting window appears.

14 Select the **Statistics** tab then select the Median Fluorescence value for all parameters used.

Population	Median FSC-A	Median SSC-A	Median FITC-A	Median PE-A	Median PC7-A
QC beads	237489.3	660867.4	1009959.8	984541.4	1034120.

NOTE The median values are the target settings that will be used for standardization.

15 Right-click the statistics table and select **Export tube to CSV file**.

If Excel is not available, manually record all the median values or take a screen shot.

16 Save the experiment.

NOTE Rerun the experiment if:

- You change the standardization fluorosphere used.
- The Lot number for the standardization fluorosphere is changed.

Adding a New Standardization Item

1 Select **Start QC/Standardization** in the QC/Standardization menu to access the Standardization screen.

4 Enter the Item, Lot No., and Expire date from the drop downs located at the top of the Add Standardization Target Value window.

NOTE A single Lot No. can include several Items, but you cannot add duplicate Items under the same Lot No..

NOTE If the Lot No. selected already exists, the Expire date cannot be edited.

- **5** Select either Manual or Automatic threshold from the Standardization Test Setting or Acquisition Setting section of the window.
 - **NOTE** If you select Manual threshold, enter a value greater than 0, but less than 8,388,600.
 - **NOTE** Keep the threshold setting the same as previous Step 11 in Generating Target Median Values.
 - **NOTE** Unchecking the *Use the same threshold setting for acquisition setting* checkbox allows you to specify custom threshold settings.

6 Set the channels to be standardized.

NOTE The contents of the channel, laser, and filter column come from the current detector configuration setting. Refer to Verifying, Selecting, Editing, and Creating Detector Configuration in Data Acquisition and Sample Analysis.

NOTE Do not set the median tolerance range any lower than 5%.

NOTE FSC is a required channel.

7 Enter the target median values saved in Step 14 into the corresponding channels.

Or copy the median values from the previously exported CSV file and paste into the corresponding median column.

NOTE Verify that the target values are entered correctly.

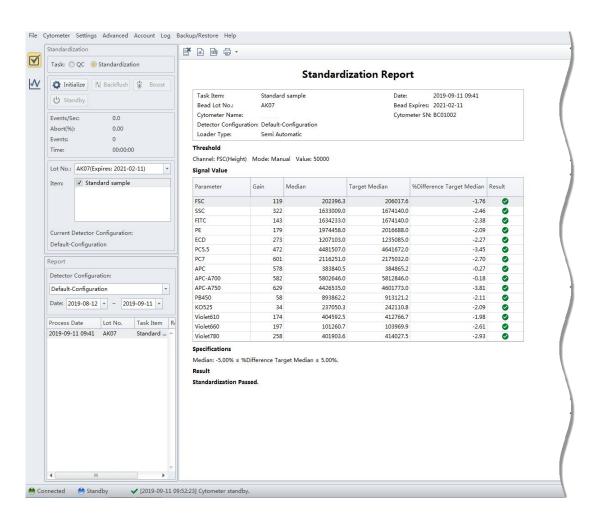

8 Select **OK** to save the target value.

The saved results display in the Standardization Target Library window. This item is ready to be run through the Standardization experiment. Refer to CHAPTER 5, Performing the Standardization.

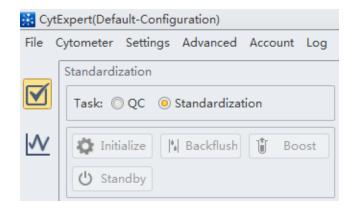

9 Select **Close** to exit the Standardization Target Library window.

Performing the Standardization

1 Select **Start QC/Standardization** in the QC/Standardization menu to access the Standardization screen.

2 Select the **Standardization** radio button.

3 Select the correct Lot No. from the Lot No. dropdown.

Item:	AL01(Expires: 2022-01-24)	
item.		
C	Detector Configuration:	
Current i		

NOTE Ensure the Lot No. corresponds to the standardization sample that generated the target median values.

4 Select the Items to be standardized.

Lot No.:	AL01(Expires: 2022-01-24)	
Item:	✓ QC beads	
Current [Detector Configuration:	

5 Select the proper detector configuration. Refer to CHAPTER 6, Verifying, Selecting, Editing, and Creating Detector Configuration.

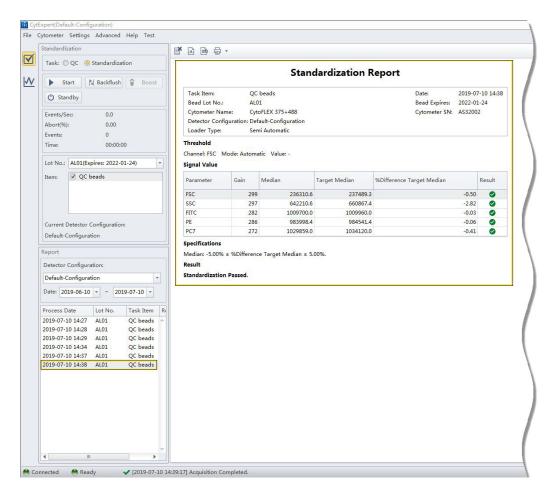

6 Select Initialize.

7 Select Start

The Process section of the screen displays the process details.

Process	
✓ Config System	
✓ Load Sample	
Calibrate QC beads Gain	

Once the process is complete, the Standardization Report displays.

NOTE The updated Standardization item is added to the Acquisition Catalog automatically and overwrites the previously existing standardized settings for this item.

8 Select **Acq. Setting Catalog** from the Cytometer menu to verify the gain settings. The Acq. Setting Catalog window appears.

	Item	Date Created	Detector Configurati	Gain	Threshold	Width		
	Default Sett	2019-07-10 14:3		Chann	el Name		Gain	
	4555	2019-07-10 14:3		FSC				299
S	QC beads	2019-07-10 14:3	Default-Configuration	SSC			297	
				FITC				282
				PE				286
				PC7				272

NOTE <u>S</u> designates test items from Standardization.

9 Run Daily Clean. Refer to CHAPTER 11, Daily Clean.

10 Select Close QC/Standardization.

Applying the Standardized Acquisition Settings

1 Open an experiment.

NOTE The corresponding compensation matrix should have been determined as the optimal settings. Refer to CHAPTER 7, Compensation for detailed instructions on setting compensation. **2** Select **Acq.Setting** from the Cytometer menu. The Acq. Setting window appears.

5 Select OK.

Standardization Target Library

Select **Standardization Target Library...** from the Settings menu. The standardization Target Library window appears.

NOTE The Item name displays in the Acquisition Setting Catalog window as the saved acquisition setting name.

Importing a Standardization Item

- 1 Select Import... on the Standardization Target Library window.
- **2** Browse for the Item to import and select **Open .**

The imported item displays at the top of the list in the Standardization Target Library window.

NOTE If the standardization item is existing in the target library, the importing will overwrite the existing item. The system will prompt to ask you to confirm.

3 Select Close to exit the Standardization Target Library w	window.
--	---------

Exporting a Standardization Item

1 Browse for the Item to export.

The available items display on the left panel of the Standardization Target Library window.

2 Select **Export...** on the Standardization Target Library window.

3 Navigate to the desired file path and select **Save**.

NOTE The standardization items save as .stgt file. This file can be used to standardize the settings between different instruments with the same laser and optical filter configuration.

4 Select **Close** to exit the Standardization Target Library window.

Editing Standardization Item Parameters

Select an item from the Item column on the Standardization Target Library window and select

2 Edit the parameters for that item and select **OK**.

NOTE Task Item, Lot No., and Expire date cannot be edited.

3 Ensure the item parameters are correct then select **Export...** and save the file.

4 Select Close to exit the Standardization Target Library window.

Duplicating Standardization Items

 Select an existing item from the Item column on the Standardization Target Library window and select <u>Duplicate...</u>. **2** Edit Item, Lot No., Expire date and the parameters for that item and select **OK**.

NOTE Perform a new standardization if the Lot No. of standardization sample is changed.

3 Ensure the item parameters are correct then select **Export...** and save the file.

4 Select **Close** to exit the Standardization Target Library window.

Deleting Standardization Items

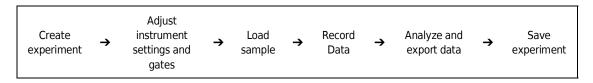

- **1** Select an item from the Item column on the Standardization Target Library window.
- 2 Select Delete. The confirm message *The target values will be permanently deleted. Are you sure?* displays. Select **Yes** to confirm.
- **3** Select Close to exit the Standardization Target Library window.

CHAPTER 6 Data Acquisition and Sample Analysis

Overview

This chapter contains information on how to use your CytoFLEX and CytoFLEX LX flow cytometer, including data acquisition, analyzing and exporting results, and compensation procedures that will be executed manually during the process.

Workflow:

This chapter contains information on:

- Creating an Experiment
- Configuring Acquisition Settings
- Load Sample and Record Data
- Analyzing and Exporting Data
- Saving the Experiment

Creating an Experiment

Creating an Experiment [Without Plate Loader]

Risk of file corruption. When modifying experiment (*.xit) file names in Windows Explorer, ensure you modify the corresponding experiment folder name to match the new file name.

- **1** Open the CytExpert software and confirm that the instrument is connected. Refer to CHAPTER 4, Logging into the Software.
- **2** Verify the detector configuration. Refer to Verifying, Selecting, Editing, and Creating Detector Configuration.

- **3** Verify the laser settings. Refer to CHAPTER 6, Laser Settings.
- **4** Create or open an experiment using one of the following methods:
 - Create a new experiment:
 - Select New Experiment on the Start page, specify the file path, and save the experiment.
 Or
 - Select **New Experiment** in the File menu, specify the file path, and save the experiment.
 - Create a new experiment from a template:
 - Select New Experiment from Template on the Start page. Select Browse next to New Experiment and specify the file path for the new experiment, then select Browse next to Template and specify the file path to the existing template.
 Or
 - Select New Experiment from Template in the File menu, specify the file path and save the experiment. Or
 - Select the Template tab on the Start page and select the template from the list of recently used templates. Specify the file path and save the experiment.
 - Open an existing experiment:
 - If you are using either the CytExpert Default Software Option or the CytExpert User Management Software Option: Select Open Experiment on the Start page, specify the file path and save the experiment.

If you are using the CytExpert Electronic Record Management Software Option: Select **Open Experiment** on the Start page, specify the experiment file and open the experiment.

Or

 If you are using either the CytExpert Default Software Option or the CytExpert User Management Software Option: Select Open Experiment in the File menu, specify the path and save the experiment.

If you are using the CytExpert Electronic Record Management Software Option: Select **Open Experiment** in the File menu, specify the experiment file and open the experiment.

Or

 If you are using either the CytExpert Default Software Option or the CytExpert User Management Software Option: Select the Experiment tab on the Start page and select the experiment from the list of recently opened experiments. Specify the file path and save the experiment.

If you are using the CytExpert Electronic Record Management Software Option: Select the Experiment tab on the Start page and select the experiment from the list of recently opened experiments. Specify the experiment file and open the experiment.

NOTE Experiments are saved as an .xit file. Template are saved as an .xitm file.

NOTE If you are using either the CytExpert Default Software Option or the CytExpert User Management Software Option: If you need to change the default save path, select Options in the Settings menu and modify the Default Path displayed to the right of the Experiment tab. Then select OK.

If you are using the CytExpert Electronic Record Management Software Option: Select File > Experiment Explorer to modify any Experiment Directory sub folders for the Experiment. Refer to APPENDIX B, Experiment Directory Management.

Options	Σ	3

Į	0.0	Duplicate Current Plat	e without Data											
	N	ame	Sample ID	E	vents	Grou	р			Mix	Back	flush	Time	

The Add Plate window appears.

- **NOTE** Select Add Plate from Template to add a plate template with preset plate settings.
- NOTE Select Duplicate Current Plate without Data to create a copy of the selected plate without data.
- NOTE Select Add Plate from Layout to create a plate from a preset .csv file. The CSV file can be

generated by selecting , or self-defined by other tools like Excel or Notepad.

When you create a CSV file, make sure to follow the example:

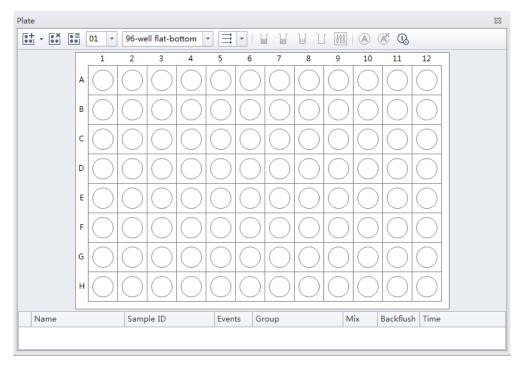

- 1. In the first row, enter the following column titles WellLabel, TubeName, SampleID, Group in sequence as shown in Figure 6.1. The table header cannot be customized.
- 2. In the WellLabel column, a maximum of 96 wells can be defined, beginning with A1-A12, B1-B12, and so on.

Figure 6.1 CSV template

15	B2			
16	B3			
17	B4			

4 Select the Plate type from the dropdown.

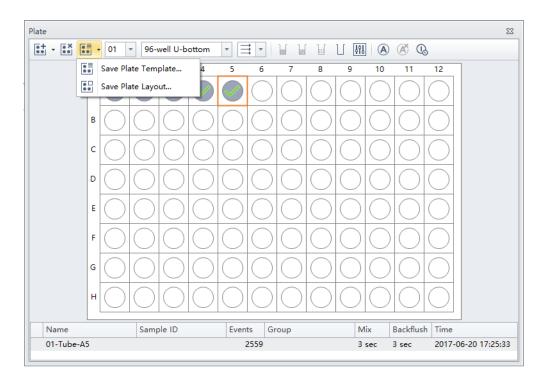

5 Select the direction of the workflow from the sampling sequence from the plate section of the window. The Plate window appears.

[CytoFLEX LX Shown]

- 6 If you need to automatically turn off the cytometer after auto acquisition is complete [CytoFLEX LX Only]:
 - **a.** Ensure you set the last sample wells with the appropriate number of cleaning agent wells and deionized water wells.

- **b.** Select 🕓 .
 - **NOTE** A gray background (.) indicates auto shutdown is disabled. A yellow background (.) indicates auto shutdown is enabled.
 - **NOTE** Select **Save Plate Template** to save the acquisition settings as a template in SCTM format. Select **Save Plate Layout** to save the name, sample ID, or metadata as a layout in CSV format.

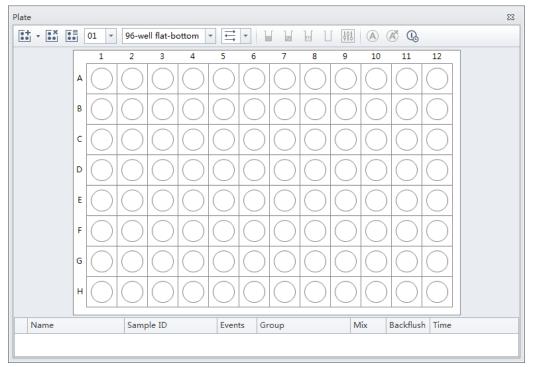

7 Select ок.

Setting Sample Wells

Once the plate protocol is created, the plate window appears. Refer to Figure 6.2.

Figure 6.2 Plate Window [CytoFLEX LX Shown]

\bigcirc	Empty well.
	The well with color is set as sample well, but is not set for Auto Record.
•	The well is set as sample well, and is ready for Auto Record. The number labeled at the right bottom shows the order of auto record.
	Cleaning Agent well.
	Deionized water well.
	A blue check mark means the data is acquired, not recorded.
\checkmark	A green check mark means the data is recorded.
×	A red cross mark means the data is recorded by Auto Record mode. But the acquisition is terminated abnormally. For example, the well is skipped or the acquisition is manually stopped.

- 1 Left-click and drag your mouse to highlight the desired wells or hold the Control key and select each desired well.
- **2** Select or right-click the selected wells and select **Set As Sample Wells**. The Set As Sample Wells window appears.

Applying Existing Well Settings to Additional Wells

1 Right-click the well with the desired settings and select **Apply Well Settings to**. The Apply Well Settings of window appears.

- **NOTE** The *Convert Compensation Matrix by the Gain of Tube* checkbox is only available when Acq. Setting is deselected. Selecting the *Convert Compensation Matrix by the Gain of Tube* checkbox converts the compensation matrix automatically by the gain of the well selected.
- **2** Select the wells to apply the well settings to.
 - **NOTE** Select the **Customize** option to select individual wells to apply the settings to. Select the **All Empty Wells** option to apply the settings to all remaining empty wells. Select the **All Sample Wells** option to apply the settings to all existing colored sample wells. You cannot apply settings to wells that already contain data.
- **3** Checkmark which settings to apply from the Select Items to Apply section of the window.

NOTE

- If Group and Name Rule are selected, the settings can be applied to any wells, and empty wells will be set as sample wells after applied.
- If Group and Name Rule are not selected, the settings can only be applied to sample wells.

Copying, Cutting, and Pasting Wells

1 Left-click and drag your mouse to highlight the desired wells or hold the Control key and select each desired well.

2 Right-click and select **Copy** or **Cut**.

NOTE When Copy or Cut is selected, the well displays as follows:

3 Right-click an empty well and select **Paste**.

NOTE The same number of wells will paste in the same orientation the wells were selected.

Moving the Location of a Well

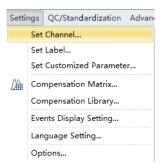

1 Right-click the desired well to move and select **Move location**.

NOTE When **Move location** is selected, the well displays as follows:

2 Select the new well location. The well will automatically move to the new selected location.

Setting the Channel and Label

1 Select **Set Channel** in the Settings menu. The Set Channel window appears.

- 2 In the Set Channel window, modify which channels are used and how they are displayed.
 - **a.** Select the channel signal check box, then you can add the reagent name in the Label column. The information you add appears in the corresponding axis of the relevant plot in the plot area. Unselected channel signals are not stored in the data file.

Creating Plots and Gates

IMPORTANT The maximum number of elements allowed in an experiment is 200. Elements include plots, statistics tables, and gate hierarchy tables.

IMPORTANT The maximum number of gates allowed in an experiment is 200.

1 Use the plotting controls (see Figure 2.1) in the plot area to create plots and gates and to generate graphs as shown.

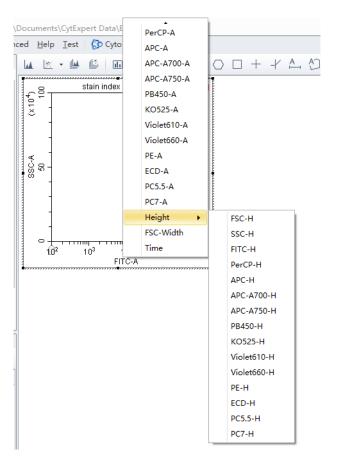

Use the *icons* to generate histograms, dot plots, density plots, pseudo color plots, and contour plot.

The experiment uses scatter plots, histograms, polygon gating, four-quadrant gating, and line-segment gating.

€ [₿] Т	Tube1: All Events	0	°⊨Tub	e1: All Events	0	21	Tube1: All Events	0	<u>5</u>	Tube1: All Events	0	81	Tube1: All Events	2
(x)			2			10 I			2

a. After selecting a plot, click and drag the mouse to adjust the position and select and drag the sizing handles at the edge of the graph to adjust the size of the graph.

b. Select an axis name to change which channel is displayed. An "A" after the channel name indicates signal pulse area, while an "H" indicates height. The default setting is "A".

- **NOTE** To modify the default settings, select **Options** in the Settings menu. The Options window appears. Select **Plot** on the left side of the Options window. Under the Signal section of the window, change the Main Channel default by selecting the **Height** or **Area**.
- **NOTE** When using both Height and Area signals, ensure the gain setting is set to where the Height signal does not reach its upper range.

Export To File Export To Catalog Close	

- **e.** Plot properties can be configured to display axes in Log, Log-Linear, or Linear format.
 - 1) Double-click the plot or right-click the plot and select **Property** from the drop-down menu. The Plot Property screen appears.

≈ X Axis	
Label: <u>FITC-A</u>	X Axis Defau
Min: 100	
Max: 1000000	Log-Linear Coefficient
Fit With Sample	Recommended 1
Auto	Custom 1
≈ Y Axis	
Label: <u>PE-A</u>	Y Axis Defau
	● Log ○ Linear
Min: 100	
Min: 100 Max: 1000000	Log-Linear Coefficient
	Log-Linear Coefficient Recommended 1

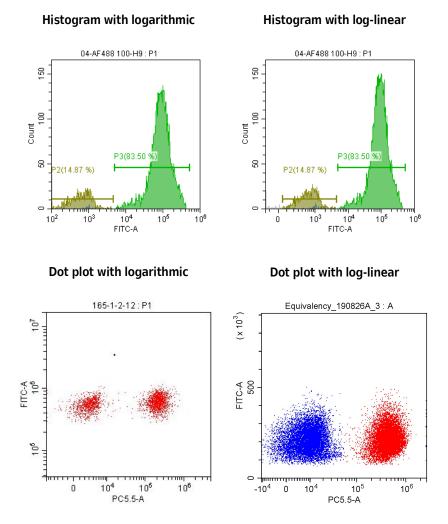

- 2) Select whether to display the axes in logarithmic or linear format for both the X-axis and Y-axis. Enter a value for log-linear coefficient if the log-linear view is desired.
- 3) Select Close.

Or

Select the logarithmic axis on the plot. The slider appears. Drag the slider along the axis to change the log-linear coefficient and view events that are not shown, including events with negative values.

NOTE The log-linear slider is also available during data acquisition.

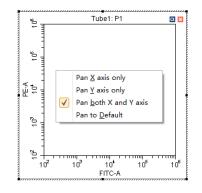

NOTE To reset the axis back to logarithmic, right-click on the axis and select **Property**. Select **X axis Default** or **Y axis Default** to reset the axis.

- **f.** You can adjust axis ranges using the pan axis display controls located at the top of the screen.
 - Select (area of a plot to enlarge. The selected area can be magnified to fill the entire graph. By selecting the zoom-out function, you can click on the graph and restore the plot to its original appearance before magnification.

B49006AT

- Select <u>Select</u> to shift the axes. The mouse pointer appears as a hand. It allows you to drag the graph to reveal the axis segment you need.
 - Pan: Modifies the axis display range dimensions when panning both axes. When the pan control is selected, you can right-click the graph and select which axis you need to adjust when dragging. You can also pan directly to the default axis range.

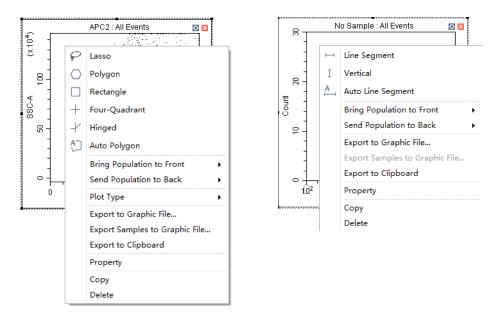

Single side pan: Modifies the axis display range dimensions when panning one axis.

NOTE Only the low end of the axis can be adjusted by the single side pan tool.

- Double-click the border area of the plot to open the Plot Property window, or right-click the plot, then select **Property** to open the same Plot Property window.
- In the Plot Property window, manually enter the minimum and maximum display values for the X- and Y-axes. You can also select **Fit With Sample** to let the software automatically adjust the lower limit according to the signal and perform the corresponding log-linear transformation. The X- and Y-axes **Default** settings are the default parameters. The default parameters are 100-1,000,000.
 - **NOTE** Select **Fit With Sample** to identify the signal's lower limit, adjusting automatically as warranted. Selecting this item is recommended whenever the signal appears to be relatively low.
 - **NOTE** Select **Auto** to automatically set the upper and lower display limits of the axes based on the data already collected.
 - **NOTE** Select **Options** in the Settings menu, then select **Plot** to modify the default setting of the axis range under the Axis Default Setting section of the window.

2 To create gates, use the $\vdash I \mathrel{\wp} \odot \Box + \checkmark \mathrel{\bigtriangleup} \mathrel{\circlearrowright}$ control buttons or right-click the plot and select the gate type required. Gates can be set according to different requirements to differentiate cell populations.

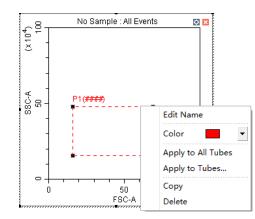

NOTE To add a vertex to a polygon gate:

- 1. Select the gate.
- 2. Hover your cursor over the perimeter of the gate until the cursor changes to the hand icon.
- 3. Select the desired location for the new gate vertex.
- **NOTE** A newly created gate becomes a subset of the plot where it appears. The relationship between parent and progeny/daughter gates can be changed when a displayed gate is subsequently modified.

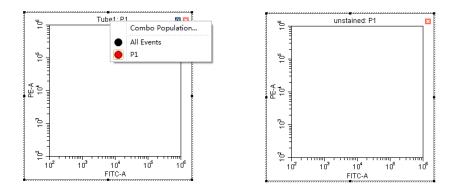

The position of the same gate in different sample tubes may vary. To change the position of a gate and apply the change to all sample tubes accordingly, you can right-click the gate and select **Apply to All Tubes**.

You can also apply the change to select tubes by selecting Apply to Tubes.

3 Select the gates to display.

a. Select the heading area of the plot, select the parent population/gate to display in the plot from the drop-down menu. The selected parent gate appears in the tab area of the plot.

NOTE The CytExpert software will not list gates which would create circular gating logic.

Figure 6.3 shows all gates defined in the example experiment below. Note that the only gate option in plot 1 of Figure 6.4 is P2 for the following reasons:

- Plot 1 cannot be gated on P1 because P1 is on that plot.
- Plot 1 cannot be gated on P2 because P2 is gated on P1.
- Plot 1 cannot be gated on the P2 OR P1 combo population because the gate logic contains P1.

Figure 6.3 All Gates - Example Experiment

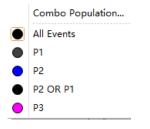

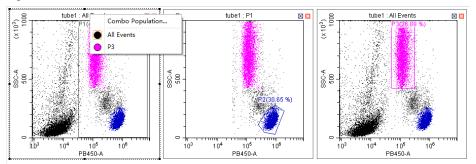

Figure 6.4 Circular Gating Logic - Example Experiment

b. If necessary, you can select the **Combo Population** option from the drop-down menu to create a combination gate, using the Boolean relationships "and", "or", and "not" to produce a new gate. You can also select the population color or change the gate name.

Combo Po	pulation				23
Name :	P1 OR P2				-
Logic :	P1 OR P2				
Populatio	on	Operator			
✓ P1		NOT	OR	O AND	
✓ P2		NOT	OR (O AND	
Clear A	I		O	к 🗌	Cancel

- "And" indicates that all selections must be satisfied. For example, "P1 and P2" means that the data for the newly added gate represent the intersection of P1 and P2.
- "Or" indicates that only one of the selections needs to be satisfied. For example, "P1 or P2" means that the data for the newly added gate represent the union of P1 and P2.
- "Not" indicates exclusion from the selection. For example, "Not P1" means that the data for the newly added gate represent the events that are not part of P1.

4 Select 🗄 to display the population hierarchy.

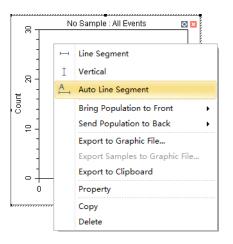

The Population Hierarchy function allows you to view how gates rank in relation to one another. To change the display color, double-click the default color and select the desired color from the drop-down color palette. To change the name of each gate, double-click the name of the desired gate. By hovering your mouse pointer over a combo population whose display name has just been changed, you can view its corresponding Boolean logical operation.

Popul	lation	Events	% Total	% Paren
~ ●	All Events	0	####	###
	• P1	0	####	###
	P2	0	####	###
	new population P1 OR P2	0	####	###

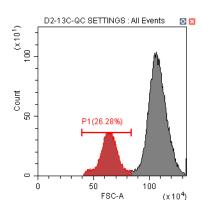

Creating and Adjusting Auto Gates

There are two types of autogates available in the CytExpert software: auto line segment and auto polygon.

To create an auto line segment gate, select A from the toolbar or right-click on the histogram and select **Auto Line Segment** from the drop down menu.

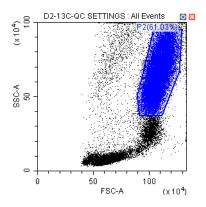

Select the population you want to gate in the histogram to automatically gate that population.

To create an auto polygon gate, select 🖄 from the toolbar or right-click on the 2D plot and select **Auto Polygon** from the drop down menu.

ç	Lasso					
\bigcirc	Polygon					
	Rectangle					
+	Four-Quadrant					
-1	Hinged					
A	Auto Polygon					
	Bring Population to Front					
	Send Population to Back					
	Plot Type					
	Export to Graphic File					
	Export Samples to Graphic File					
	Export to Clipboard					
	Property					
	Сору					
	Delete					

Select the population you want to gate in the 2-D plot. The gate will automatically be drawn to fit the population.

NOTE To add a vertex to an auto polygon gate:

- 1. Select the gate.
- 2. Hover your cursor over the perimeter of the gate until the cursor changes to the hand icon.
- 3. Select the desired location for the new gate vertex.

Turning Auto Recalculate On/Off

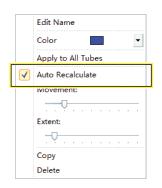

When auto recalculate is turned on, all autogates will recalculate when:

- The current tube is changed
- Compensation is changed
- Gating is changed
- Collection stops
- An FCS file is imported to the tube or well

Auto recalculate turns off after a gate is moved or the size of a gate is altered You must select **Auto Recalculate** from the auto gate menu again to turn auto recalculate back on.

NOTE Auto recalculate turns on after adjusting movement or extent.

Right-click an autogate and select **Auto Recalculate** from the auto gate menu to toggle auto recalculate on and off.

Adjusting Autogate Movement and Extent

Movement — The distance an autogate can move to find the target population.

To adjust movement, right-click an autogate and drag the Movement handle in the auto gate menu left and right.

	Edit Name
	Color 🗾 💌
	Apply to All Tubes
\checkmark	Auto Recalculate
	Movement:
	Extent:
	Сору
	Delete

NOTE The default value setting for movement is 20 units. The minimum value setting for movement is 0 units and the maximum value setting for movement is 100 units.

If a target population is consistently in the same location, movement is not needed. However, if a target population is periodically missing from some samples, or events are rare, movement can be used to move the gate within a certain percentage of its axis to capture the correct population. Refer to Figure 6.5 for an example of the default movement setting. Refer to Figure 6.6 for an example of the maximum movement setting.

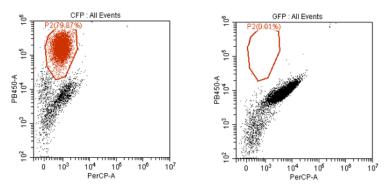

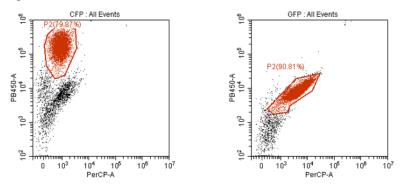

Figure 6.6 Movement - Max Setting

Extent — Shrinks or expands the gate around the population.

To adjust extent, right-click an autogate and drag the Extent handle in the auto gate menu left and right.

		Edit Name			
		Color 🗾 🔻			
		Apply to All Tubes			
	\checkmark	Auto Recalculate			
		Movement:			
Γ		Extent:			
		Сору			
		Delete			

NOTE The default value setting for extent is 20 units. The minimum value setting for extent is 0 units and the maximum value setting for extent is 100 units.

Refer to Figure 6.7 for an example of the default extent setting. Refer to Figure 6.8 for an example of the maximum extent setting.

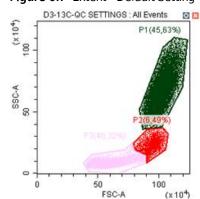

Figure 6.7 Extent - Default Setting

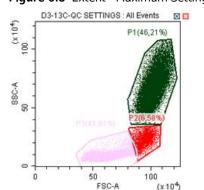

Figure 6.8 Extent - Maximum Setting

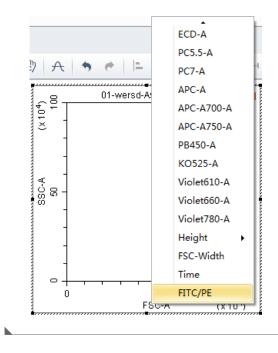

Setting Customized Parameters

Set custom parameter to create fluorescence calculations.

1 Select **Set Customized Parameter** from the Settings menu. Or, right-click a test tube from the test tube menu and select **Set Customized Parameter**. The Set Customized Parameter window appears.

Set Customized Param	eter - Blank+ST+UO26	6	\searrow		23
Name	Parameter	Oper	Parameter	Oper	Modifier
FITC/PE	= (B525-FITC-A 🔻	/ -	Y585-PE-A	▼) * ▼	1.00
	= (/ -		▼) * ▼	1.00
Apply to:					
◉ Current Tube ◯ All Tubes			ОК	Cancel	Apply

- 2 Enter a name for the parameter in the Name section.
- **3** Select the parameters for calculation in the Parameter dropdowns.
- **4** Select the equation operations from the Open dropdown menu.

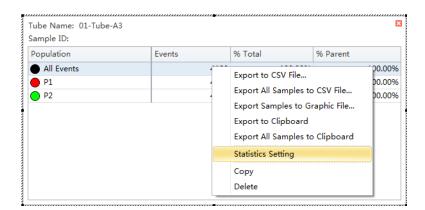

The new parameter name is displayed in the list of parameters and statistic items.

Setting Custom Statistics

Set custom statistics to create calculations based on populations of interest.

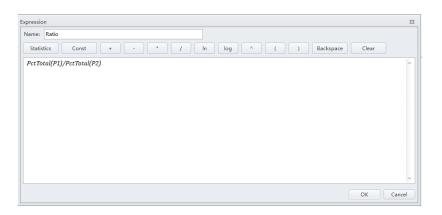

1 Right-click the statistics table and select **Statistics Setting**. The Statistics Setting window appears.

Configuring Acquisition Settings

Changing the Tube Name

To change the name of a new sample tube or the sample ID, right-click the tube name or the sample ID name in the Tube section of the screen and select **Edit Name** or simply double-click the sample tube or sample ID name.

Laser Settings

To access the Laser Setting window, select **Advanced > Laser Setting**. The Laser Setting window appears. Refer to Figure 6.9.

NOTE The instrument must be in Standby mode to access the Laser Setting window.

aser Setting					Σ
Laser	Enable/Disable	Target Power(mW) /	/	Actual Power(mW
NUV	🧿 Enable 🔘 Disable	0	Set	Read Power	-
Blue	🔘 Enable 🧿 Disable	0	Set	Read Power	-

IR	🧿 Enable 🔘 Disable	0	Set	Read Power	-

Figure 6.9 Laser Setting Window [CytoFLEX LX shown]

- 1. Enable/Disable: Enables or disables the laser.
- 2. Target Power (mW): Used to change the laser target power.
 - **NOTE** Laser target power can only be adjusted on the CytoFLEX LX system. The power detector has ± 1 mW tolerance. Refer to Table 6.1 for the target power ranges allowed in the Laser Setting screen.
 - **NOTE** Refer to the target powers listed for each laser in the QC reports area of the QC Report Screen (refer to Figure 2.2) for range limits.
- 3. Set : Sets the laser target power setting.

IMPORTANT The Actual Power readings are +/- 1 mW.

4. Read Power : Reads the current laser power before the flow cell assembly and displays the current laser power in the Actual Power (mW) column of the Laser Setting window. Refer to Table 6.1 for a list of laser ranges.

Laser	Min Power (mW)	Max Power (mW)
355	19	21
375	51	69
405	71	119
488	41	59
561	21	39
638	41	59
808	51	69

Table 6.1	Target Power	Ranges in the	Laser Setting Screen
-----------	--------------	---------------	----------------------

Select the **Enable** or **Disable** radio button next to each laser on the Laser Setting window to enable or disable lasers. The laser status for each laser displays in the software status bar. Hover your

mouse over 📑 Lasers to display details for each laser.

NOTE Lasers can only be enabled and disabled when the system is in standby mode.

Setting Laser Target Power Settings [CytoFLEX LX Only]

IMPORTANT When you change the laser target power, it will impact all of your results including QC and standardization.

- 1 To access the Laser Setting window, select **Advanced** > **Laser Setting**. The Laser Setting window appears.
- 2 Ensure that all desired lasers are enabled.

NOTE If a laser is disabled on an experiment that requires that laser, the following message appears:

Warning	23
	The lasers listed below are disabled. The related channels of the current detector configuration cannot acquire data. Blue

3 Select **Read Power** to view the real-time laser power reading.

The laser power displays under the **Actual Power (mW)** column located in the far right section of the Laser Setting window.

- **4** Adjust the target power for each laser as needed.
- **5** Select **Set** to set the device power.

6 Standardize your laser target values in the QC Experiment. Refer to CHAPTER 5, Standardization.

NOTE Disabled lasers are marked *Laser XXX is disabled* in the QC screen and do not provide laser power values.

Adjusting the Gain

While the instrument is in use, the signal value can be increased or decreased by adjusting the instrument's gain configuration.

1 Select 🔀 Acq. Setting... on the left side of the screen. The Acq. Setting window appears.

2 Select the Gain tab in the Acq. Setting window.

Select or edit the instrument's default gain settings using one of the following methods:

- Edit the gain settings and select Set as Default to create a new default setting.
- Select **Default** to return to your saved default settings.
- Select **QC Gain** to use the instrument's QC settings.
- **NOTE** In cases where you do not specify your own default parameters, the QC settings and default settings are identical.

3 Adjust the gain setting of each channel under the Gain tab in the Acq. Setting window. Raising the gain increases the signal. Lowering the gain reduces the signal.

Acq. Setting - sta	in index	23
Gain Thresho	old Width	
FSC	1100 📜 🕨 (1~3000)	
SSC	500 🗘 🕨 🔤 00)	
FITC	1000 🗘 🕨 🛛 00)

חר	204 * 11 2000	-
Set As Default	Default QC Gain	
Import from F	ile Import from Catalog	
Export to File.	Export to Catalog Close	•

NOTE Optimize the gain settings according to your own experimental goals. The QC Gain values are only for reference.

Another option is to use the **Gain Control** button on the tool-bar in the graphic control area to adjust the gain values for cell population data to their desired levels, directly on the plots where the data appears during data collection.

NOTE Gain adjustments have a predefined range between 1 and 3,000.

4 If necessary, change the coordinate display range and the plot type.

Adjusting the Threshold

By adjusting the threshold, the user can remove unnecessary signal noise to ensure that most of the data collected consists of desired signal data. After the threshold settings have been configured for a given channel, the acquisition of data from this channel will only be triggered by signals that exceed the established threshold. Threshold settings have considerable bearing on whether the appropriate events can be acquired.

1 Create a plot to view the channels where the threshold will occur. Generally, a bivariate plot showing FSC and SSC is used.

NOTE Threshold can be defined for any of the fluorescence channels.

- 2 Select $\times Acq. Setting...}$ on the left side of the screen.
- **3** Select the **Threshold** tab in the Acq. Setting window.

	ting			Σ
Gain	Threshold	Width		
Prim	ary Threshol	d (Trigge	er Level)	
Chanr	nel: FSC		•	
0 M	anual	5000	(>0)

Logic (Operator:		Ŧ	
Seco	ndary Thresh	hold (Trig	gger Level)	
Chanr	nel:		-	
() () ()	anual	1	(>0)	
O Au	tomatic			
				Default
Impo	rt From File	. Imp	port From Cata	

- **4** Set the desired threshold using one of the following methods:
 - Choose the channel that is used for setting the threshold. Manually enter the threshold value in the Threshold tab.

NOTE For dual-parameter plots, you can right-click the plot and select both parameters if desired. Then, select the desired threshold boundary for the second parameter.

- Select **Automatic** in the Primary Threshold Trigger Level section of the Acq. Setting screen to seek the target signal based on the background signal. It can quickly help find the target population if the signal-to-noise ratio (SNR) of the channel is comparatively good. The threshold can be set to either "H" (signal height) or "A" (signal area).
 - **NOTE** The automatic threshold value is based on the relative signal difference. When adjusting gain, you do not need to update the threshold settings. For channels with a low SNR or an excessively impure signal, manually setting the threshold parameters is recommended.
 - **NOTE** It is recommended to use **Manual** mode to set the threshold parameters to obtain accurate experiment data.

Moreover, "and" as well as "or" can be applied to as many as two channels, so as to allow these Boolean logical operators to be used in setting the threshold value.

- "and": Data is displayed and collected only when two threshold conditions are met simultaneously.
- "or": Data is displayed and collected when at least one of two threshold conditions are met.
- Select A from the plot control area. Move your mouse pointer to the desired threshold position in the desired plot and select once.
- 5 Select Close.

Setting Collection Conditions

1 Check mark the conditions required to set the necessary stop count events on the left side of the Acquisition screen.

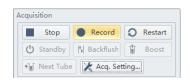

Three stop count collection conditions are available for sample recording:

- Events to Record. Used to set the number of events to record in the specified population.
- **Time to Record**. Used to set the collection time duration in seconds.
- Volume to Record. Used to set the collection volume in µL.

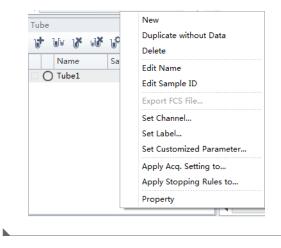

For example, if the event to record is set to record 1,000 P1 events, the software automatically stops recording when P1 events reach 1,000 events. However, the software saves all data acquired, including events outside of P1, when 1,000 P1 events is reached. You can also specify the time to store if necessary. When multiple acquisition conditions are established, any one of these conditions stops the collection process.

Events to Display:	500000	Events
Events to Record:	3000	Events
in	P1	~
☑ Time to Record:	600	Sec
Volume to Record:	10	μL

2 Select **Record** and wait for the software to complete collecting the data, at which time the sample tube holder returns to the sample loading position (see Figure 1.12).

3 If you made changes to the data acquisition conditions and need to apply these changes to an established sample tube, right-click the sample tube and select **Apply Acq. Settings To**, to apply the conditions accordingly.

Setting Plot Display Conditions

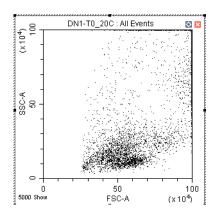

Select Events Display Setting in the Settings menu. The Events Display Setting window appears.

Events Display Setting	23
When displaying plots:	
Oisplay all events	
🔘 Display first	5000 🗘 events acquired
🔘 Display 🛛 🗯	percent of events acquired
ОК	Cancel Apply

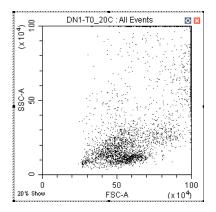

Three display options are available:

- Display all events. Used to view all events on the plot.
- **Display first XXXX events.** Used to set the set number of events to display.

NOTE The selected number of events displays in the bottom, left corner of the plot. For example, if you choose to show 5000 events, the bottom, left corner of the plot displays *5000 Show*.

- **Display XX percent of events acquired**. Used to set the percentage of events to display.
 - **NOTE** The selected percentage of events displays in the bottom, left corner of the plot. For example, if you choose to show 20 percent of events acquired, the bottom, left corner of the plot displays 20% *Show*.

Load Sample and Record Data

Before Running Samples

CAUTION Risk of erroneous results if the Cytometer has been idle for an extended period of time. Perform a prime if the system has been idle for an extended period of time (see CHAPTER 12, Priming the Flow Cell.) 1 Run the Daily Startup procedure. 2 Run the Instrument Quality Control and Standardization procedure. Create an experiment. Refer to Creating an Experiment. 3 4 Verify mixer settings. Refer to CHAPTER 12, Changing Sample Mixing and Backflush Settings. 5 Ensure that there is sufficient space on your hard drive for sample processing and data acquisition. Verify the detector configuration. Refer to Verifying, Selecting, Editing, and Creating Detector 6 Configuration. Verify the laser settings. Refer to CHAPTER 6, Laser Settings. 7

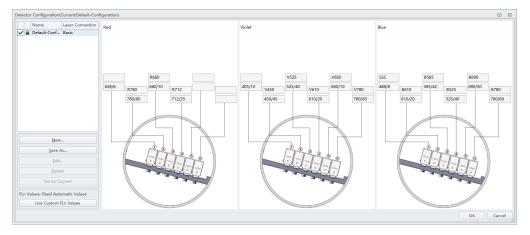

Verifying, Selecting, Editing, and Creating Detector Configuration

Risk of erroneous results. The system will read the selected Detector Configuration even if the optical filters do not match the selected Detector Configuration. You must verify the installed optical filters match the selected Detector Configuration.

- **1** Select **Detector Configuration** in the Cytometer menu to verify the correct detector configuration is selected. To change the configuration:
 - a. Select the desired configuration.
 - b. Select Set as Current.

A green checkmark appears in front of the selected configuration.

[CytoFLEX Shown]

NOTE A configuration is locked when appears to the left of a configuration. A configuration locks for two reasons:

- QC was run using the configuration.
- The compensation library contains data for the configuration.

Locked configurations can be deleted. Locked configurations can only be edited when the custom FLn value mode is enabled.

- **2** Select **OK** to close the Detector Configuration screen.
- Proceed to Step 4 if you need to edit the Detector Configuration settings, or skip to Step 5 if you need to create a new Detector Configuration, or skip to Step 14 if you need to delete a Detector configuration. Skip to Step 7 if you need to use custom FLn value mode, or skip to Step 8 if you need to use automatic FLn value mode.

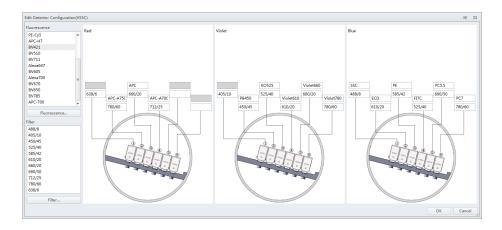

4 If a saved configuration requires changes, edit that configuration.

NOTE The factory configuration is in bold and cannot be edited.

a. Select the configuration, then select Edit to access the Edit Detector Configuration screen.

New
Save As
Edit
Delete
Set As Current
FLn Values: Fixed Automatic Values
Use Custom FLn Values

b. Channels with a white background can be edited. Drag the names of the appropriate fluorescence channels and optical filters on the left to the correct channels.

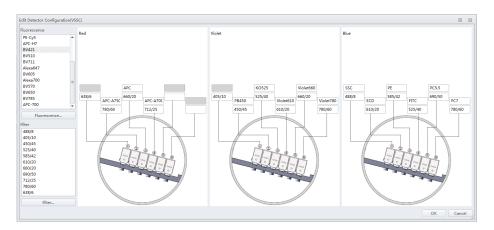

- **c.** Continue to Step 6.
- **5** If an appropriate configuration is not saved, create a new configuration.
 - a. Select Detector Configuration... in the Cytometer menu.
 - **b.** Select **New**... and name your configuration.

You can also select a previously saved configuration and select **Save As** to create a copy.

c. Select OK.

d. Ensure the new configuration is highlighted, then select **Edit**. The Edit Detector Configuration window appears.

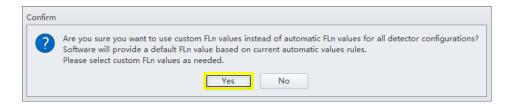

- **e.** Customize the new configuration. Channels with a white background can be edited. Drag the names of the appropriate fluorescence channels and optical filters on the left to the correct channels.
- **f.** Continue to Step 6.
- **6** If a required channel name or filter is not listed on the left, select **Fluorescence** or **Filter** to add or modify the channel name or the filter.

	Are you sure you want to delete the configuration?
	Yes

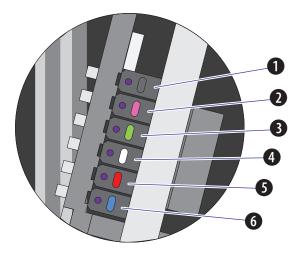

Setting Up Violet Side Scatter (VSSC) Channel

For microparticles, a VSSC option can be added to better separate side scatter signals from noise. Beckman Coulter recommends using this channel to detect particles smaller than 500 nm.

NOTE Since the total available channel numbers remain the same when the VSSC channel is used, the number of fluorescent channels in the violet WDM is reduced by 1 channel.

Risk of erroneous results. Beckman Coulter recommends using the VSSC channel to detect side scatter signals for particles smaller than 0.5 μ m. VSSC could be too sensitive when large particles are being acquired. Switch back to the original detector configuration for particles larger than 5 μ m. For particles larger than 5 μ m, set the gain of the VSSC to 1 to increase the threshold and decrease the collection of sample noise.

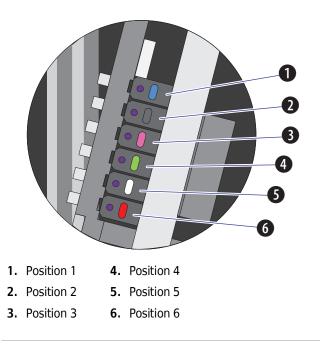

1 Open the Violet WDM lid (see CHAPTER 12, Replacing the Optical Filter) and remove the 405 nm filter, the 450 nm filter, and a third filter not required for the test, for example, the 780 nm filter.

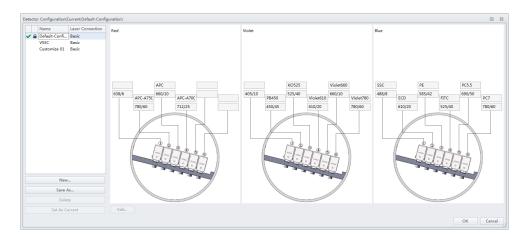

NOTE Refer to Table 6.1 to identify the WDM filter mount color codes.

- **1.** Position 1 **4.** Position 4
- 2. Position 2 5. Position 5
- **3.** Position 3 **6.** Position 6
 - **NOTE** The orientation for position 1 through 6 starts with position 1 located closest to the fiber coming into the WDM, and position 6 located on the side furthest from the fiber coming into the WDM.

- **2** Place the third filter in position 1, the 405 nm filter in position 2, and the 450 nm filter in position 3.
 - **NOTE** For the Violet WDM, Beckman Coulter recommends placing the filters in sequential order from the shortest wavelength to the longest wavelength in positions 2 to 6. Position 1 will always contain the unused filter.

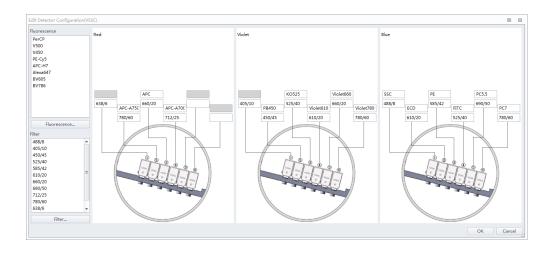

- **3** Start the CytExpert software. Refer to CHAPTER 4, Logging into the Software.
- **4** Select **Detector Configuration** from the Cytometer menu. The Detector Configuration window appears.

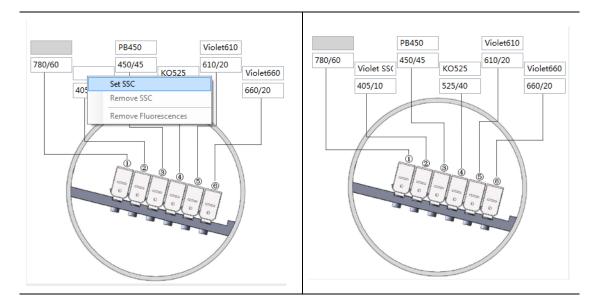

5 Select the Default Configuration and select **Save As**. The Configuration Save As window appears.

The Confi	guration Save As	23
Name:	VSSC	
	OK Cano	el

- **6** Name the new configuration VSSC and select **Οκ**.
- 7 Select the VSSC configuration and select **Edit**. The Edit Detector Configuration window appears.

8 Change the filters and channel names according to the filter order in the violet WDM.

9 Right-click the VSSC channel, and select **Set SSC** to set it as the Violet SSC channel.

10 Select **OK** to save the changes and close the Edit Detector Configuration window.

11 Select **Set as Current**.

12 Select **OK** to save the changes and close the Detector Configuration window.

13 Create a new experiment using the VSSC configuration. Refer to Creating an Experiment.

Sampling and Collecting Data [Without Plate Loader]

NOTE Settings can be imported from the Acquisition Settings Catalog. Refer to Importing and Exporting Instrument Settings.

If compensation settings are desired, import the compensation from the Compensation Library or import the compensation file. Refer to CHAPTER 7, Importing and Exporting Compensation.

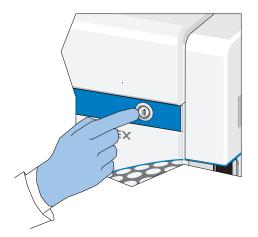

1 Select if from the Test Tube screen to create the new sample tube.

NOTE The first sample tube is already created by default.

- **2** Change the tube name if necessary. Refer to Changing the Tube Name.
- **3** Mix the sample tube intended for testing.
- **4** Ensure that the sample tube holder is in the sample loading position (see Figure 1.12). If the sample tube holder is not in the sample loading position, select **Initialize**.

Risk of biohazardous contamination. When using 1.5-mL and/or 2-mL sample tubes, always cut the cap off and do not exceed 300- μ L sample volume. Running samples with a cap attached to the sample tube or with volumes exceeding 300- μ L can result in sample splashing.

- **5** Place the sample tube in the sample tube holder.
- **6** Select the desired acquisition parameters (Events/Time to Record/Volume to Record and Sample Flow Rate) on the left side of the screen.
 - **NOTE** You can also push the load button on the front of the instrument to automatically start the run and record the data.

7 Select **Run** to load the sample.

NOTE When you select a tube that only contains acquired data, as indicated by the blue tube \bigcirc in the test tube section of the screen, the following message appears:

Confirm	23
The current tube already contains data. Would you like to: © Create a new tube	
◯ Overwrite the data	
ОК	Cancel

- Create new tube. Saves the current tube and creates an additional tube.
- **Overwrite the data**. Overwrites the current tube data with new data.
- **8** View the plots and establish the gates. Refer to Creating Plots and Gates. Adjust the gate and instrument settings as necessary. Refer to Configuring Acquisition Settings.
- **9** Adjust the gain settings. Refer to Adjusting the Gain.
- **10** Adjust the threshold settings. Refer to Adjusting the Threshold.
- **11** Adjust the Acquisition conditions. Refer to Setting Collection Conditions.
- **12** Select **Record** to save the data.

Wait for the saving process to finish. The sample tube holder returns to the sample loading position (see Figure 1.12).

NOTE When you select a tube that contains recorded data, as indicated by the green tube **()** in the test tube section of the screen, the following message appears:

Confirm	23
The current tube already contains recorde	d data. Would you like to:
○ Append data to existing file	
	OK Cancel

• **Create a new tube.** Creates a new tube in the test tube section of the screen for the data.

- Append data to existing file. Adds new data to the existing data.
- **NOTE** When you select a tube that only contains acquired data, as indicated by the blue tube \bigcirc in the test tube section of the screen, the following message appears:

Confirm		×				
The current tube already contains data. Would you like to:						
◯ Create a new tube						
Overwrite the data						
Append data to existing file						
Events to Record:	Events to Record: 10000 Events					
in	All Events	-				
☑ Time to Record:	600	Sec				
Volume to Record:	10	μ				
		OK Cancel				

- Create a new tube. Creates a new tube in the test tube section of the screen for the data.
- Overwrite the data. Overwrites the current tube data with new data.
- Append data to existing file. Adds new data to the existing data.

13 Repeat Steps 1-12 until all sample tube data required for testing has been collected.

NOTE If the rate suddenly appears to drop, check to see if the sample has run dry or the sample probe is clogged. Any time the sample probe becomes clogged, immediately select **Stop** to unload the sample. Then select **Backflush** to clean the sample probe. Refer to CHAPTER 11, Daily Clean to flush out the sample probe. If you are still unable to clear the sample probe, contact us.

Sampling and Collecting Data [With Plate Loader]

IMPORTANT Ensure the sample plate is loaded properly before acquiring the samples.

- **1** To run a single well:
 - **a.** Select the well in the Plate window.
 - **b.** Select **Run** to prompt the system to begin sample aspiration.

NOTE Acquisition settings can be adjusted during acquisition.

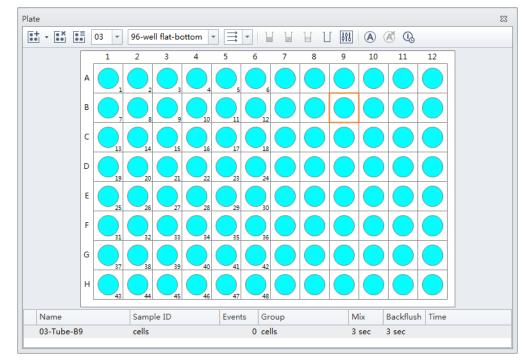

- c. Select Record to save the data.
- **d.** Select **Eject** to prompt the plate loader to eject.

To run a set of wells:

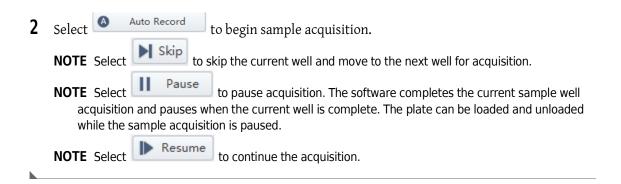

a. Select the desired wells.

b. Select Or right-click and select **Auto Record** to set the selected wells for auto record. Number labels appear in the bottom right corner of each well set for auto record. Sample acquisition occurs in the order indicated by the numbers.

NOTE Select *in the selected wells.*

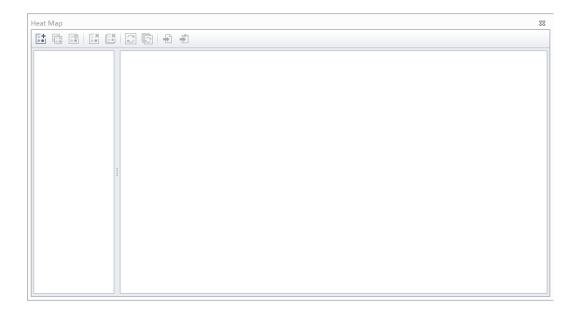

Creating a Heat Map [with Plate Loader]

IMPORTANT The heat map function is only available in plate mode.

1 Select **Select** from the Tube management controls (refer to CHAPTER 2, Test Tubes). The Heat Map window appears.

2 Select 📑 from the Heat Map window. The New Heat Map window appears.

ame: blor Mode:) © Same setting	g for all parameters		ifferer	ot cettir	as per p	arar	meter	[Disp	olay N	lame	Plate:	01

- **NOTE** Select **Display Value** to display the value within the heat map well on the Heat Map window. Display Value is only selectable when using a single parameter.
- **3** Enter the heat map name, select the Display Name checkbox if you want the name to display in the heat map view, and select the heat map data set from the Plate drop down menu.

Name:	Heat Map 1	🔲 Display Name	Plate:	01 🔹	

NOTE The plate drop down menu only displays plates that contain data.

4 Select the desired color mode.

Color Mode: 💿 Same setting for all parameters 🔘 Different settings per parameter

NOTE Select **Same setting for all parameters** to use the same color for all parameters. Select **Different settings per parameter** to use different colors for different parameters.

5 Select Add to add a parameter item to the Parameter section of the New Heat Map window.

lo.	Expression	Label	Use Custom Range	Min	Max	Actual Range

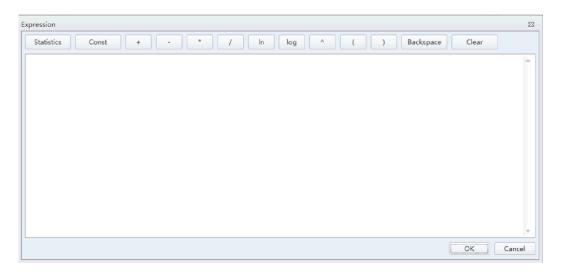

NOTE A maximum of 6 parameters can be added to a single heat map.

NOTE Select a parameter then select **Delete** to c following message appears.

Confirm	
?	Are you sure you want to delete the selected heat map parameter?
	Yes No

- **6** Change the Parameter elements in the Parameter section of the New Heat Map window.
 - **a.** Change the Label name if needed.
 - **b.** Select in from the Statistic Expression section of the Parameter list. The Expression window appears.

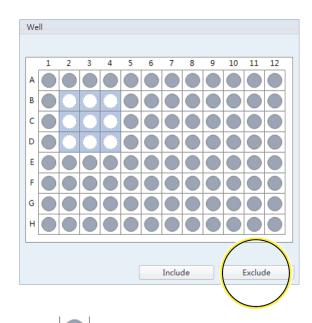

- **c.** Enter the desired expression for the selected parameter then select **OK**. The Actual Range displays in the Parameter section of the Heat Map window.
- d. Select the Use Custom Ranges checkbox if needed and enter the Min and Max ranges.

NOTE The Actual Range displays when the statistics parameter can be calculated.

7 Select any wells that should be excluded from the heat map in the Wells section of the New Heat

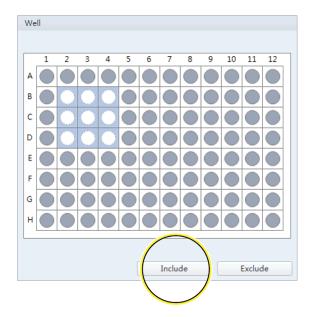

Map window then select Exclude

designates that a well is included. All wells are included by default.

NOTE designates that a well is excluded. Select any wells that should be included and select Include

- **8** Edit the color elements in the Color section of the New Heat Map window.
 - **a.** Select a color from the base color drop down menu.

Color
Base Color: Bands: 5 ‡ (2-10)
Percentile Fixed Range
No Maxin imit No Minimum Limit
80 2 %
60 2 %
40 2 %
20 🗘 %
0 ‡ %

b. Select the number of color bands desired from the Bands drop down menu. The window refreshes to display the appropriate number of bands.

Color
Base Color: Bands: 4 (2-10)
● Percentile ○ Fixed Range
🖸 No Maximum Limit 🛛 No Minimum Limit
100 2 %
77 1
- 75 ‡ %
25 1 %
0 ‡ %

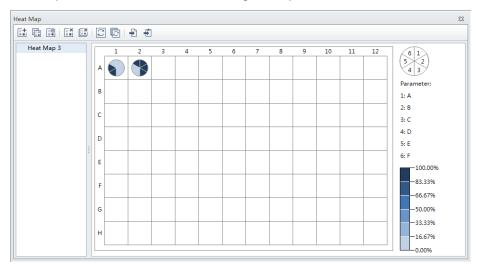

NOTE You can choose between 2 and 10 color bands.

- c. Select Percentile to assign colors based on a percentage range.
 - **NOTE** If **Use Custom Range** is selected, the percentile is calculated according to "Min" and "Max". If **Use Custom Range** is not selected, the percentile is calculated according to "Actual Range".

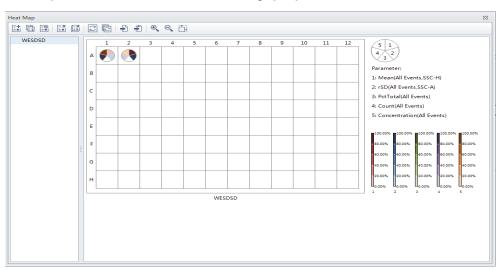

Or

Select **Fixed Range** to assign colors based on a fixed range specified by the user. The heat map is created directly based on the result of the expression. The color of the heat map displays according to the legend range.

- **NOTE** Fixed Range can only be used with one parameter.
- **NOTE** If **Different settings per parameter** is selected, repeat Steps a-c to assign the color setting to each parameter.
- **9** Select **OK**. The New Heat Map window closes to display the Heat Map window.

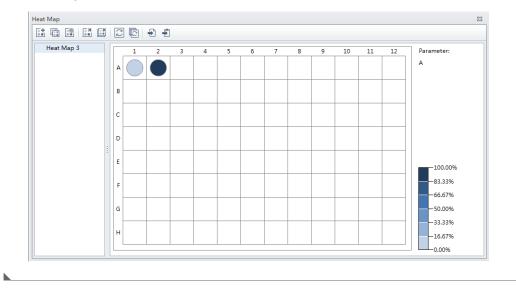

Heat Map with 6 Parameters [Same setting for all parameters]

Heat Map with 6 Parameters [Different settings per parameter]

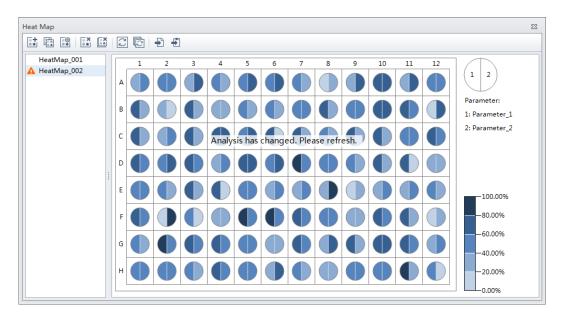

NOTE When viewing more than one parameter, the parameter location relative to the pie chart is visible in the top, right corner of the Heat Map screen.

Heat Map with 1 Parameter

Refreshing a Heat Map

When data displayed in a heat map is no longer current, the 🛕 symbol appears next to the heat map name and the message Analysis changed. Please refresh. appears on the Heat Map window.

Select *Select* from the heat map toolbar to refresh the analysis.

Modifying Existing Heat Map Settings

Select from the heat map toolbar to modify existing heat map settings. The Modify Heat Map Settings window appears.

Deleting an Existing Heat Map

To delete a single heat map, select the heat map to be deleted from the list of heat maps in the Heat

Map window then select 📑 from the heat map tool-bar.

To delete multiple heat maps, select if from the heat map toolbar. The Delete Multiple Heat Maps window appears.

Delete Multiple Heat Map		23
Heat Map 1		
Heat Map 2		
Select All	OK Cancel	

Select the heat maps to be deleted then select **OK**.

NOTE The Select All checkbox allows you to delete all of the heat maps listed.

Exporting a Heat Map

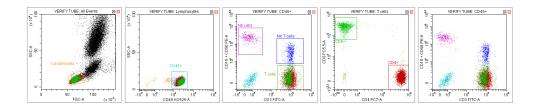

Heat maps can be exported as a graphics file (.bmp or .emf) or to a clipboard (.bmp).

To export a heat map as a graphics file, select 🔂 from the heat map toolbar.

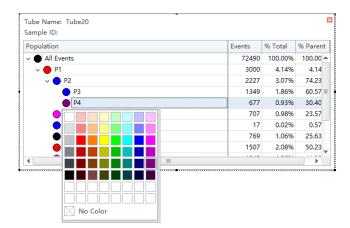

To export a heat map to a clipboard, select 🛐 from the heat map toolbar.

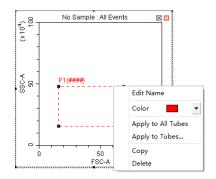

Analyzing and Exporting Data

- **1** Select the sample tube to be analyzed.
- **2** Establish new gates or adjust the position of existing gates. Refer to Creating Plots and Gates.

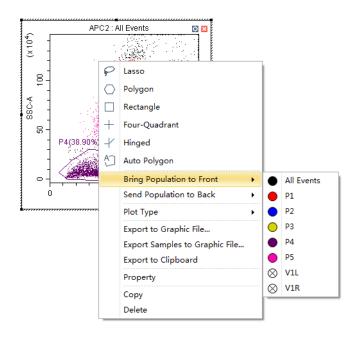

- **NOTE** Changing a gate's position does not affect the positions of other gates already established on a given sample tube. Each test tube individually records the positions of its associated gates. If you need to make a change that concerns all the tubes, you must select the gate, then right-click the correctly positioned gate and select **Apply to All Tubes**.
- 3 Select 🕒. The Gate Hierarchy screen appears.
- **4** Check the relationship between the parent and daughter gates in the Gate Hierarchy window.
 - **NOTE** Newly added gates become subsets of populations displayed in plots with existing gates. Name and display color can be modified. Right-click directly on a gate plot to change the name and color.
 - **NOTE** Select **No Color** to leave the gated events uncolored while retaining the color of the parent populations. By default, the populations defined by a vertical gate, hinged gate, or four-quadrant gate are uncolored.

5 Right-click the plot and select **Bring population to front** to make the display color of the specified gate appear in front of all other colors, or select **Send population to back** to hide the display color of the specified gate behind all other colors.

- **6** Select **in the plot area to generate a statistical table.**
- **7** Right-click the table and select **Statistics Setting** to modify the settings of the statistics display parameters. The Statistics Setting window appears.

			Delete

- **Export to Clipboard** copies the plot to the clipboard, allowing you to paste it directly into documents in common file formats.
 - **NOTE** Multiple plots can only be copied and pasted into Microsoft Word. If a single plot is copied, this can be pasted into both Microsoft Word or Microsoft PowerPoint.
- Export to Graphic File saves the plot as an image file.
 - **NOTE** Export to Graphic File can export plots in two selectable file formats. BMP bitmap format and EMF vector format.

9 To export statistics, right-click a statistical table to select any one of the available export options.

- Export to CSV File exports individual tube statistics as a single CSV file.
- Export All Samples to CSV File exports all tube statistics as a single CSV file.
- **Export to Clipboard** copies the statistics of an individual sample to the clipboard, allowing you to paste them directly into a Microsoft Excel file or other file formats.
- **Export All Samples to Clipboard** assembles the statistics for all the sample tubes of an experiment and copies them together to the clipboard. From there they can be pasted as a group into a Microsoft Excel file or other file formats.
- **Copy** converts a statistical table into an image format that can be pasted into documents.

10 Export the FCS file if necessary. Refer to Exporting FCS Files.

NOTE Ensure that any storage devices used with the instrument are free from viruses. To guard against data loss, Beckman Coulter recommends backing up data on a frequent and regular basis. Beckman Coulter is not liable for any loss of data resulting from computer viruses or damage to hardware.

Exporting FCS Files

Exporting Single Tube Files

1 Right-click the desired tube from the test tube section of the screen and select **Export FCS File**. The Export FCS File window appears.

- **NOTE** The default CytExpert FCS file contains high auto-fluorescence vector values that may not be recognized by third party software. Therefore, the data displays differently in third party software packages than in CytExpert. Auto-fluorescence values are added for the FCS 3.0 (High auto-fluorescence) export option to accommodate the use of third party software. Since both FCS 3.0 options have the same .fcs file extension, ensure that you save the FCS 3.0 (High auto-fluorescence) files to a different folder than the FCS 3.0 files.
- **5** Select the path to save the FCS file to from the Path section of the window.
- **6** Select **Next** to export the file.

Exporting Multiple FCS Files

1 Select **Export FCS File** from the File menu. The Export FCS File window appears.

tep1:	Select	tubes.

3 Select the desired tubes to export.

- **4** Select the path.
- 5 Select OK.

NOTE The plots of the selected tubes save as .bmp file.

Importing and Exporting Instrument Settings

The CytExpert software supports importing and exporting instrument settings to facilitate the experiment process. Only instrument settings identical to the current configuration can be imported with current detector settings.

Select \bigwedge Acq. Setting... to edit gain, threshold, and width. These can be imported from an experiment file or from a catalog of instrument settings.

Importing Instrument Settings

1 Select the desired sample tube to import. Then select \Join Acq. Setting.......

NOTE Instrument settings can only be imported into tubes where data has not yet been recorded.

2 Select Import From File, locate the file with the required instrument settings, or select Import From Catalog to import the instrument settings.

[CytoFLEX LX Shown]

3 Select Close.

Exporting Instrument Settings

- 1 Select the desired sample tube to export. Then select \swarrow Acq. Setting...
- 2 Select Export To File to export a current set of instrument settings, stored in a file ending in .acq. Or

Select **Export To Catalog**, give a name to the settings to be exported, and export the file to the software's Acquisition Setting Catalog, then select **OK**.

3 Select Close.

Importing and Exporting Compensation Settings

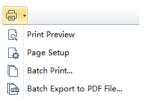

The software supports unrestricted importing and exporting of compensation data, regardless of whether the sample tube data has already been acquired. Imported compensation values only cover channels identical with the current instrument configuration. The software automatically adjusts compensation values according to differences in the gain level. Refer to CHAPTER 7, Importing and Exporting Compensation.

Printing Graphics

CytExpert offers printing functionality for the plots and tables that appear in the plot area. The software also lets you save these images by converting them into .jpg or .pdf files.

•

Select in the printer control area to print directly. Or, select the print drop-down arrow for the following options:

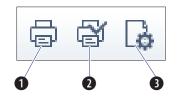

Print Preview. Used to access the Preview screen.

$ \begin{array}{c} \hline \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ $	

Select is select the required format of the file to be exported and to save the file in that format.

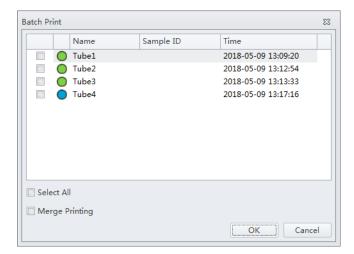

Print preview also lets you choose between printing directly (1), modifying the printer configuration (2), or adjusting the page settings (3).

• **Page Setup**. Used to adjust the page settings.

- **Batch Print.** Used to print data for multiple tubes.
- 1. Select Batch Print. The Batch Print window appears.

- **2.** Select the tubes to print.
- 3. Select OK.

•

- Batch Export to PDF File. Used to print a PDF of the data for multiple tubes.
 - 1. Select **Batch Export to PDF File**. The Batch Export to PDF File window appears.

Name	Sample ID	Time	
) Tube1		2018-05-09 13:09:20	
) Tube2		2018-05-09 13:12:54	
) Tube3		2018-05-09 13:13:33	
Tube4		2018-05-09 13:17:16	

- **2.** Select the tube to print to PDF.
- 3. Select OK.

Saving the Experiment

Selecting **Save** in the File menu allows you to save the experiment.

Selecting **Save As** and saving the experiment under a different name allows you to create a backup.

Selecting **Save As Template** in the File menu allows you to save the experiment as a template.

Concluding the Experiment

Conclude the experiment as follows:

- Select **Standby** to return the instrument to the standby state.
- Select File > Close Experiment to clear the experiment and return to the Start Page.

NOTE If changes were made to the experiment, the software prompts you to save the latest changes in the experiment before returning to the Start Page.

• Shut down the system. Refer to CHAPTER 9, Daily Shutdown.

CHAPTER 7

Overview

This chapter describes how to create a compensation experiment and automatically calculate compensation values after acquiring the data. It also explains how to use these calculations for other experiments.

Compensation involves correction for fluorescence spillover emitted by the primary fluorochrome that is detected by the secondary fluorescent channels. For example, the excitation and the resulting fluorescence emission for the PE fluorochrome leads to the spillover fluorescence detected in the ECD, PC5.5, and PC7 channel. Compensation reduces the spillover fluorescence of the PE-positive population to match the background of the PE-negative population in the secondary channels. Compensation requires a single positive and a negative population for every single color sample.

Properly configured compensation minimizes false data interpretation caused by spillover fluorescence from another fluorochrome. Refer to Figure 7.1 and Figure 7.2 for an example of plots before and after compensation. Compensation adjustments can be completed during the data acquisition process or after the data acquisition process is complete.

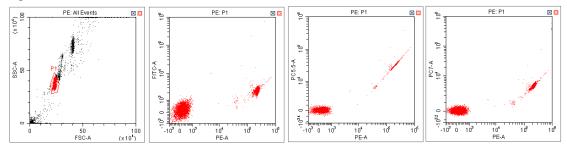

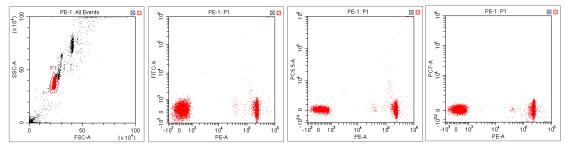

Figure 7.1 Before Compensation

NOTE CytExpert compensation allows full matrix compensation, manual, and automatic.

CytExpert compensation also includes a novel Compensation Library for storage of spillover values of dyes to easily determine the correct compensation matrix with new gain settings.

Workflow:

This chapter contains information on:

- Creating a Compensation Experiment
- Creating a Compensation Experiment [With Plate Loader]
- Creating the Compensation Matrix from Previously Acquired Data
- Adjusting Compensation

Creating a Compensation Experiment

Before creating a compensation experiment, you must verify the instrument's detector configuration settings (see CHAPTER 6, Verifying, Selecting, Editing, and Creating Detector Configuration).

1 Select **New Compensation** in the File menu or on the start page to create a new compensation experiment.

NOTE The file name of the newly created compensation experiment has a ".xitc" suffix.

2 Navigate to the desired file path and select **Save**. The Compensation Setup window appears.

CAUTION

Risk of erroneous results. Select an unstained tube, according to which the fluorescence background will be set. If there is not an unstained tube available, then each single color tube must have a negative population.

It is important to specify the appropriate sample type. Otherwise, the background information could be incorrectly calculated and lead to erroneous compensation results.

3 Select the channel requiring compensation calculation and the sample type.

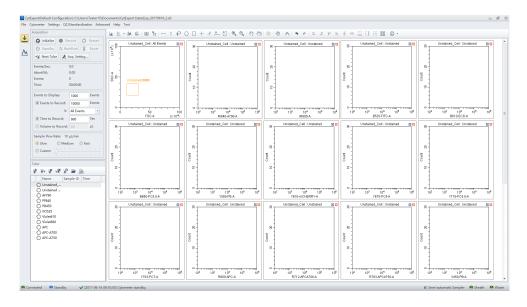

If a negative population is not present in each single color tube, then an unstained control tube is recommended.

- **NOTE** The default selection is **Area**. The unstained negative control tube can be selected if needed.
- **NOTE** Label and lot number information can be retained in the Compensation Library to facilitate future compensation calculations.

Area	O Height				
Use	Tube	Label	Lot No.	Sample T	vpe
1	Unstained_Cell			© Cell	O Bead
1	Unstained_Bead			🔘 Cell	O Bead
1	FITC			Ocell	Bead
1	PerCP			Ocell	Bead
1	APC			Ocell	Bead
1	APC-A700			Ocell	Bead
1	APC-A750			Ocell	O Bead
1	PB450			Cell	Bead
1	KO525			Cell	Bead
1	Violet610			Cell	Bead
1	Violet660			Cell	Bead
1	PE			Cell	Bead
1	ECD			Cell	Bead
1	PC5.5			Ocell	Bead
1	PC7			Ocell	Bead

4 Select OK.

After confirmation, the software automatically generates the following compensation experiment.

NOTE Select **Area** to calculate compensation based on the Area measured. Alternatively, select **Height** to calculate compensation based on the Height measured.

Preparing the Compensation Sample

To perform a compensation experiment, prepare:

- A single positive control tube for each color present in the panel
- A negative control tube (optional)

NOTE A negative control tube is required if a single positive control tube does not contain a negative population.

For the negative control sample and single positive control sample, you can use blood, cells, or dedicated compensation beads such as VersaComp Antibody Capture Beads. For details, refer to the appropriate reagent instructions for use. The negative control tube is used to determine the autofluorescence of the sample.

Using Control Samples to Generate the Compensation Matrix

The design of CytoFLEX system makes Gain independent compensation possible. CytExpert software automatically recalculates the compensation matrix according to gain. Manual adjustment may be applied but not necessary because it may introduce inaccurate results.

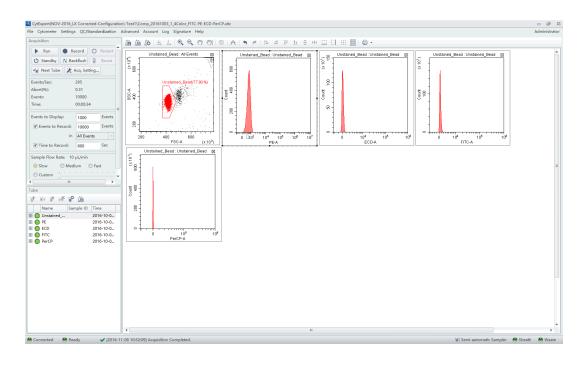

Defining the Negative Population Using Unstained Samples

1 Confirm that the instrument has been initialized. Refer to CHAPTER 4, Initializing the Instrument.

A CAUTION

Risk of erroneous results. Calculations based on excessively small volumes of sampled data can be inaccurate. Ensure that more than 1,000 positive events and more than 1,000 negative events are sampled. If the ratio of positive cells is comparatively low, increase the number of acquisition events to a suitable amount.

2 Import the gain setting and apply the setting to all tubes. Refer to CHAPTER 6, Adjusting the Gain. Use the pan tool to adjust the axis scale so that the sample signal appears in a suitable position. Adjust the gate so that it encloses the target cell population (see CHAPTER 6, Creating Plots and Gates).

- **3** Place the negative control tube in the sample tube holder.
- **4** Select the unstained tube.
- **5** Select **Run** to load the sample.

6 Set an appropriate number of cells to save in Events to Record located on the left side of the screen.

Events to Display:	500000	Events
Events to Record:	3000	Events
in	P1	Ψ.
Time to Record:	600	Sec
Volume to Record:	10	μL

7 Select **Record** to save the data.

Running the Single Positive Control Samples

1 Place the single positive tube in sample loading position (see Figure 1.12).

- **2** Select the appropriate, corresponding tube.
- **3** Select **Run** to load the sample.

Risk of erroneous results. Calculations based on excessively small volumes of sampled data can be inaccurate. Ensure that more than 1,000 positive events and more than 1,000 negative events are sampled. If the number of positive cells is comparatively low, increase the number of acquisition events to a suitable amount.

- **4** Move the gate in the FSC/SSC plot so that it encloses the desired population. Move the positive gate in the plot so that it encloses the positive population. If necessary, move the positive gate so that it encloses the positive population.
 - **NOTE** Figure 7.3 shows an example of selecting the positive population when the negative population is defined by the unstained sample.

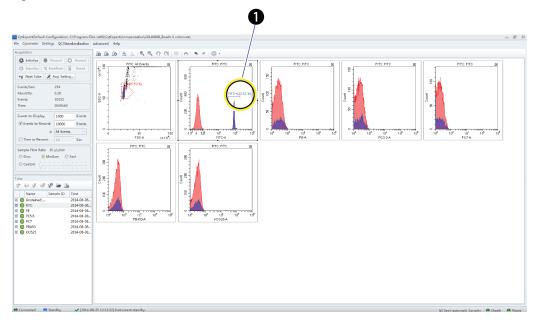

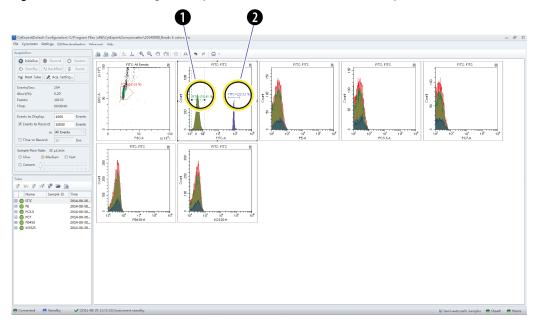

Figure 7.3 Positive Population Selected from the Single-Stained Sample

1. Positive population

NOTE Figure 7.4 shows an example of selecting both the positive and negative populations without an unstained sample.

- 1. Negative population
- 2. Positive population
- 5 Select Record.

6 Repeat Steps 1-5 to acquire data from subsequent single positive sample tubes.

Calculating Compensation Values

1 Check all acquired sample tubes and confirm that the gating is appropriate.S

2 Select a or select **Compensation Calculation** in the Compensation menu to calculate the compensation values.

Setti	ngs	QC/Standardization	Advan

Violet780	0.13	0.23	0.78	4.62	8.40	0.46	2.22	3.72	0.00	12.20	30.20	27.58	

NOTE The primary fluorescence channels are listed in columns; the secondary fluorescence channels are listed in rows.

NOTE In the Compensation Matrix window:

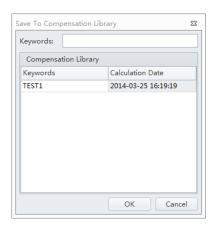

- The Use checkbox applies the compensation to the selected sample.
- The Show Autofluorescence checkbox displays the vectors for the autofluorescence.

NOTE The Compensation range is from -500 to 500 depending on the spillover percentage calculated. The CytExpert software displays the value in either black, or orange, or red as a visual clue.

- Black denotes the value falls within 0 99.99, which is acceptable.
- Orange denotes the value falls within 100 399.99, or -99.99 to -0.01, which requires special attention.
- Red denotes the value is within 400 500 or -500 to -100, which is unacceptable.
- **3** Select **Save As** to export the compensation matrix as a .comp file and specify where to save it.

NOTE The compensation matrix can also be imported for use in other experiments.

- **4** Select **Save To Compensation Library** to save the single color compensation values in the compensation library.
- 5 Specify the key words and select **OK**.

NOTE The settings stored in the compensation library are specific to the detector configuration. The compensation library can only be applied when the detector configurations are the same.

At any time, saved compensation experiments can be reopened and the compensation values recalculated.

6 Select Close.

Creating a Compensation Experiment [With Plate Loader]

Before creating a compensation experiment, you must verify the instrument's detector configuration settings (see CHAPTER 6, Verifying, Selecting, Editing, and Creating Detector Configuration).

1 Select **New Compensation** in the File menu or on the start page to create a new compensation experiment.

NOTE The file name of the newly created compensation experiment has a ".xitc" suffix.

2 Navigate to the desired file path and select **Save**. The Compensation Setup window appears.

3 Select the plate type and sampling sequence located in the top, right of the Compensation Setup window.

Risk of erroneous results. Select an unstained tube, according to which the fluorescence background will be set. If there is not an unstained tube, then each single marker tube must have a negative population.

It is important to specify the appropriate sample type. Otherwise, the background information could be incorrectly calculated and lead to erroneous compensation results.

4 Select the channel requiring compensation calculation, and the sample type.

If a negative population is not present in each single color well, then an unstained control well is recommended.

NOTE The default selection is Area. The unstained negative control well can be selected if needed.

NOTE Label and lot number information can be retained in the Compensation Library to facilitate future compensation calculations.

					✓ Mix 3 sec ✓ Backflush 3 sec

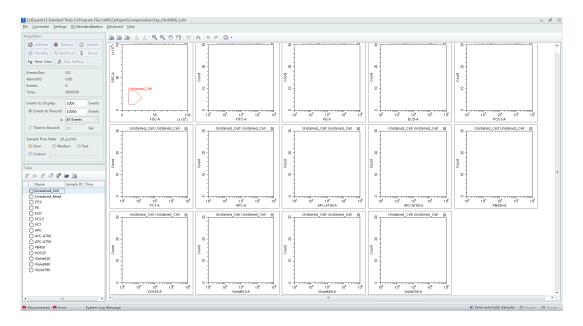

5 Select the Mix and Backflush settings in the bottom, right of the Compensation Setup window.

- **6** Assign the well locations.
 - **a.** Select the fluorochrome.
 - **b.** Select the desired sample well location for the fluorochrome.
 - c. Select Set As Sample Well.

NOTE The well location populates in the location column.

- **d.** Repeat Steps a-c for each fluorochrome.
- 7 Select OK.

After confirmation, the software automatically generates the following compensation experiment.

NOTE Select Area to calculate compensation based on the Area measured. Alternatively, select Height to calculate compensation based on the Height measured.

NOTE If the plate settings require modification, select

8 Before acquiring data, ensure the plate has been loaded properly. Data can be acquired as a single well or as a set of wells. Refer to CHAPTER 6, Sampling and Collecting Data [With Plate Loader].

Preparing the Compensation Sample

To perform a compensation experiment, prepare:

- A single positive control well for each color
- A negative control well (optional)

NOTE A negative control well is required if a single positive control well does not contain a negative population.

For the negative control sample and single positive control sample, you can use blood, cell lines, or dedicated compensation beads such as VersaComp Antibody Capture Beads. For details, refer to the appropriate reagent instructions for use. The negative control tube is used to determine the autofluorescence of the sample.

Using Control Samples to Generate the Compensation Matrix

Refer to CHAPTER 7, Defining the Negative Population Using Unstained Samples and CHAPTER 7, Running the Single Positive Control Samples.

Calculating Compensation Values

- 1 Check all acquired sample tubes and confirm that the gating is appropriate.
- 2 Select A or select **Compensation Calculation** in the Settings menu to calculate the compensation values.

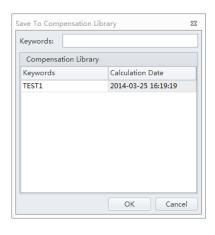

The Compensation Matrix window appears, displaying the calculated compensation values.

3 Select **Save As** to export the compensation matrix as a .comp file and specify where to save it.

NOTE The compensation matrix can also be imported for use in other experiments.

- **4** Select **Save To Compensation Library** to save the single color compensation values in the compensation library.
- 5 Specify the key words and select **OK**.

NOTE The settings stored in the compensation library are specific to the detector configuration. The compensation library can only be applied when the detector configurations are the same.

At any time, saved compensation experiments can be reopened and the compensation values recalculated.

6 Select Close.

Creating the Compensation Matrix from Previously Acquired Data

The software supports importing single color data acquired from other experiments into a compensation experiment to perform compensation calculations. The data to be imported must match the active detector configuration at the time that the compensation experiment was created. Otherwise, the data cannot be imported. It is important to ensure that imported data comes from the same instrument and uses the same configuration and channels. Data originating from a different instrument will cause erroneous calculations.

- **1** Select **New Compensation** from the File menu or the start page.
- **2** To create a compensation experiment, select the required channels. Refer to CHAPTER 6, Setting the Channel and Label.

3 Right-click on the appropriate test tube and select **Import FCS File**. Locate the corresponding data file and import the file. Only files compatible with the detector configuration are supported by the software for importing.

(in front of a test tube indicates that the corresponding data have been imported.

Tuł	Tube										
U	։ Աս ՄՀ սԾ 🗘	🖻 俎									
	Name	Sample ID Time									
	O Unstained_Cell										
	FITC										
	O PE										
	O PC5.5										
	O PC7										
	🔿 ко525										

4 After importing the data, adjust the gates to properly identify the positive population and the negative population for each single-color samples.

5 Calculate the compensation values and export them. Refer to Calculating Compensation Values.

NOTE The CytoFLEX platform uses the positive-negative method to calculate compensation.

$$B(k+1) = \frac{s(k) - B(k)}{1024} + B(k)$$

Where S(k) denotes the real-time background noise being measured.

Where B(k) denotes the background noise being filtered.

Where B(k+1) denotes the noise background base being filtered at the next point.

Adjusting Compensation

Manually Adjusting Compensation

The compensation can be manually adjusted in an experiment in two ways:

- Select the populations where needs to be adjusted in the bivariate plot. Select ⁽¹⁾/₍₂₎ from the graphic control area, then click and drag the mouse pointer up and down or left and right inside the plot to adjust compensation.
- Select **Compensation Matrix** in the Setting menu to open the compensation matrix. Adjust the compensation value between the primary channel and the secondary channel.

Importing and Exporting Compensation

Importing Compensation Settings from Compensation Matrix Files

- **1** Select the desired sample tube for importing compensation values.
- **2** Select **Compensation Matrix** in the Setting menu.
- **3** Select **Import** and locate the path where compensation matrix files are saved. Select the corresponding compensation matrix file (.comp) to import the compensation values.

You can also select **Import from Library** to import compensation values from the compensation library. The Import from Compensation Library window appears. Refer to Importing Compensation Settings from the Compensation Library.

Both methods allow you to apply the gain independent compensation capability, i.e. importing the compensation values with or without recalculating the compensation matrix based on the gain settings.

- **4** After opening the desired compensation file, the Import Compensation window appears. Select one of the following:
 - Import compensation matrix and convert based on the current gain.
 - Import compensation matrix only.
 - Import compensation matrix and gain.

Import Compensation	×
O Import compensation matrix and conver	t based on the current gain.
O Import compensation matrix only.	
 Import compensation matrix and gain. 	
	OK Cancel

NOTE

- If the tube does not have any data when importing compensation values calculated from other instrument settings, the software prompts you to select whether the gain settings must be imported as well. Select **Yes** to import fluorescence channel gains settings along with the rest of the data. Select **No** to allow the CytExpert software to adjust the compensation matrix values based on the current gain settings.
- If the tube does have data when importing compensation values from other instrument settings, the software prompts you to select whether the compensation values are adjusted based on the current gain settings.
- It is important to note that automatic adjustments to compensation values calculated from other instrument gain settings could result in incorrect compensation. Always review the data after importing compensation values to ensure the sample is compensated properly.

5 Select OK.

- **6** If necessary, select **Apply to** to apply the compensation values to the selected test tubes.
- 7 Select Close.

Importing Compensation Settings from the Compensation Library

You can choose which single color data to include from the compensation library. Only single color data in the compensation library from the same detector configuration can be imported into the compensation matrix.

1 Select **Import From Compensation Library** to select which compensation values to import from the compensation library.

4 Select Save.

NOTE The generated file ends in .comp.

Managing the Compensation Library

Compensation values can be managed in the Compensation Library.

1 Select **Compensation Library** from the Settings menu. The Compensation Library window appears.

NOTE The Compensation Library is arranged by fluorescence detection channels.

2 Select the desired single color sample. The compensation information appears on the right side of the window.

NOTE Existing compensation values (height and area) can be modified by double-clicking the appropriate column in the Compensation Library window.

- **3** Enter the Label and Lot No. for the specified single color sample.
- 4 Select OK.

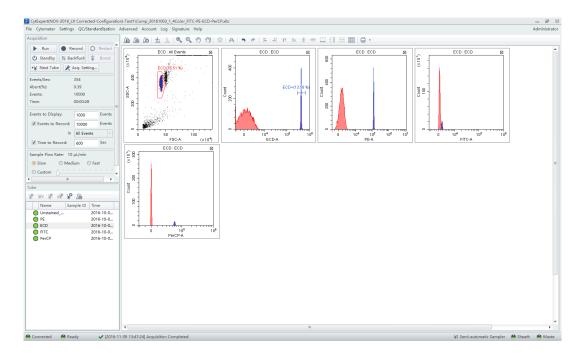

Adding Channels for Compensation

Channels requiring compensation calculations that have not been previously acquired can be added to the compensation experiment by acquiring the necessary positive tubes.

- 1 In the compensation experiment, select in the compensation controls, or select **Compensation Setup** in the Compensation menu. The Compensation Setup window appears.
- 2 Select the channel that needs to be added and select **OK**.

The software automatically adds a new single positive tube to the compensation experiment. It also adds a plot with appropriate parameters in the negative control tube.

NOTE It is important to ensure that the data for the previously acquired negative control now includes the data of the newly added channel and that the settings are correct. Otherwise, you must reacquire the negative control tube and adjust the gain.

- **3** Repeat Steps 1-2 to detect and acquire newly added single positive sample data.
- **4** Repeat Calculating Compensation Values to recalculate and export the compensation results.

CHAPTER 8 Data Review

Overview

This chapter discusses how to use the Analysis screen to analyze data. Data can be analyzed using any computer equipped with the CytExpert software. No online connection is required.

Workflow:

Import experiment or data \rightarrow Plot and configure statistics \rightarrow Export results

This chapter contains information on:

- Copying Experiments and Importing Data
- Setting the Plots and Statistics
- Calculating Sample Volume and Concentration
- Adjusting Compensation Settings
- Exporting Results

Copying Experiments and Importing Data

Copying a Previously Acquired Experiment

Experiments acquired by other CytoFLEX instruments using CytExpert software can be imported to your computer for analysis, provided your computer also uses CytExpert software.

Select **Open Experiment** from the Start page or select **Open Experiment** in the File menu to open the copied experiment. Then, select **Save As**.

NOTE The .xit and data folder must be stored in the same path.

Importing Previously Acquired Data

The CytExpert software can import and analyze compatible FCS data files acquired by other CytoFLEX flow cytometers.

1 Create a new experiment or open a saved experiment. Refer to CHAPTER 6, Creating an Experiment.

2 In the new or opened experiment, select **Import FCS File** in the File menu to import the data files.

KytExpert(Default-Configuration)-C:\Users				
<u>F</u> ile	<u>Cytometer</u> <u>S</u> ettings	<u>Q</u> C/Standardiza		
	<u>N</u> ew Experiment	Ctrl+N		
	New Experiment from	Template		
	New Compensation			
	Open Experiment	Ctrl+O		
	Open Compensation			
	<u>S</u> ave	Ctrl+S		
	Save <u>A</u> s			
	Save As <u>T</u> emplate			
Import FCS File				
	Export FCS File			
	<u>R</u> ecent	•		
	Recent Temp <u>l</u> ate	•		
	Recent Compensation	•		
	<u>C</u> lose Experiment			
	E <u>x</u> it	-		

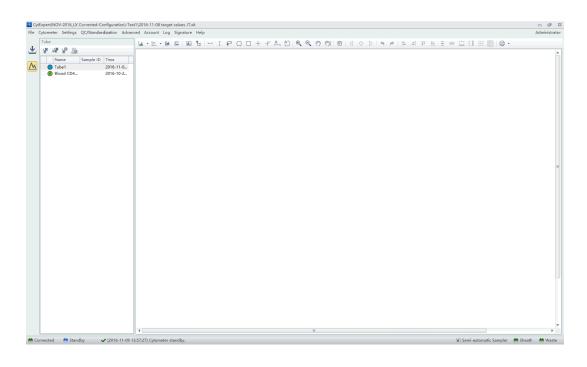

Imported data files appear in the Tube screen.

The **F** symbol in front of each data tube indicates that the data tube is an imported data file. Imported data files are copied and saved in the folder where the current experiment data files are saved.

Setting the Plots and Statistics

Opening the Analysis Screen

1 Select \boxed{M} on the left to enter the Analysis screen.

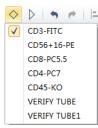

- **2** Copy plots obtained during data acquisition.
 - **a.** If you need original plots used during data acquisition, select 👱 to access the Acquisition screen.
 - **b.** Select the appropriate plots.
 - **c.** Right-click the selected plots and select **Copy** from the drop-down menu or press Ctrl+C to copy.
 - d. Select 🔼 to return to the Analysis screen.
 - e. Select the required test tube from the tube list on the left side of the screen.
 - **f.** Right-click the plot area and select **Paste** from the drop-down menu or press Ctrl+V to paste the plot.
 - **NOTE** Pasted plots include all gates, but the gate names are reassigned.

3 New plots can be created according to need. After selecting the test tubes requiring analysis, use the plotting control buttons at the top of the screen to create a new plot.

NOTE Each graph in the **Analysis** screen may correspond to different data. Pay special attention to each plot's heading to avoid mistakes during analysis.

4 Use the sample selection controls in the graphics controls toolbar at the top of the page (see Figure 2.1) to change the data displayed in a plot.

- **a.** Select the plot requiring a change to the data displayed. By pressing and holding the Ctrl key while selecting plots, you can select several plots at one time.
- **b.** Select one of the two triangular sample selection buttons (or) to choose between the previous sample and the next sample, or select to specify which data to display.

Creating Histogram and Dot Plot Overlays

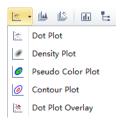

The CytExpert software supports histogram and dot plot data overlay functionality, allowing you to combine data from differing sources onto the same histogram or dot plot.

1 Select **Histogram Overlay** under the histogram icon drop-down list to create a new multi-data histogram.

 Image: Image

Or

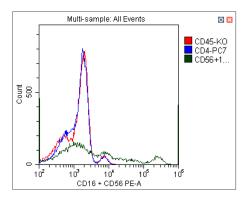

Select **Dot Plot Overlay** under the dot plot icon drop-down list to create a new dot plot overlay.

IMPORTANT A maximum of 10 samples can be overlaid.

2 Select 📀 to select samples for overlay display. Or, drag and drop samples from the tube list on the left into the histogram or dot plot overlay. The software automatically assigns different colors to different data.

\Diamond	> 5 e =
	CD3-FITC
	CD56+16-PE
\checkmark	CD8-PC5.5
\checkmark	CD4-PC7
\checkmark	CD45-KO
	VERIFY TUBE
	VERIFY TUBE1

To remove a sample, select on and uncheck the sample. Or, right-click the color legend and select **Remove [sample name]** or **Remove All Sample**. The corresponding data will no longer appear on the graph.

3 To change the color selections, right-click on the sample name in the legend located on the right side of the plot and select **Color** from the drop-down menu. A color pallet appears.

For configuring gates and generating statistics, refer to CHAPTER 6, Data Acquisition and Sample Analysis.

Calculating Sample Volume and Concentration

The CytoFLEX flow cytometer supports the calculation of the sample concentration based on the volume consumed and/or based on the known concentration of reference beads.

- **NOTE** If necessary, calibrate the sample uptake rate (see CHAPTER 12, Calibrating the Sample Flow Rate) prior to collecting data for volumetric analysis:
 - Select the *cells/µL(V*) checkbox to calculate concentration directly.
 - **NOTE** The direct calculation of concentration can be affected by several conditions such as, the sample's viscosity and sample mixing. Uncalibrated sample volume uptake rates may lead to erroneous results.
 - If using reference beads to calculate the concentration, select the *cells/µL(B)* checkbox and select the gated **Beads Population**. Enter the total number of reference beads as the **Beads Count**, as well as the sample volume in total. The software automatically calculates the original sample concentration based on the input values. (You can also enter the reference bead concentration directly in the beads count field and set the sample volume as 1.)

To obtain accurate calculations, throughout the data acquisition process, ensure that:

- The sample concentration is 2×10^4 - 10^7 units/mL.
- Samples are thoroughly mixed before loading and that they exhibit no apparent subsidence throughout the testing process.
- The detection rate is maintained at less than 10,000 events/second throughout the sampling process. When the detection rate does not exceed the stated event rate, running at medium to high acquisition speeds are considered more accurate.
- A constant sampling rate is maintained when recording data.
- You acquire at least 10 µL of sampling volume.

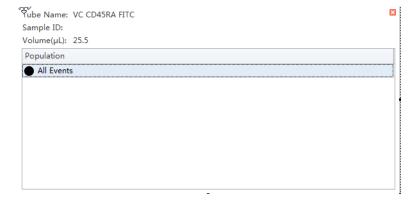

In the Statistics Setting screen, select **Volume** and the concentration item to see the corresponding information in the statistics table.

NOTE While collecting samples, instantaneous data calculation can appear inaccurate. Regard the calculation as accurate only after data acquisition has been completed.

[CytoFLEX LX Shown]

Adjusting Compensation Settings

Data compensation can be carried out at any time. You can select the desired tube in the tube list

on the left side of the screen and select in the compensation controls, or select **Compensation Setup** in the Compensation menu. Refer to CHAPTER 7, Adjusting Compensation, for detailed instructions on adjusting compensation settings.

Exporting Results

Refer to CHAPTER 6, Data Acquisition and Sample Analysis.

Data Review Exporting Results

CHAPTER 9 Daily Shutdown

Overview

This chapter provides procedures for shutting down the CytoFLEX instrument.

Workflow:

Prepare the cleaning solution \rightarrow Clean the instrument \rightarrow Turn the instrument off

This chapter contains information on:

- Preparing the Cleaning Solution
- Running Daily Clean
- Shutting Down the Instrument
- Auto Shutdown [CytoFLEX LX Only]

Preparing the Cleaning Solution

Required materials

Materials to prepare:

- 12 x 75 mm sample loading tubes
- FlowClean
- Deionized water
- Bleach

Set aside 2 mL of FlowClean in one sample tube and 3 mL of the deionized water in a separate sample tube.

IMPORTANT It is recommended to perform Daily Clean before shutting down the instrument to clean the sample line. Otherwise, the CytExpert software will prompt you to run Daily Clean repeatedly when you shut down the instrument

1 Verify that the instrument is in the initialized state.

- 2 Run Daily Clean to clean the sample line. Refer to CHAPTER 11, Daily Clean or CHAPTER 11, Daily Clean [With Plate Loader].
- **3** If necessary, empty all waste liquid from the waste container. Refer to CHAPTER 12, Emptying the 4 L Waste Container.
- **4** Remove the sample tube from the instrument and store according to your laboratory procedures.
- **5** If there are any spills, clean the sample station. Refer to CHAPTER 11, Cleaning the Sample Station.

Shutting Down the Instrument

- 1 Confirm that the instrument is in the standby state.
- **2** Proceed to Step 3 to exit the software without running Daily Clean. If Daily Clean was already run, exit the software and skip to Step 6.
- **3** If you attempt to exit the software without performing Daily Clean, a confirmation message appears.
- **4** Select No. Not Now or No. Continue to exit the software. A warning message appears.

[Cytometer's power is on]

Confirm		23
?	It is recommended to run Daily Clean to keep sample line clear. Do you want to run Daily Clean now?	
	Yes. Run Daily Clean Now	

[Cytometer's power is off]

Confirm	1	23
?	The cytometer turned off after sample acquisition but without the recommended cleaning of the sample line. It is recommended to cancel exiting the software, turn on the cytometer and perform Daily Clean. Do you want to cancel exiting the software?	
	Yes. Cancel exiting the software	

- **NOTE** If you want to perform the Daily Clean before exiting the software, select **Yes. Run Daily Clean Now** or **Yes. Cancel exiting the software** and run the Daily Clean procedure. Refer to Running Daily Clean.
- **5** Select **Yes** to skip the Daily Clean.

٧	Varning		
		Prolonged delay of the cleaning may result in clogging of the sample line, requiring sample line replacement and rendering the instrument inoperable. Are you sure you want to skip Daily Clean?	
		Yes No	

NOTE If you want to perform the Daily Clean before exiting the software, select **No**. Skip to Step 4 and select **Yes. Run Daily Clean Now** or **Yes. Cancel exiting the software** and run the Daily Clean procedure. Refer to Running Daily Clean.

6 Optional: Turn the computer off.

7 Optional: Turn the Cytometer's main power switch off.

Auto Shutdown [CytoFLEX LX Only]

You can set up the system to automatically shutdown the Cytometer.

To schedule an auto shutdown after acquisition, refer to Step 6 of CHAPTER 6, Creating an Experiment.

To schedule an auto shutdown during Daily Clean, refer to Step 3 of CHAPTER 11, Daily Clean [With Plate Loader].

Daily Shutdown Auto Shutdown [CytoFLEX LX Only]

CHAPTER 10 Troubleshooting

Overview

IMPORTANT In addition to the information stated, never disassemble the instrument or have it repaired by unauthorized personnel. Beckman Coulter bears no responsibility for any problems arising from the unauthorized repair of the instrument.

This chapter introduces solutions to common problems. If there is a problem, follow the information in this chapter to carry out self-inspection. If the problem cannot be resolved, contact us.

This chapter contains information on:

- Precautions/Hazards
- Hazard Labels and Locations
- Disposal Precaution
- Troubleshooting Table
- Backup and Restore

Precautions/Hazards

Laser Related Hazards

Beckman Coulter design and manufacture of the instrument complies with the requirements governing the use and application of a laser specified in regulatory documents issued by the:

- U.S. Department of Health and Human Services
- Center for Devices and Radiological Health (CDRH)
- International Electrotechnical Commission (IEC)

In compliance with these regulatory documents, every measure has been taken to ensure the health and safety of users and laboratory personnel from the possible dangers of laser use.

Use the instrument according to the information in the manuals.

Use controls or adjustments or performance of procedures other than those specified herein might result in hazardous radiation exposure.

To ensure your safety, the Cytometer lasers are covered with protective shields. Do not remove these shields.

No user-serviceable assemblies are accessible. Do not attempt to remove the laser or open it. The instrument has components that are dangerous to the operator. If any attempt has been made to defeat a safety feature, or if the instrument fails to perform as described in its manuals, disconnect the power and contact us.

Laser Beam Hazards

The CytoFLEX Platform flow cytometer can be configured with up to 6 solid-state diode lasers that are capable of producing laser light at the following levels:

- 355 nm, 20 mW solid-state diode laser
- 375 nm, 60 mW solid-state diode laser
- 405 nm, 80 mW solid-state diode laser
- 488 nm, 50 mW solid-state diode laser
- 561 nm, 30 mW solid-state diode laser
- 638 nm, 50 mW solid-state diode laser
- 808 nm, 60 mW solid-state diode laser

A laser beam is a unique light source that shows characteristics different from conventional light sources. The safe use of the laser depends upon familiarity with the instrument and the properties of coherent, intense beams of light.

🕂 WARNING

Risk of personal injury. The laser beam can cause eye damage if viewed either directly or indirectly from reflective surfaces (such as a mirror or shiny metallic surfaces). To prevent eye damage, avoid direct exposure to the laser beam. Do not view it directly or with optical instruments.

Indirect contact with the laser beam from reflective surfaces (such as jewelry or a screwdriver) is called specular reflection and might also cause damage.

For these reasons, it is important to:

- Limit access to the Cytometer to trained and experienced personnel.
- Never attempt to remove a shield housing a laser.
- Never remove a warning label.
- Contact us if a label is missing or unclear.

Laser Warning Labels

🔨 WARNING

Risk of personal injury from radiation exposure. Never remove the shield surrounding a laser. Never remove covers.

CDRH-approved and IEC compliant labels are also placed near or on those covers that when removed might expose laser radiation. If necessary, a cover with a CDRH-approved or IEC compliant label must be removed by a qualified Beckman Coulter Representative only.

Refer to the following figures for the locations of the CDRH-approved and IEC compliant labels:

- See Figure 10.1 and Figure 10.2 for the Laser Warning Label on the Cytometer optical bench.
- See Figure 10.3 and Figure 10.4 for the Laser Warning Label on the optical bench (located Inside the Cytometer).

See Figure 10.6 and Figure 10.7 for the Laser Warning Labels on the Cytometer Back Cover.

The laser product is classified as CLASS 1 when all protective measures are in place. This product complies with 21 CFR Parts 1040.10 and 1040.11 as well as EN60825-1. See Figure 10.1.

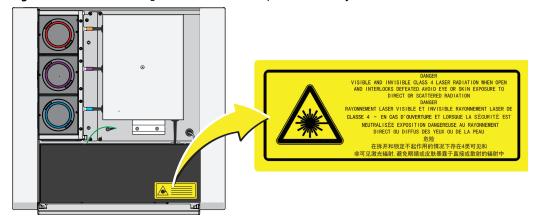

Figure 10.1 Laser Warning Label on the Laser Optical Bench [CytoFLEX]

Figure 10.6 Laser Warning Labels on the Cytometer Back Cover [CytoFLEX and CytoFLEX S]

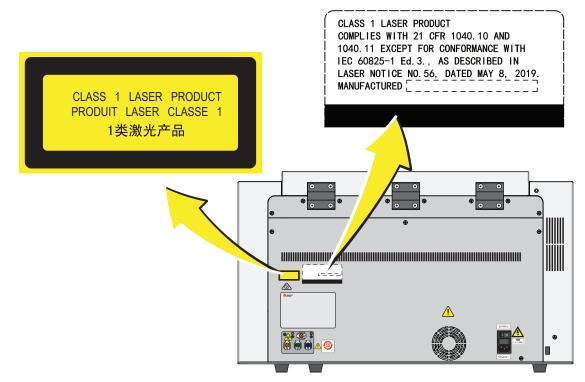

Figure 10.7 Laser Warning Labels on the Cytometer Back Cover [CytoFLEX LX]

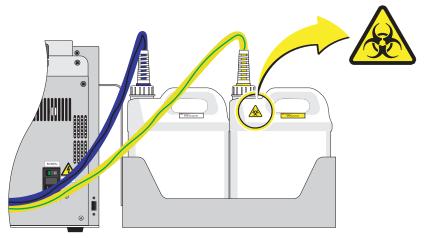

Hazard Labels and Locations

Carefully read the hazard warning labels on the instrument. The hazard labels are located on the instrument as indicated.

NOTE If a label is missing or unclear, contact us.

Biohazard Label and Location

Caution Labels and Location

Figure 10.12 Caution Labels [CytoFLEX or CytoFLEX S]

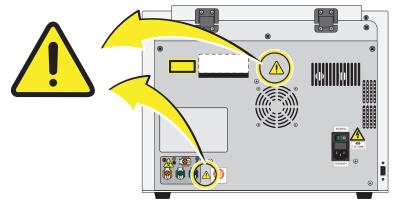

Plate Loader Hazard Labels and Location

Figure 10.13 Plate Loader Hazard Labels

Disposal Precaution

🕂 WARNING

Risk of biohazardous contamination if you have skin contact with the waste container, its contents, and its associated tubing. The waste container and its associated tubing could contain residual biological material and must be handled with care. Clean up spills immediately. Dispose of the contents of the waste container in accordance with your local regulations and acceptable laboratory procedures.

Use universal precautions when working with pathogenic materials. Means must be available to decontaminate the instrument and to dispose of biohazardous waste.

Troubleshooting Table

Table 10.1 lists problems that you could encounter while running the CytoFLEX flow cytometer, the probable causes of each problem, and the corrective actions. These problems are listed alphabetically in the Index, under the primary entry "troubleshooting".

Table 10.1	Troubleshooting
------------	-----------------

Problem	Probable Cause	Corrective Action
The Cytometer cannot be turned on.	 The instrument is turned off in the Cytometer menu. [CytoFLEX LX] The power switch is in the off position and the Turn On selection will not function in the Cytometer menu. [CytoFLEX LX] The power cable is not securely connected. The fuse is blown. 	 Ensure the power switch is in the on position on the back of the Cytometer. [CytoFLEX LX] Select Turn On in the Cytometer menu. [CytoFLEX LX] Ensure that the power cable is securely connected to the back of the Cytometer. Replace the fuse. Refer to CHAPTER 12, Replacing the Fuse. If the problem persists, contact us.
The Workstation cannot be turned on.	The power cable is not securely connected.The Workstation was restarted too fast.	 Ensure that the power cable is securely connected to the back of the Cytometer. Unplug the power cable. Wait 10 seconds, then plug the power cable back in. Then, restart the computer. If the problem persists, contact us.

Problem	Probable Cause	Corrective Action
The connection indicator light in the lower left corner of the software screen is red and displays <i>Disconnected</i> and <i>Error</i> .	 Data connection error The Cytometer is not turned on. The Cytometer's power cable is disconnected. 	 Ensure that the USB data cable is securely connected to the back of the Cytometer and the back of the Workstation. Refer to Figure 1.22. Restart the software. Restart the Workstation. Refer to CHAPTER 4, Initializing the Instrument. Turn on the Cytometer using the power switch on the back of the instrument. Verify that the power cable is securely connected to the back of the Cytometer. If the problem persists, contact us.
The alarm does not sound when the waste container is full or the sheath fluid container is low and the software status display is red.	 The alarm is not working. Instrument data connection error. The sheath fluid/waste harness float is restricted. The sheath fluid/waste harnesses have been secured on the wrong container. 	 Ensure the sheath fluid/waste harnesses are secured to the correct container. Ensure that the USB data cable is securely connected to the back of the Cytometer and the back of the Workstation. Refer to Figure 1.22. Restart the Workstation. Refer to CHAPTER 4, Initializing the Instrument. Restart the software. WARNING Risk of biohazardous contamination if you have skin contact with the waste container, its contents, and its associated tubing. The waste container and its associated tubing could contain residual biological material and must be handled with care. Clean up spills immediately. Dispose of the contents of the waste container in accordance with your local regulations and acceptable laboratory procedures. Verify that the float of the sensor in the sheath fluid/waste container moves freely. Replace the sheath fluid/waste harness. Refer to CHAPTER 12, Replacing the Sheath Fluid Harness and/or Waste Harness. If the problem persists, contact us.

Table 10.1 Troubleshooting (Continued)

Problem	Probable Cause	Corrective Action
The fluid status information displays red for <i>Sheath</i> and/or <i>Waste</i> even though the sheath fluid container is full and the waste container is empty.	 Instrument data connection error. The sensor connection is not working properly. The sensor does not work properly. The sheath fluid/waste harnesses have been secured on the wrong container. 	 Ensure the sheath fluid/waste harnesses are secured to the correct container. Ensure that the USB data cable is securely connected to the back of the Cytometer and the back of the Workstation. Refer to Figure 1.22. Restart the software. Ensure the sheath fluid harness and/or the waste harness are properly connected. Verify that the float of the sensor in the sheath fluid container and/or waste container moves freely. Replace the sheath fluid harness and/or the waste harness. Refer to CHAPTER 12, Replacing the Sheath Fluid Harness and/ or Waste Harness. If the problem persists, contact us.
The sample tube holder cannot move up and down automatically.	The setting is incorrect.	 Ensure that the sample injection mode in the software is in Semi-Automatic Injection mode. Refer to CHAPTER 4, Selecting the Proper Sample Injection Mode. If the problem persists, contact us.
The sample flow rate is unstable.	 The sample probe is clogged. The sample contains aggregates or clumps. There are air bubbles in the flow cell. The sample peristaltic pump tubing is aged. The sample peristaltic pump tubing is not properly connected. 	 Run Prime. Refer to CHAPTER 12, Priming the Flow Cell. Run Daily Clean. Refer to CHAPTER 11, Daily Clean. Clean the sample probe. Refer to CHAPTER 11, Cleaning the Sample Probe. Filter the sample using an appropriately sized mesh aperture filter. Ensure that the sample tubing is properly connected. Refer to CHAPTER 12, Replacing the Sample Probe and/or the Sample Peristaltic Pump Tubing. Replace the sample probe and sample peristaltic pump tubing. Refer to CHAPTER 12, Replacing the Sample Probe and/or the Sample Peristaltic Pump Tubing. If the problem persists, contact us.

Problem	Probable Cause	Corrective Action
The sampling flow rate is too fast.	 The threshold setting is too low. The sample concentration is too high. There are too many sample fragments. The sheath fluid filter is clogged. The sample flow rate requires calibration. 	 Use the manual threshold setting to increase the threshold. Refer to CHAPTER 6, Adjusting the Threshold. Calibrate the sample flow rate. Refer to CHAPTER 12, Calibrating the Sample Flow Rate or CHAPTER 12, Calibrating the Sample Flow Rate [With Plate Loader]. Dilute the sample and adjust the concentration to approximately 10⁶/mL. Filter the sample using an appropriately sized mesh aperture filter. Restain the sample. Replace the Sheath Fluid Filter. Refer to CHAPTER 12, Replacing the Sheath Fluid Filter. If the problem persists, contact us.
Laser power is low.	Communication error	 Reinitialize. Refer to CHAPTER 4, Initializing the Instrument. Restart the Cytometer. If the problem persists, contact us.
Populations are drifting.	 Air bubbles are in the flow cell. Air bubbles are in the system. The sheath fluid harness float is restricted. 	 Run Prime. Refer to CHAPTER 12, Priming the Flow Cell. Ensure that the sheath fluid harness and/ or waste harness is not kinked. Ensure that the sheath fluid harness and/ or waste harness is securely connected. Run Prime. Refer to CHAPTER 12, Priming the Flow Cell. Verify that the float of the sensor in the sheath fluid container moves freely. Replace the sheath fluid harness. Refer to CHAPTER 12, Replacing the Sheath Fluid Harness and/or Waste Harness. If the problem persists, contact us.
Population amplitude is decreasing and CV values are increasing.	 Air bubbles are in the flow cell. The flow cell is dirty. The sheath fluid harness float is restricted. 	 Run Prime. Refer to CHAPTER 12, Priming the Flow Cell. Run the Deep Clean procedure. Refer to CHAPTER 11, Deep Clean Procedure. Verify that the float of the sensor in the sheath fluid container moves freely. Replace the sheath fluid harness. Refer to CHAPTER 12, Replacing the Sheath Fluid Harness and/or Waste Harness. If the problem persists, contact us.

Table 10.1 Troubleshooting (Continued)

Problem	Probable Cause	Corrective Action
The laser delay values are out of range.	 Air bubbles are in the flow cell. Air bubbles are in the system. The sheath fluid harness float is restricted. 	 Run Prime. Refer to CHAPTER 12, Priming the Flow Cell. Ensure that the sheath fluid harness and/ or waste harness is not kinked. Ensure that the sheath fluid harness and/ or waste harness is securely connected. Verify that the float of the sensor in the sheath fluid container moves freely. Replace the sheath fluid harness. Refer to CHAPTER 12, Replacing the Sheath Fluid Harness and/or Waste Harness. If the problem persists, contact us.
No data acquisition.	 The threshold setting is too high. The gain setting is too low. Sheath fluid flow is insufficient. Laser power is insufficient. The sample probe is clogged. 	 In the problem persists, contact ds. Decrease the threshold setting. Refer to CHAPTER 6, Adjusting the Threshold. Increase the gain setting. Refer to CHAPTER 6, Adjusting the Gain. Ensure that the sheath fluid harness and/ or waste harness is not kinked. Ensure that the sheath fluid harness and/ or waste harness is securely connected. Run Prime. Refer to CHAPTER 12, Priming the Flow Cell. Reinitialize. Refer to CHAPTER 4, Initializing the Instrument. Restart the Cytometer. Verify that your sample does not have excessive debris. If it does: Filter the sample using an appropriately sized mesh aperture filter. Restain the sample. Clean the sample probe. Refer to CHAPTER 11, Cleaning the Sample Probe. Replace the sample probe and the sample peristaltic pump tubing. Refer to CHAPTER 12, Replacing the Sample Probe and/or the Sample Peristaltic Pump Tubing. If the problem persists, contact us.
Data populations are normal on one laser, but too low on another laser.	The laser delay setting is incorrect.	 Ensure that the laser delay is set correctly. Refer to CHAPTER 12, Setting Laser Delay. If the problem persists, contact us

Table 10.1	Troubleshooting	(Continued)
------------	-----------------	-------------

Problem	Probable Cause	Corrective Action
Data populations are not where they are expected.	 The detector configuration setting is incorrect. The optical filter is not placed correctly. QC was not completed. Gain and threshold is not set correctly. 	 Ensure that the detector configuration is set correctly. Refer to CHAPTER 6, Verifying, Selecting, Editing, and Creating Detector Configuration. Ensure that the position of the optical filter in the WDM matches the detector configuration setting. Refer to CHAPTER 6, Verifying, Selecting, Editing, and Creating Detector Configuration. Ensure that the optical filter is installed correctly. Refer to CHAPTER 12, Replacing the Optical Filter. Follow the QC procedure. Refer to CHAPTER 5, Instrument Quality Control and Standardization. Review the gain and threshold settings. Refer to CHAPTER 6, Adjusting the Gain and CHAPTER 6, Adjusting the Threshold. Review the display ranges. Refer to CHAPTER 6, Creating Plots and Gates. If the problem persists, contact us.
No changes occurred after manually adjusting compensation settings.	Compensation was applied to the wrong channel.	Ensure that the adjustment is applied to the correct primary and secondary channels in the compensation matrix. Or Select ⁽²⁾ to modify compensation in the desired plot.
The calculation of the automatic compensation experiment is incorrect.	 Erroneous data acquisition. The gate is not set on the appropriate population. The events of the acquired cells are too low. The mean fluorescence of the positive cells is too weak. 	 Ensure that the corresponding negative control tube and the individual positive tube acquired are from the same sample type. Ensure that the single colors collected correspond to the correct tube name. Ensure that the gate in the FSC/SSC plot encloses the correct sample population. Ensure that the positive gate in each tube is correctly placed. Modify the events to record to ensure that enough events are collected for the data population. Select samples with a stronger positive signal as the positive control. Or Use dedicated compensation beads such as VersaComp Antibody Capture Beads

Table 10.1 Troubleshooting (Continued)

Problem	Probable Cause	Corrective Action
The sample is flowing, but no signal appears in the plot.	 The signal is outside of the display range. The parent gate is not positioned properly and does not contain events. The population color setting is too light. The threshold is too high. 	 Use either or to modify the display range. Or Right-click the plot and select Property. The Plot Property window appears. Select Fit with sample. Ensure that the parent gate is gated correctly. Change the display color. Move the sample above the threshold using one of the following methods: Decrease the threshold setting. Refer to CHAPTER 6, Adjusting the Threshold. Increase the gain setting. Refer to CHAPTER 6, Adjusting the Gain.
The concentration calculation is incorrect.	 The sample concentration is not within the specified range. The sample settled. The sample flow rate is too fast. The sample volume analyzed is too low. The cell population is not detected. 	 Ensure that the pipette used in sample processing is calibrated. Verify that the concentration of the sample is between 2x10⁴-10⁷ events/mL. Vortex the sample before loading and verify that the sample is evenly mixed before loading the sample. NOTE An excessively long sample loading time leads to sample settlement. Ensure that the sample flow rate does not exceed 10,000 events/second. Adjust the threshold to remove sample debris. Ensure that the following are correct: Gain. Refer to CHAPTER 6, Adjusting the Gain. Threshold. Refer to CHAPTER 6, Adjusting the Threshold. Compensation settings. Refer to CHAPTER 7, Compensation)

Table 10.1	Troubleshooting	(Continued)
------------	-----------------	-------------

Problem	Probable Cause	Corrective Action
The sample probe is too low.	The sample probe is not securely connected.	 Ensure that the sample probe is securely connected to the sample peristaltic pump tubing. Refer to CHAPTER 12, Replacing the Sample Probe and/or the Sample Peristaltic Pump Tubing. Ensure the sample pump cover is securely fastened. If the problem persists, contact us.
The wash station drips during backflush.	 The sample probe is not securely connected. The wash station height adjustment is not correct. 	 Ensure that the sample probe is securely connected to the sample peristaltic pump tubing. Refer to CHAPTER 12, Replacing the Sample Probe and/or the Sample Peristaltic Pump Tubing. Ensure the sample pump cover is securely fastened. If the problem persists, contact us.
The mixer is not functioning.	Sample mixing is disabled in the software.The mixer motor is defective.	 Ensure sample mixing is enabled in the software. Refer to CHAPTER 12, Changing Sample Mixing and Backflush Settings. If the problem persists, contact us.
Instrument operations cannot be performed in the Acquisition screen.	 The instrument is in standby mode. The software is frozen. Data connection error. 	 Select Initialize. Ensure that the power switch to the Cytometer is turned on. Restart the software. Restart the Workstation. Ensure that the USB data cable is securely connected to the back of the Cytometer and the back of the Workstation. Refer to Figure 1.22. If the problem persists, contact us.
Software installation fails.	Multiple issues.	Contact us.

Table 10.1 Troubleshooting (Continued)

Problem	Probable Cause	Corrective Action
QC aborted due to low event rate.	 The diluted CytoFLEX Daily QC Fluorospheres or CytoFLEX Daily IR QC Fluorospheres concentration is too low. The sample contains aggregates or clumps. The sample probe is clogged. The sample line is clogged. 	 Add 1 drop of CytoFLEX Daily QC Fluorospheres or CytoFLEX Daily IR QC Fluorospheres to the QC solution. Then, rerun QC. Prepare a new sample of QC Fluorospheres. Then, rerun QC. NOTE Mix the fluorospheres dropper bottle thoroughly before dispensing it into a tube. Reload the target value file. Refer to CHAPTER 5, Importing Lot-Specific Target Values. Then, rerun QC. Clean the sample probe. Refer to CHAPTER 11, Cleaning the Sample Probe. Then, rerun QC. Run Prime. Refer to CHAPTER 12, Priming the Flow Cell. Then, rerun QC. Run Daily Clean. Refer to CHAPTER 11, Daily Clean. Then, rerun QC. Replace the sample probe and sample peristaltic pump tubing. Refer to CHAPTER 12, Replacing the Sample Probe and/or the Sample Peristaltic Pump Tubing. Then, rerun QC. If problem persists, contact us.

Problem	Probable Cause	Corrective Action
QC failed.	 The sheath fluid container and the waste container are not on the same level as the Cytometer. The median fluorescence fails to meet the target specification. The QC gain value does not meet the target gain specifications. The laser delay settings are too high. rCV fails specifications. 	 Ensure the sheath fluid container and the waste container are on the same level as the Cytometer. Rerun QC. Refer to CHAPTER 5, Instrument Quality Control and Standardization. Run Prime. Refer to CHAPTER 12, Priming the Flow Cell. Then, rerun QC. Prime the sheath fluid filter with sheath fluid as follows, then rerun QC. Remove the vent cap from the sheath fluid filter. Ensure that the instrument is in Standby. At the Workstation, select Cytometer > Prime. IMPORTANT If the vent cap is not reinstalled as soon as the sheath fluid approaches the vent port, the sheath fluid will overflow. Wait until the sheath fluid approaches the vent port in the sheath fluid filter, then immediately reinstall the vent cap to avoid overflow. Run Daily Clean. Refer to CHAPTER 11, Daily Clean. Then, rerun QC. Run Deep Clean. Refer to CHAPTER 11, Deep Clean Procedure. Then, rerun QC.

Table 10.1 Troubleshooting (Continued)

Problem	Probable Cause	Corrective Action
The sample probe comes in contact with the bottom of the well plate.	 Incorrect plate type selected. The plate or plate holder is installed incorrectly. The sample probe sampling position is not calibrated. 	 Verify that the correct plate type is selected in the Plate window. Ensure the plate and the plate holder are installed correctly. Refer to CHAPTER 12, Replacing the Plate Holder [With Plate Loader]. Calibrate the sample probe sampling position. Refer to CHAPTER 12, Calibrating the Plate Position [With Plate Loader].
The dead volume of the plate wells are high.	 Incorrect plate type selected. The sample probe sampling position is not calibrated. 	 Verify that the correct plate type is selected in the Plate window. Calibrate the sample probe sampling position. Refer to CHAPTER 12, Calibrating the Plate Position [With Plate Loader].
Mixing does not sufficiently suspend the sample particles.	 Incorrect plate type selected. Incorrect sample mixing setting. The sample probe sampling position is not calibrated. 	 Verify that the correct plate type is selected in the Plate window. Verify the sample mixing duration in the Plate window. Calibrate the sample probe sampling position. Refer to CHAPTER 12, Calibrating the Plate Position [With Plate Loader].
Gain is over 3,000 and default gain settings are needed.	Corrupt/incorrect configuration file.	Reload the configuration file. Refer to APPENDIX A, Installing the Instrument Configuration File.
The configuration file does not match the instrument.	Corrupt/incorrect configuration file.	 Verify the correct configuration file is installed. Reload the configuration file. Refer to APPENDIX A, Installing the Instrument Configuration File.
The Administrative account is locked.	The Admin password was forgotten and the attempts exceed the limit.	 Select Forgot password. Contact us.
Plots are cut off when printing a PDF.	Plots need to be rearranged.	Rearrange the plots until the print preview screen shows all plots correctly.

Backup and Restore

IMPORTANT If you have the Electronic Record Management software option installed, ensure the following prior to attempting to restore data:

- The target system includes all of the disk volumes that each experiment directory is saved to.
- The user performing the restore has Set Experiment Directory permission in CytExpert.
- **NOTE** These procedures are only available if you have either the User Management or Electronic Record Management software option installed.
 - Electronic Record Management: Both the database and experiment files can be backed up or restored.
 - User Management: Only the database can be backed up or restored.

Backup

- **1** Launch CytExpert.
- 2 Select **Backup/Restore > Backup**. The Backup window appears.

Backup		
Select backup direc	tory	
Backup Directory:	F:\Backup CytFLEX	Next > Close

Risk of data loss. Beckman Coulter recommends storing data on a drive other than the operating system.

3 Select _____ and browse to the desired backup directory to store the backup data.

Selecting the same drive as the operation system prompts the following system warning:

١	Narning	
		It is not recommended to store data on the same drive as the operating system due to the potential data loss risk. Are you sure you want to continue?
		Yes No

4 Select **Next**. The Prechecking window appears.

Backup	
Prechecking	
Prechecking the backup data, please wait a while.	

The backup starts automatically after the prechecking.

7 Select OK.

Log Cleanup

I

Use Log Cleanup to delete Experiment Operation Logs and System Operation Logs before a selected date.

NOTE These procedures are only available if you have the Electronic Record Management software option installed.

1 Ensure all experiment files are closed.

2 Select Backup/Restore > Log Cleanup. The Log Clean-up window appears.

Log Clean-up	
Set clean-up condition	
Clean up experiment operation log and system operation log be 2017-07-11 00:00:00 +	efore:

Close the experiment and try again if the operation system prompts the following message:

3 Select the desired date and time.

Log Clean-up	
Set clean-up condition	
	fore: Next. > Close

4 Select **Next**. The Confirm window appears.

Confirm	
?	Are you sure you want to clean up the logs older than 2017-07-11 00:00:00?
	Yes

5 Select **Yes.** The Clean-up succeeded window appears.

Log Clean-up	
Clean-up succeeded	
The clean-up of the logs older than 2017-07-11 00:00:00 co	ompleted successfully. Finish

6 Select Finish.

Cleaning Procedures

Overview

This chapter describes how to carry out certain routine and nonscheduled cleaning procedures. Proper cleaning can help extend the service life of the instrument and ensure experimental accuracy. When conducting any cleaning, take all necessary biosafety precautions and use proper personal protective equipment.

This chapter contains information on:

- Routine Cleaning
 - Daily Clean
 - Daily Clean [With Plate Loader]
 - Cleaning the Sample Station
 - Deep Clean Procedure
 - Cleaning the 4 L Sheath Fluid Container
 - Cleaning the 4 L Waste Container
- Nonscheduled Cleaning
 - Surface Cleaning and Disinfection
 - Preparing the Instrument for Transport or Storage

Routine Cleaning

Daily Clean

Daily Clean should be performed during instrument startup and instrument shutdown to clean the sample line.

After sampling an excessively large sample or a sample that can easily clog the sample probe, it is recommended to perform the Daily Clean procedure. Daily Clean can also be used to remove residual sample from previous tubes.

Perform a Daily Clean when the system reminder prompts you to do so. Otherwise, the reminder will prompt you repeatedly.

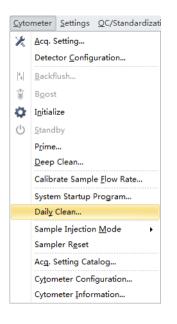

Confi	m	23
	To keep sample line clear, a Daily Clean is required within 24 hours from running sample. Do you want to run Daily Clean now?	
	Yes. Run Daily Clean Now	

NOTE If you select **No. Not Now**, a warning message appears. Select **Yes** to skip Daily Clean or select **No** and perform Daily Clean. Refer to CHAPTER 9, Running Daily Clean.

Warning	J	
	Prolonged delay of the cleaning may result in clogging of the sample line, requiring sample line replacement and rendering the instrument inoperable. Are you sure you want to skip Daily Clean?	
	Yes	

1 Open the CytExpert software and confirm that the instrument is connected and that it has already been initialized. Refer to CHAPTER 4, Logging into the Software.

2 Select Daily Clean in the Cytometer menu.

3 Add 2 mL of FlowClean solution to an unused sample tube.

- 4 Add 3 mL of DI water to an unused sample tube.
- 5 Insert the sample tube with 2 mL of FlowClean solution into the sample holder and select Run.

NOTE The default cleaning time is 3 minutes.

Daily Clean	Σ
Step1: Please load a tube with cleaning liquid.	
Duration: iminutes (1~100)	
	Run

Step1: Please load a tube with cleaning liquid. Duration: 3 ; minutes (1~100)	Stop

6 Remove the Flow Clean tube.

7 Insert the sample tube with 3 mL of DI water into the sample holder and select **Run** to perform the second step of the cleaning process.

NOTE The default cleaning time is 5 minutes.

Daily Clean	23
Step2: Please load a tube with deionized water.	
Duration: minutes (1~100)	
	Run
Daily Clean	
Step2: Please load a tube with deionized water.	
Duration: 5 t minutes (1~100)	
Remaining Time: 4 min 29 sec	

8 After the process has been completed, remove the sample tube and close the Daily Clean window.

Stop

Step3: Finished.	
	Close

Daily Clean [With Plate Loader]

Daily Clean should be performed during instrument startup and instrument shutdown to clean the sample line.

After sampling an excessively large sample or a sample that can easily clog the sample probe, it is recommended to perform the Daily Clean procedure. Daily Clean can also be used to remove residual sample from previous tubes.

Perform a Daily Clean when the system reminder prompts you to do so. Otherwise, the reminder will prompt you repeatedly.

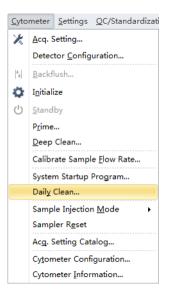

Confirm	23
To keep sample line clear, a Daily Clean is required within 24 hours from running sample. Do you w run Daily Clean now?	ant to
Yes. Run Daily Clean Now No. Not Now	

NOTE If you select **No. Not Now**, a warning message appears. Select **Yes** to skip Daily Clean or select **No** and perform Daily Clean. Refer to CHAPTER 9, Running Daily Clean.

Warni	ng
	Prolonged delay of the cleaning may result in clogging of the sample line, requiring sample line replacement and rendering the instrument inoperable. Are you sure you want to skip Daily Clean?
	Yes

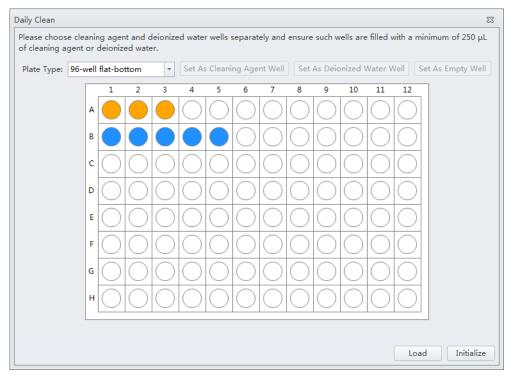

1 Open the CytExpert software and confirm that the instrument is connected and that it has already been initialized. Refer to CHAPTER 4, Logging into the Software.

2 Select **Daily Clean** in the Cytometer menu. The Daily Clean window appears. The plate loader automatically ejects the plate holder stage.

3 Follow the on screen software prompts and select the desired wells for cleaning agent and deionized water.

IMPORTANT You must select at least one cleaning solution well and one water well.

- a. Select the desired wells for the cleaning agent and select Set As Cleaning Agent Well.
- b. Select the desired wells for the deionized water and select Set As Deionized Water Well.

NOTE To deselect water wells, select the desired well and select Set As Empty Well.

- **c.** Select the *Turn off cytometer after daily clean* checkbox to automatically shutdown the cytometer after Daily Clean is finished. **[CytoFLEX LX Only]**
- **4** Select **Start** to start the cleaning procedure. The message *Please confirm that the correct plate is placed properly and press OK* appears. Select **OK**.
- 5 Select Close.

Cleaning the Sample Station

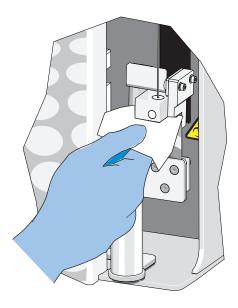

Carry out semi-automatic cleaning for the sample injection device once a week.

1 Ensure that the system has been shut down properly. Refer to CHAPTER 9, Shutting Down the Instrument.

Risk of chemical injury from bleach. To avoid contact with the bleach, use barrier protection, including protective eyewear, gloves, and suitable laboratory attire. Refer to the Safety Data Sheet for details about chemical exposure before using the chemical.

2 Use a piece of absorbent material with a 10% bleach solution (1 part high-quality, fragrance-free, gel-free bleach [5 to 6% solution of sodium hypochlorite - available chlorine] with 9 parts DI water) to wipe off all surfaces in the sample station, while taking all necessary biological safety precautions.

3 Wipe off the bottom of the semi-automatic sample injection device.

Cleaning the Sample Probe

When problems such as blockage of the sample probe occur, it is required to replace or clean the sample probe.

1 Confirm that the instrument is in the standby state or that the power supply is turned off.

Risk of biohazardous contamination if you have skin contact with the sample probe or the sample peristaltic pump tubing. The sample probe and the sample peristaltic pump tubing might contain residual biological material and must be handled with care. Clean up spills immediately. Dispose of the sample probe and the sample peristaltic pump tubing in accordance with your local regulations and acceptable laboratory procedures.

- **2** Remove the sample probe. Refer to CHAPTER 12, Replacing the Sample Probe and/or the Sample Peristaltic Pump Tubing.
- **3** Put the sample probe into a clean container and soak it in clean water. Use an ultrasonic cleaning device to clean for 2 minutes.
- **4** Reattach the sample probe to the sample peristaltic pump tubing and confirm that the bead on the sample probe touches the sleeve on the end of the sample peristaltic pump tubing.
- **IMPORTANT** To ensure that the proper placement of the sample probe, push the sample pump cover up while installing the thumbscrew.
- **5** Install the sample pump cover.
- **6** If ineffective, replace with a new sample probe. Refer to CHAPTER 12, Replacing the Sample Probe and/or the Sample Peristaltic Pump Tubing.

Deep Clean Procedure

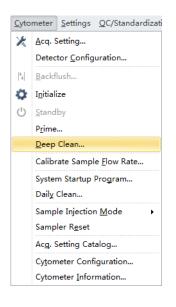

Carry out a deep clean once a month to clean the instrument flow cell. If the unit will be shutdown and not used for more than 10 days, it is recommended to complete one deep clean before resuming use.

- **1** Place the instrument in standby state.
- **2** Remove the right-side cover. Refer to CHAPTER 12, Right-Side Cover Removal and Reinstallation.

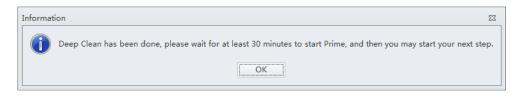

3 Confirm that the Deep Clean solution volume in the bottle located inside the Fluidics module is sufficient.

To prepare and add more Deep Clean solution, refer to CHAPTER 12, Adding the Deep Clean Solution.

4 Select **Deep Clean** in the Cytometer menu. The software message *Are you sure to start deep clean*? appears. Select **Yes** to start the Deep Clean process in the instrument flow cell.

5 The status bar prompts that a deep clean is under way. Wait for the Deep Clean process to finish. The following software message appears:

Select **OK**.

6 Allow the cleaning solution to remain in the flow cell for approximately 30 minutes. If you are required to postpone the cleaning time, do not exceed 24 hours. During the Deep Clean cycle, the power supply of the unit can be turned off, but the instrument cannot be initialized.

7 Select **Prime** in the Cytometer menu. The software message *Are you sure to start Prime*? appears. Select Yes.

	Cytometer Information	

- **8** Run Daily Clean. Refer to Daily Clean.
- **9** Perform initialization as required (see CHAPTER 4, Initializing the Instrument) to carry out the next experiment or to turn off the instrument.
- **10** Reinstall the right-side cover. Refer to CHAPTER 12, Right-Side Cover Removal and Reinstallation.

Cleaning the 4 L Sheath Fluid Container

Clean the sheath fluid container once a month.

- 1 Confirm that the instrument is turned off or is in the standby state.
- **2** Remove the sheath fluid container from the Fluid Container holder.
- **3** Remove the sheath fluid harness from the sheath fluid container.

- **4** Empty the residual sheath fluid from the sheath fluid container.
- **5** Add about 50 to 100 mL of CytoFLEX Sheath Fluid to the sheath fluid container.
- **6** Insert the sheath fluid harness back into the sheath fluid container and tightly close the sheath fluid container cap.
- 7 Swirl the sheath fluid in the sheath fluid container, rinsing all surfaces.
- **8** Empty the sheath fluid container.
- **9** Refill the sheath fluid container. Refer to CHAPTER 12, Filling the 4 L Sheath Fluid Container.

Cleaning the 4 L Waste Container

Clean the waste container once a month.

- 1 Confirm that the instrument is turned off or is in the standby state.
- **2** Remove the waste container from the Fluid Container holder.

Risk of biohazardous contamination if you have skin contact with the waste container, its contents, and its associated tubing. The waste container and its associated tubing could contain residual biological material and must be handled with care. Clean up spills immediately.

3 Remove the harness from the waste container.

Risk of biohazardous contamination if you have skin contact with the waste container, its contents, and its associated tubing. The waste container and its associated tubing could contain residual biological material and must be handled with care. Clean up spills immediately. Dispose of the contents of the waste container in accordance with your local regulations and acceptable laboratory procedures.

4 Empty the waste container.

🕂 WARNING

Risk of chemical injury from bleach. To avoid contact with the bleach, use barrier protection, including protective eyewear, gloves, and suitable laboratory attire. Refer to the Safety Data Sheet for details about chemical exposure before using the chemical.

- **5** Add 1 L of sodium hypochlorite solution with 0.5% active chlorine to the waste container.
- **6** Insert the waste harness back into the waste container and tightly close the waste container cap.

<u>/</u> CAUTION

Risk of damage to the sheath fluid harness and/or waste harness. Do not leave the sodium hypochlorite solution in the fluid containers longer than 10 minutes.

7 Let stand for 5 to 10 minutes.

🕂 WARNING

Risk of chemical injury from bleach. To avoid contact with the bleach, use barrier protection, including protective eyewear, gloves, and suitable laboratory attire. Refer to the Safety Data Sheet for details about chemical exposure before using the chemical.

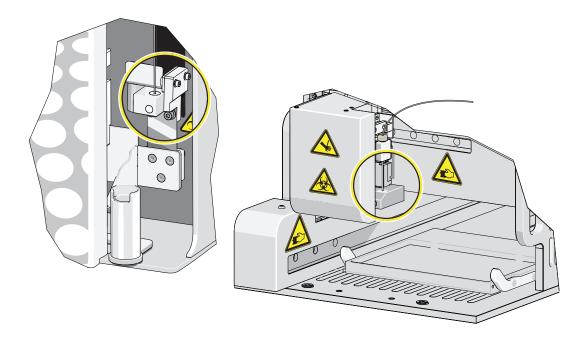

- **8** Dispose of the sodium hypochlorite solution in accordance with your local regulations and acceptable laboratory procedures.
- **9** Use deionized water to rinse the waste container and the waste harness. Ensure that there is no sodium hypochlorite residue.

10 Place the waste container back into the Fluid Container holder.

Nonscheduled Cleaning

Surface Cleaning and Disinfection

- **1** Wipe all external surfaces of the instrument clean with water and wipe dry immediately.
- **2** If you have a plate loader installed on your instrument, remove the front cover. Refer to CHAPTER 12, Front Cover Removal and Reinstallation.
- **3** Wipe the wash collar modules in the single tube station and the plate loader station with 100% isopropanol and wipe dry immediately.

4 If you have a plate loader installed on your instrument, reinstall the front cover. Refer to CHAPTER 12, Front Cover Removal and Reinstallation.

🕂 WARNING

Risk of chemical injury from bleach. To avoid contact with the bleach, use barrier protection, including protective eyewear, gloves, and suitable laboratory attire. Refer to the Safety Data sheet for details about chemical exposure before using the chemical.

5 Prepare a cleaning solution of 1 part high-quality, fragrance-free, gel-free bleach (5 to 6% solution of sodium hypochlorite - available chlorine) and 9 parts distilled water.

Risk of instrument damage. The instrument label can peel or fade, and the wash collar can become brittle and crack over time if these surfaces are wiped clean using the bleach solution followed by the 70% ethanol. Do not clean the label or the wash collar with the bleach solution followed by the 70% ethanol. Only use the specified cleaning methods in Steps 1 and 3 to clean these surfaces.

Risk of personal injury if electronic equipment is used near fumes or flammable gases. Ethanol is a flammability hazard. Avoid this risk by never using it in or near operating instruments.

6 Wipe down all exposed surfaces with the bleach solution and then 70% ethanol. Pay special attention to the Sampling area.

Be sure to avoid wiping the instrument label and wash collar module with the bleach solution and 70% ethanol.

Preparing the Instrument for Transport or Storage

When the instrument is to be transported or is not to be used for 30 days or more, complete the emptying processes to prevent instrument damage and to reduce the possibility of biological contamination. Contact us if you have any questions.

- 1 Run the Deep Clean procedure. Refer to Deep Clean Procedure.
- **2** Run the Daily Clean procedure. Refer to Daily Clean.

- **3** Clean the Sample Station. Refer to Cleaning the Sample Station.
- **4** Empty the sheath fluid container and the waste container (see CHAPTER 12, Emptying the 4 L Waste Container.
- **5** Clean and disinfect all surfaces. Refer to Surface Cleaning and Disinfection.

🕂 WARNING

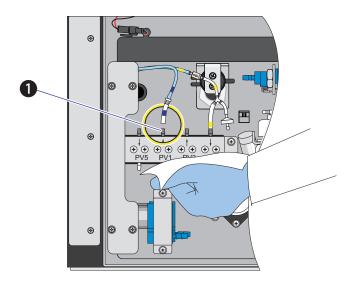

Risk of biohazardous contamination if you have skin contact with the waste container, its contents, and its associated tubing. The waste container and its associated tubing could contain residual biological material and must be handled with care. Clean up spills immediately. Dispose of the contents of the waste container in accordance with your local regulations and acceptable laboratory procedures.

- **6** Clean the sheath fluid container and the waste container. Refer to Cleaning the 4 L Sheath Fluid Container.
- 7 Remove the right-side cover (see CHAPTER 12, Right-Side Cover Removal and Reinstallation).
- **8** Remove the Deep Clean solution bottle from the bracket, empty the Deep Clean solution bottle, and rinse with DI water. Then, attach the Deep Clean solution bottle to the bracket.
- **9** Remove the Plate Loader module if applicable (see CHAPTER 12, Plate Loader Module Removal and Reinstallation [With Plate Loader]).
- **10** Power down and disconnect all the cables and sheath fluid and waste harnesses.

Risk of instrument damage. The Cytometer can suffer irreparable damage if it is exposed to subfreezing temperatures while it still contains liquid. Always drain the flow cell after cleaning the Cytometer if the Cytometer will be stored or transported in subfreezing temperatures.

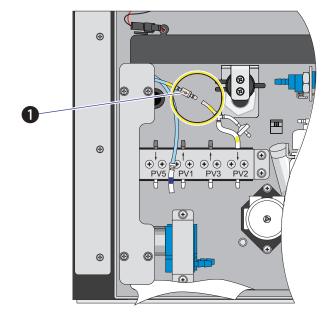

Risk of contamination from biohazardous material. Always wear PPE when performing this procedure as you can contact components with blood residue when handling the Fluidics module. Dispose of any absorbent materials used to collect or clean up leaks in accordance with the local regulations and acceptable laboratory procedures.

11 Disconnect the blue-labeled tubing from the pneumatic valve PV1 and hold the absorbent material under the disconnected tubing to collect any dripping liquid.

12 Disconnect the yellow-labeled tubing connected to the choke to vent the flow cell, allowing it to drain.

- 1. Choke
- **13** Verify that liquid has stopped dripping from the blue-labeled tubing.

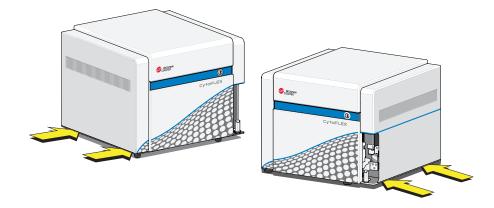

NOTE The flow cell is empty when liquid stops dripping from the blue-labeled tubing.

- **14** Dispose of the absorbent material used to collect the liquid in accordance with the local regulations and acceptable laboratory procedures and cleanup any spills.
- **15** Reconnect the blue-labeled tubing to PV1.
- **16** Reconnect the yellow-labeled tubing to the choke.
- **17** Reinstall the right-side cover (see CHAPTER 12, Right-Side Cover Removal and Reinstallation).
- **18** Ensure that the optical filters are seated properly.
- **19** Ensure that the top cover is tightly closed.

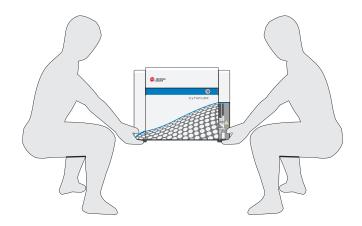

20 If the instrument is to be transported or stored, put the instrument and the Plate Loader module (if applicable) into the Beckman Coulter supplied packing and comply with the requirements in APPENDIX A, Instrument Transportation and Storage, regarding correct placement during transportation and storage.

Lifting and Carrying Instructions

- **1** Position a person on the left and right sides of the Cytometer.
- 2 Reach under the base of the Cytometer in the areas indicated by the arrows in the figure below.

3 Gently lift the Cytometer as shown in the figure below.

Risk of personal injury. Use caution when lowering the Cytometer to avoid pinching fingers.

4 Lower the Cytometer to its designated location.

CHAPTER 12 Replacement/Adjustment Procedures

Overview

This chapter describes how to carry out certain routine and nonscheduled maintenance procedures. Proper maintenance can help extend the service life of the instrument and ensure experimental accuracy. When conducting any maintenance work, take all necessary biosafety precautions.

IMPORTANT In addition to parts specifically discussed, for all replacement parts, use only parts provided by Beckman Coulter to ensure proper functioning of the instrument. Never disassemble any part of the instrument without prior authorization. Beckman Coulter assumes no responsibility for any instrument problems resulting from the use of any part not authorized by Beckman Coulter for use with the instrument.

This chapter contains information on:

- Routine Replacement/Adjustment
 - Front Cover Removal and Reinstallation
 - Right-Side Cover Removal and Reinstallation
 - Filling the 4 L Sheath Fluid Container
 - Replacing the 10 L Sheath Fluid Cubitainer
 - Emptying the 4 L Waste Container
 - Emptying the 10 L Waste Cubitainer
 - Managing the Maintenance Reminder
 - Adding the Deep Clean Solution
 - Replacing the Sheath Fluid Filter
 - Unclogging the Sample Probe [With Sample Injection Mode Control Kit]
 - Unclogging the Sample Probe [Without Sample Injection Mode Control Kit]
 - Replacing the Sample Probe and/or the Sample Peristaltic Pump Tubing
 - Replacing the Sample Probe Assembly [With Plate Loader]
 - Changing the Sample Probe from the Single Tube Sample Station to the Plate Loader [CytoFLEX With Plate Loader]
 - Changing the Sample Probe from the Plate Loader to the Single Tube Sample Station [CytoFLEX With Plate Loader]
 - Inspecting the Liquid Flow Path for Leaks
 - Priming the Flow Cell
 - Replacing the Plate Holder [With Plate Loader]
 - Plate Loader Module Removal and Reinstallation [With Plate Loader]
 - Changing the Event Rate Setting

- Nonscheduled Replacement/Adjustment
 - Calibrating the Sample Flow Rate
 - Calibrating the Sample Flow Rate [With Plate Loader]
 - Setting Laser Delay
 - Replacing the Optical Filter
 - Replacing the Fuse
 - Replacing the Sheath Fluid Harness and/or Waste Harness
 - Changing Sample Mixing and Backflush Settings
 - Calibrating the Plate Position [With Plate Loader]

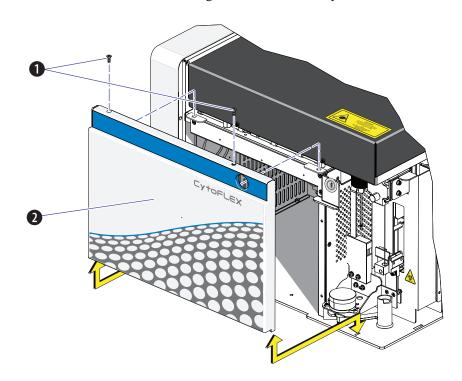

Routine Replacement/Adjustment

Front Cover Removal and Reinstallation

Removal

Risk of personal injury from electric shock caused by contacting exposed electronic components. Power down the instrument before removing the front cover of the Cytometer.

- **1** Exit the system software.
- **2** Turn off the main power switch on the back of the Cytometer.
- **3** Open the top cover.

4 Remove the two screws securing the front cover and pull the front cover forward.

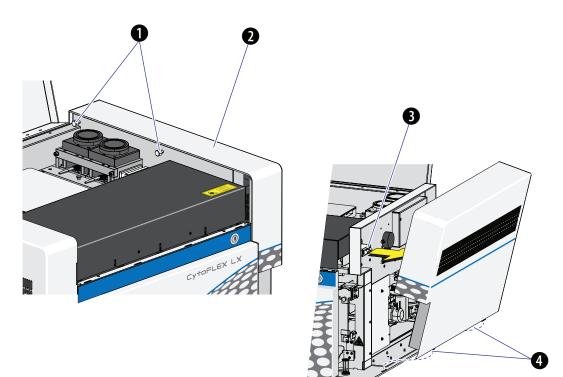

- 1. Securing screws
- 2. Front cover
- **5** Lift the front cover up and out of the slots in the frame.

Reinstallation

- 1 Slide the tabs on the bottom of the front cover into the slots in the bottom of the frame.
- **2** Push in the latches on the front cover to retract the pins, push the front cover into place, and release the latches to secure the cover.
- **3** Close the top cover.

Right-Side Cover Removal and Reinstallation

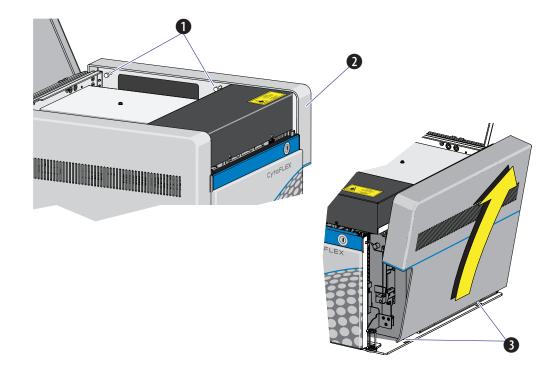

IMPORTANT The CytoFLEX LX flow cytometer only requires you to unfasten the thumbscrews the first time. There is a retaining clip that is used to secure the right-side cover without the need for the thumbscrews, if desired. Once the thumbscrews are unfastened, the right-side cover can simply be pulled off of the retaining clip for removal and pushed onto the retaining clip for reinstallation. Ensure the top cover is open before removing the right-side cover from the retaining clip.

- 1. Thumbscrews
- 2. Right-side cover
- 3. Retaining clip
- 4. Tabs

Removal

1 Open the top cover.

2 Unfasten the two captive thumbscrews for the right-side cover.

- 1. Captive thumbscrews
- 2. Right-side cover
- 3. Tabs

3 Lift the right-side cover up and out of the slots in the frame.

Reinstallation

- 1 Slide the tabs on the bottom of the right-side cover into the slots in the bottom of the frame and push the cover into place.
- **2** Fasten the two captive thumbscrews to secure the right-side cover.
- **3** Close the top cover.

Filling the 4 L Sheath Fluid Container

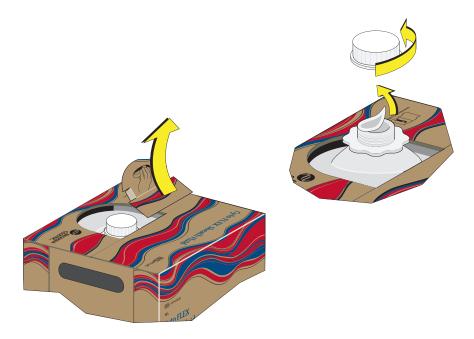

- 1 Confirm that the instrument is turned off or is in the standby state.
- **2** If necessary, remove any cardboard cutouts from the new CytoFLEX Sheath Fluid cubitainer. If you do not need a new cubitainer, skip to Step 7.
- **3** Locate the spigot inside the cardboard cutout.
- **4** Remove the cap and seal from the new sheath cubitainer. Be sure to completely remove the foil seal.
- **5** Screw on the spigot.
- **6** Unscrew the sheath fluid harness from the sheath fluid container and place in the fluid sensor holder cutout (refer to Figure 1.7.) to prevent contamination of the sheath fluid harness.

Risk of instrument damage. Remove the sheath fluid container from the Fluid Container holder and fill away from the instrument to prevent spills that could damage the instrument circuitry.

- 7 Remove the sheath fluid container from the Fluid Container holder.
- **8** Hold the Sheath fluid container under the CytoFLEX Sheath Fluid cubitainer ensuring the cubitainer is resting on a stable surface.
- **9** Fill the sheath fluid container.
- **10** Reinstall the sheath fluid harness onto the sheath fluid container.
- **11** Place the sheath fluid container back into the Fluid Container holder.

Replacing the 10 L Sheath Fluid Cubitainer

- 1 Confirm that the instrument is turned off or is in the standby state.
- 2 If necessary, remove any cardboard cutouts from the new CytoFLEX Sheath Fluid cubitainer. Remove the cap and seal from the new sheath fluid cubitainer. Be sure to completely remove the foil seal.

Misleading results could occur if you contaminate the sheath fluid. Be careful not to contaminate the sheath fluid. Do not let your fingers, paper towels, or other objects touch the pickup tube assembly.

3 Unscrew the plastic cap that secures the pickup tube assembly into the old sheath fluid cubitainer and lay it on a leakproof disposable container, such as a glove or beaker. Lift the pickup tube assembly straight up and out.

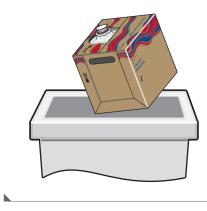

4 Inspect the pickup tube assembly and replace it if necessary.

5 Carefully insert the pickup tube assembly straight into the new sheath fluid cubitainer. Tighten the cap.

- **6** Place the 10 L sheath fluid cubitainer to the left of the instrument.
- 7 Put the cap from the new container onto the old container and dispose of the container properly.

Emptying the 4 L Waste Container

1 Confirm that the instrument is turned off or is in the standby state.

- **2** Remove the waste harness (see Figure 1.7). The waste harness from the Cytometer is connected to a 4 L waste container.
- **3** Remove the waste container from the Fluid Container holder.

Risk of biohazardous contamination if you have skin contact with the waste container, its contents, and its associated tubing. The waste container and its associated tubing might contain residual biological material and must be handled with care. Clean up spills immediately. Dispose of the contents of the waste container in accordance with your local regulations and acceptable laboratory procedures. Use proper personal protective equipment.

4 Empty the waste container. Dispose of the waste in accordance with your local regulations and acceptable laboratory procedures.

🔨 WARNING

Risk of chemical injury from bleach. To avoid contact with the bleach, use barrier protection, including protective eyewear, gloves, and suitable laboratory attire. Refer to the Safety Data Sheet for details about chemical exposure before using the chemical.

- **5** Add 400 mL of high-quality, fragrance-free, gel-free bleach (5 to 6% solution of sodium hypochlorite available chlorine) to the waste container.
- **6** Reinstall the waste harness in the waste container.
- 7 Put the waste container in the Fluid Container holder.

Emptying the 10 L Waste Cubitainer

1 Confirm that the instrument is turned off or is in the standby state.

 ${\bf 2} \quad {\rm Lift \ the \ waste \ cubitainer \ and \ swirl \ it \ before \ removing \ the \ cap.}$

Risk of biohazardous contamination if you have skin contact with the waste cubitainer, its contents, and its associated tubing. The waste cubitainer and it associated tubing might container residual biological material and must be handled with care. Clean up spills immediately. Dispose of the contents of the waste cubitainer in accordance with your local regulations and acceptable laboratory procedures.

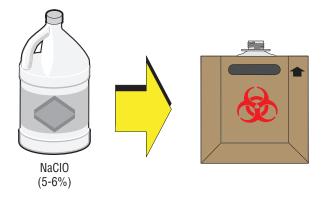

3 Unscrew the cap and lay it on a leakproof disposable container, such as a glove or beaker.

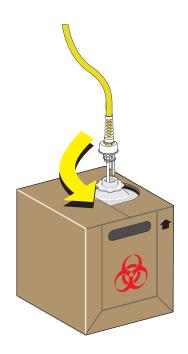

- **4** Empty the waste cubitainer according to your laboratory's procedures.
 - **NOTE** Take proper precautions to avoid spills if you are emptying the waste cubitainer into a sink, drain, or larger container. When moving the waste cubitainer to dispose of its contents, be sure the cap is secure to avoid spills.

Risk of chemical injury from bleach. To avoid contact with the bleach, use barrier protection, including protective eyewear, gloves, and suitable laboratory attire. Refer to the Safety Data Sheet for details about chemical exposure before using the chemical.

5 Put about 1 L of high-quality, fragrance-free, gel-free bleach (5 to 6% solution of sodium hypochlorite - available chlorine) in the 10 L waste cubitainer to cover the bottom of the cubitainer.

6 Replace the cap on the new waste cubitainer and securely tighten.

NOTE Properly dispose of the leakproof disposable container used in Step 3 after you screw the cap back on the waste container.

Managing the Maintenance Reminder

The maintenance reminder tracks the last maintenance date and initiates a reminder to complete maintenance for the following three items:

- Refill Deep Clean solution bottle (cleaning solution)
- Replace sheath fluid filter
- Replace sample peristaltic pump tubing

When reagents or parts have reached the designated use time limit in either days or number of uses,

the Maintenance Message icon Maintenance Message WI Semi-automatic Sampler Sheath Waste appears in the right side of the status bar.

1 Select the Maintenance Message icon <u>Maintenance Message</u> from the status bar to access the

Maintenance window. The expired item appears with a warning triangle | **A** to the left of the item listed.

Or

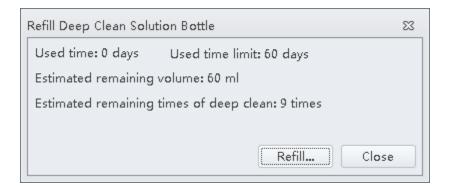

Select Maintenance in the Advanced menu. The Maintenance window appears. The expired

	۸	
item is displayed with a warning triangle	A	to the left of the item listed.

aintenance	٤	
Item	Last Maintenance Date	
🛕 Refill Deep Clean Solution Bottle	2014-01-05	
🛕 Replace Sheath Fluid Filter	2014-01-05	
🛕 Replace Peristaltic Pump Tubing	2013-10-06	
	Detail Close	

- **2** Select the desired item to manage, then choose one of the following:
 - To manage refilling the Deep Clean solution bottle, go to Step 3.
 - To manage replacing the sheath filter, skip to Step 4.
 - To manage replacing the sample peristaltic pump tubing, skip to Step 5.

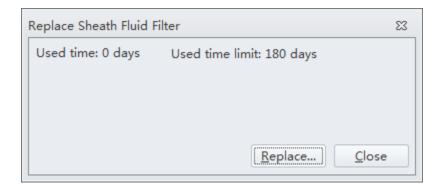

3 Select **Detail**. The Refill Deep Clean Solution Bottle window appears.

Select **Refill**. A pop-up window appears to reset the maintenance date as the current date that the maintenance was performed.

Refill Deep Clean Solution Bottle		23
Maintenance Date:	2017-10-12 -	
Use Time Limit:	60	days
Refilled Volume:	60	ml
	ок	Cancel

4 Select **Detail**. The Replace Sheath Fluid Filter window appears.

Select **Replace**. A pop-up window appears to reset the maintenance date as the current date that the maintenance was performed.

Replace Sheath Fluid Filter		
Maintenance Date:	2014-08-28 🔻	
Use time limit:	180	days
	<u>o</u> k	<u>C</u> ancel

5 Select **Detail**. The Replace Peristaltic Pump Tubing window appears.

Replace Peristaltic Pump Tubing		23
Used time: 0 days	: 0 days Used time limit: 180 days	
	Replace	

Select **Replace**. A pop-up window appears to reset the maintenance date as the current date that the maintenance was performed.

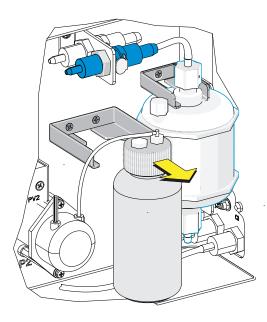

Replace Peristaltic Pump Tubing		23
Maintenance Date:	2014-08-28 🔻	
Use time limit:	180	days
	<u>O</u> K	<u>C</u> ancel

Adding the Deep Clean Solution

Check occasionally whether the Deep Clean solution in the Deep Clean solution bottle is sufficient. Replace the Deep Clean solution when the maintenance reminder prompts you to do so.

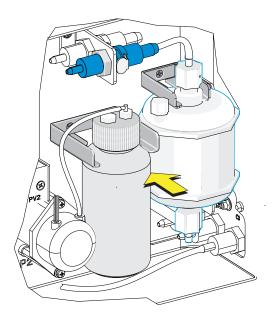

Risk of chemical injury from Contrad 70 reagent. To avoid contact with the Contrad 70 reagent, use barrier protection, including protective eyewear, gloves, and suitable laboratory attire. Refer to the Safety Data Sheet for details about chemical exposure before using the chemical.

- 1 Make 60 mL of Deep Clean solution by mixing 30 mL of Contrad 70 and 30 mL DI water in the Deep Clean solution bottle and swirl the solution gently to create the Deep Clean solution.
- **2** Verify that the Cytometer is in standby state or is turned off.
- **3** Remove the right-side cover of the instrument. Refer to Right-Side Cover Removal and Reinstallation.
- **4** Remove the Deep Clean solution bottle and open the cap.

5 Add 60 mL Deep Clean solution to the bottle.

6 Tighten the cap, and attach the Deep Clean solution bottle to the bracket.

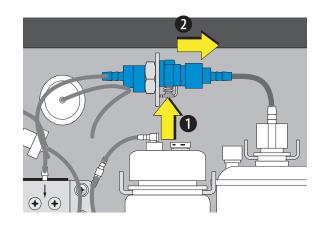

- 7 Reinstall the right-side cover (see Right-Side Cover Removal and Reinstallation), and fasten the thumbscrews.
- **8** Reset the maintenance reminder tracker. Refer to Managing the Maintenance Reminder.

Replacing the Sheath Fluid Filter

It is recommended to replace the sheath fluid filter every six months when the maintenance reminder prompts you to do so. The life of the filter is related to the quality of the sheath fluid used. If it is found that there are impurities in the light scatter pattern, replace the sheath fluid filter.

- 1 Select **Standby** on the left of the screen to place the instrument in standby state, or shut off the Cytometer's power.
- 2 Remove the right-side cover. Refer to Right-Side Cover Removal and Reinstallation.

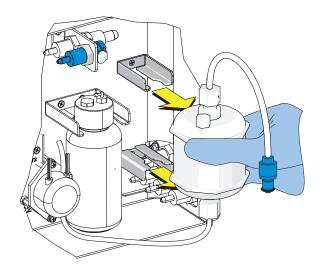

3 Press the spring piece on the quick connector and the Cytometer on the upper side of the filter, and disconnect the quick connector.

4 Repeat Step 3 for the quick connector behind the quick connector removed in the previous step.

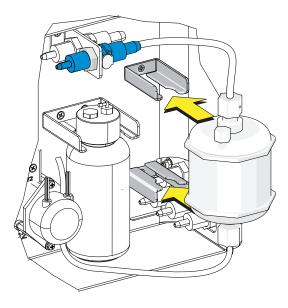

NOTE The spring is on the opposite side.

5 Remove the sheath fluid filter from the bracket.

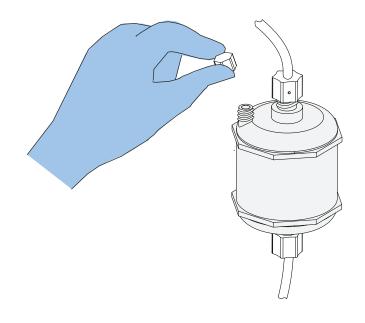

6 Connect the new, unused filter using the quick connector springs.

7 Attach the filter to the filter bracket.

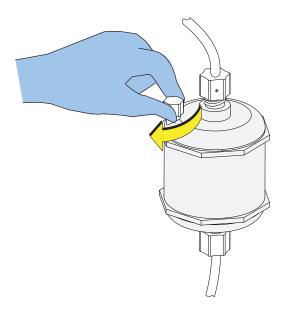

8 Remove the vent cap and set it aside.

- **9** Turn on the Cytometer and open the software.
- $10 \hspace{0.1 cm} \text{Select Prime in the Cytometer menu.}$

Risk of instrument damage. If the vent cap is not sealed tightly, unstable flow rate and leakage of the sheath fluid can occur.

11 Observe the liquid level in the filter during the prime cycle. When the liquid level reaches the upper section of the filter, reinstall the vent cap to prevent air leakage.

- **12** Reinstall the right-side cover (see Right-Side Cover Removal and Reinstallation) and lock the screw.
- **13** If the problem persists, contact us.
- **14** Run the system startup program. Refer to CHAPTER 4, Running the System Startup Program [with the Single Tube Loader].
- **15** Reset the maintenance reminder tracker. Refer to Managing the Maintenance Reminder.

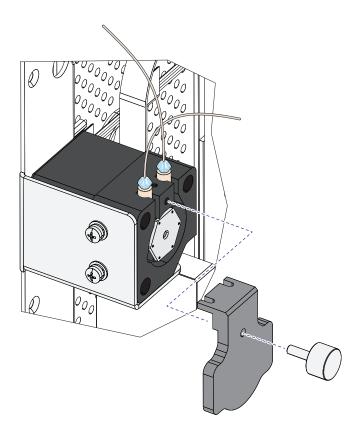

Unclogging the Sample Probe [With Sample Injection Mode Control Kit]

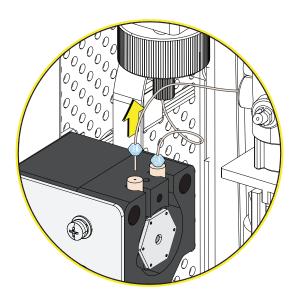

Risk of biohazardous contamination if you have skin contact with the sample probe or the sample peristaltic pump tubing. The sample probe and the sample peristaltic pump tubing could contain residual biological material and must be handled with care. Clean up spills immediately. Dispose of the sample probe and the sample peristaltic pump tubing in accordance with your local regulations and acceptable laboratory procedures.

- **1** Verify that the Cytometer is turned off.
- 2 Remove the right-side cover. Refer to Right-Side Cover Removal and Reinstallation.
- **3** Remove the front cover. Refer to Front Cover Removal and Reinstallation.

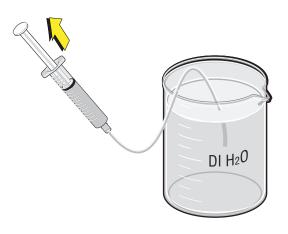

4 Remove the sample pump cover thumbscrew and the sample pump cover.

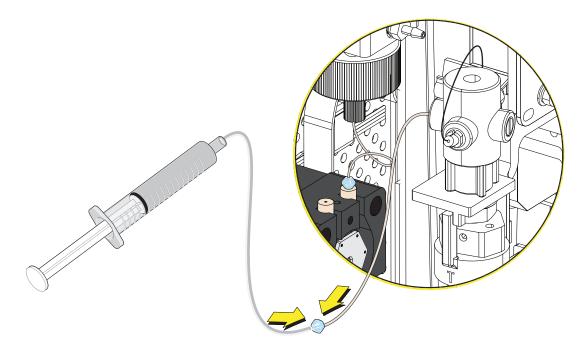

5 Remove the sample PEEK tubing from the sample peristaltic pump tubing.

6 Fill the sample line declog tool syringe with DI water.

 ${\bf 7} \quad {\rm Use \ the \ sample \ line \ declog \ tool, \ connect \ the \ tool \ tip \ to \ the \ end \ of \ the \ PEEK \ tube.}$

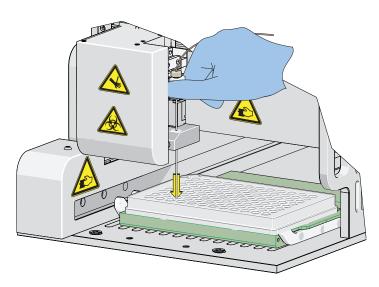

8 [For Plate Loader Sample Probe]:

a. Place the plate on the plate holder.

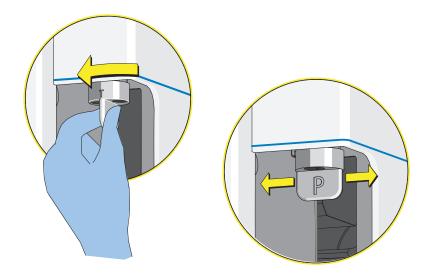

NOTE Ensure plate well A1 aligns with position A1.

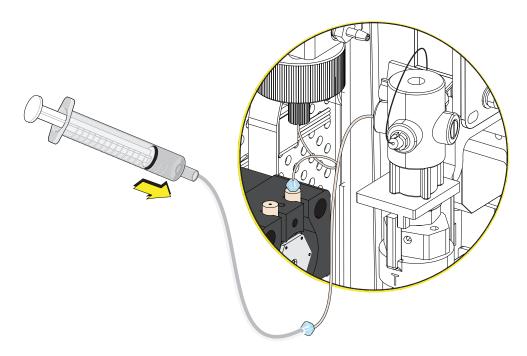

b. Pull back the plate holder and insert the sample probe into any well manually.

c. Turn the switch module knob to the left until the flat side of the knob is parallel to the front panel and the **P** is facing you. Ensure that the knob is turned as far as it will go.

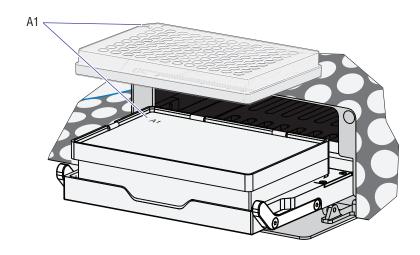

d. Gently squeeze the DI water into the plate.

Verify whether the DI water is dripping or spraying from the sample probe.

- If yes, the sample probe is un-clogged. Proceed to next step.
- If no dripping water or you cannot squeeze the syringe, the sample probe is severely clogged and you need to replace the sample probe. For instructions, refer to Replacing the Sample Probe and/or the Sample Peristaltic Pump Tubing.

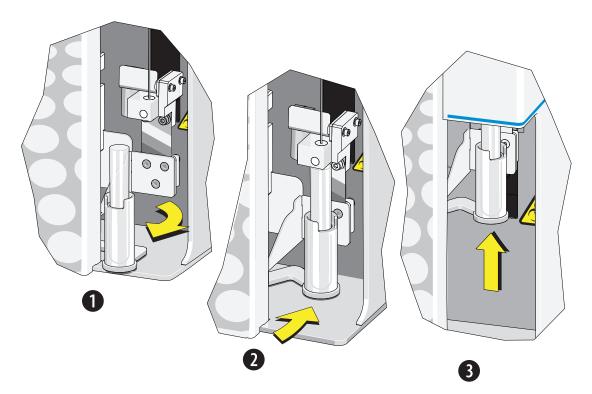

e. Remove plate from tube holder.

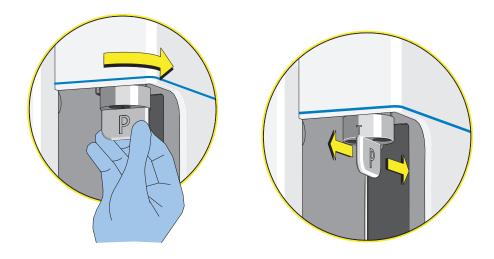

f. Skip to Step 10.

9 [For Sample Injection Mode Control Kit Sample Probe]:

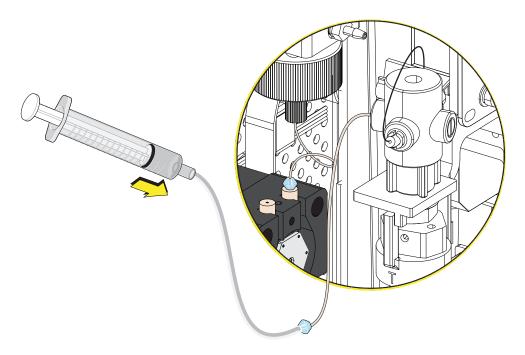

a. Pull out the tube holder manually. Place an empty tube in tube holder. Push back tube holder and lift the tube holder so the sample probe is inside the sample tube.

b. Turn the switch module knob to the right until the flat side of knob is perpendicular to the front panel and the **T** is facing you. Ensure that the knob is turned as far as it will go.

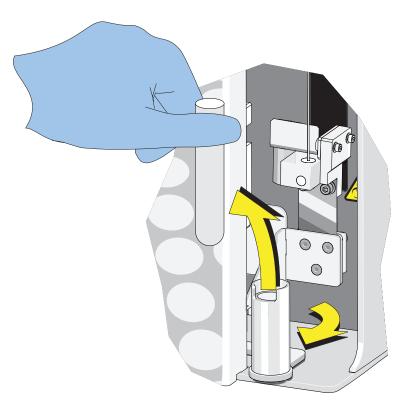

c. Gently squeeze the DI water into the tubing.

Verify whether the DI water is dripping or spraying from the sample probe.

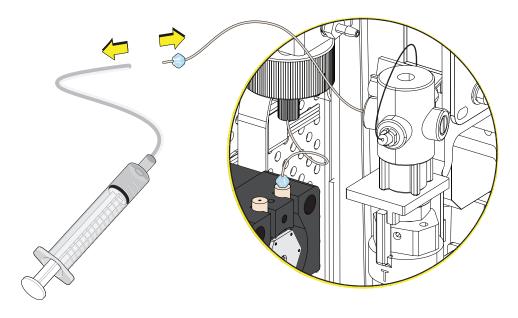

- If yes, the sample probe is un-clogged. Proceed to Step 10.
- If no dripping water or you cannot squeeze the syringe, the sample probe is severely clogged and you need to replace the sample probe. For instructions, refer to Replacing the Sample Probe and/or the Sample Peristaltic Pump Tubing.

d. Remove the tube from tube holder.

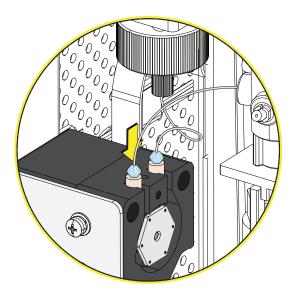

e. Proceed to Step 10.

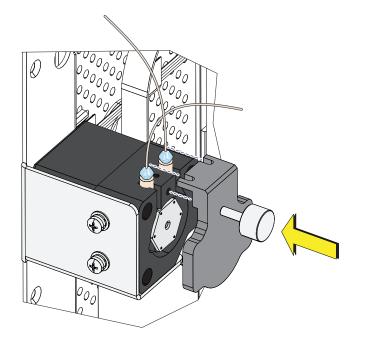

10 Disconnect the tool tip and the PEEK tube.

11 Connect the PEEK tubing to the sample peristaltic pump tubing.

12 Install the sample pump cover.

- **13** Reinstall the right-side cover (see Right-Side Cover Removal and Reinstallation), and lock with the screw.
- 14 Reinstall the front cover. Refer to Front Cover Removal and Reinstallation.

- **15** Start the software. Turn on the instrument. Refer to CHAPTER 4, Daily Startup.
- **16** Select **Initialize** from the Cytometer Menu or select **Initialize** in the Data Acquisition Control screen.
- **17** Select **Backflush** from the Cytometer Menu or select **Backflush** in the Data Acquisition Control screen.

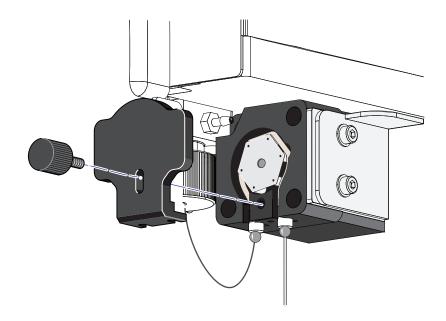

Risk of biohazardous contamination if you have skin contact with the sample probe or the sample peristaltic pump tubing. The sample probe and the sample peristaltic pump tubing could contain residual biological material and must be handled with care. Clean up spills immediately. Dispose of the sample probe and the sample peristaltic pump tubing in accordance with your local regulations and acceptable laboratory procedures.

- **1** Verify that the Cytometer is turned off.
- **2** Remove the right-side cover. Refer to Right-Side Cover Removal and Reinstallation.
- **3** Remove the front cover. Refer to Front Cover Removal and Reinstallation.

4 Remove the sample pump cover thumbscrew and the sample pump cover.

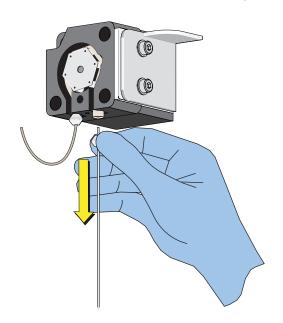

5 [For Single Tube Sample Station]:

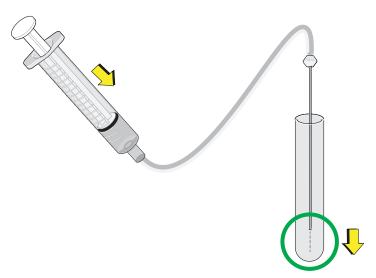

a. Fill the sample line declog tool syringe with DI water.

b. Remove the sample probe from the single tube sample station.

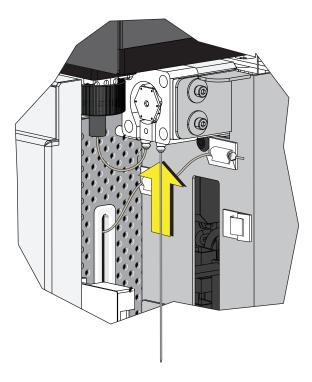

c. Connect the tool to the end of the sample probe, gently squeeze the DI water into an empty tube.

Verify whether the DI water is dripping or spraying from the sample probe.

- If yes, the sample probe is un-clogged. Proceed to next step.
- If no dripping water or you cannot squeeze the syringe, the sample probe is severely clogged and you need to replace the sample probe. For instructions, refer to Replacing the Sample Probe and/or the Sample Peristaltic Pump Tubing.

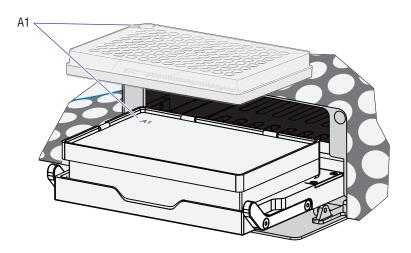

d. Disconnect the sample probe from the declog tool. Connect the sample probe to the sample peristaltic pump tubing.

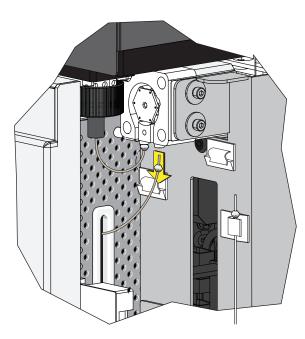

e. Skip to Step 7.

6 [For Plate Loader]:

a. Place the plate on the plate holder.

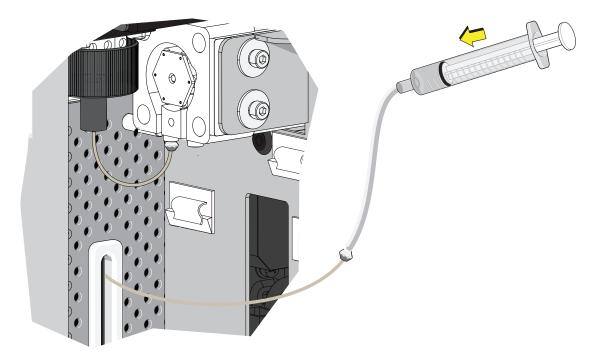

NOTE Ensure plate well A1 aligns with position A1.

b. Remove the plate loader PEEK tubing from the sample peristaltic pump tubing.

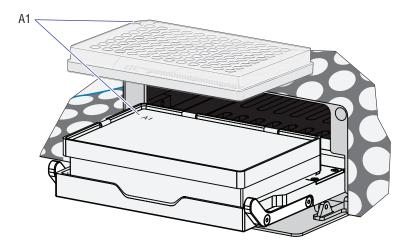

c. Fill the sample line declog tool syringe with DI water.

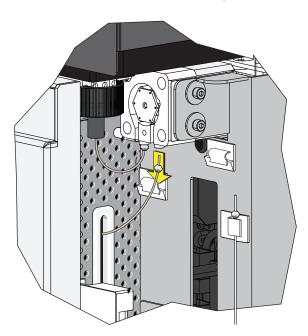

d. Use the sample line declog tool, connect the tool tip to the end of the PEEK tube.

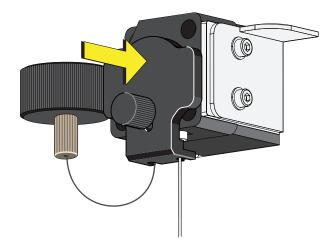

- **e.** Gently squeeze the DI water into the plate. Verify whether the DI water is dripping or spraying from the sample probe.
 - If yes, the sample probe is un-clogged. Proceed to Step 7.
 - If no dripping water or you cannot squeeze the syringe, the sample probe is severely clogged and you need to replace the sample probe. For instructions, refer to Replacing the Sample Probe and/or the Sample Peristaltic Pump Tubing.
- **f.** Disconnect the Peek tube from the Declog tool.
- g. Remove plate from tube holder.

h. Connect the plate loader PEEK tubing to the sample peristaltic pump tubing.

- i. Proceed to Step 7.
- **7** Reinstall the sample pump cover.

- **NOTE** To ensure the proper placement of the sample probe, push the sample pump cover up while installing the thumbscrew.
- **8** Reinstall the right-side cover (see Right-Side Cover Removal and Reinstallation), and lock with the screw.
- **9** Reinstall the front cover. Refer to Front Cover Removal and Reinstallation.

- **10** Start the software. Turn on the instrument. Refer to CHAPTER 4, Daily Startup.
- **11** Select **Initialize** from the Cytometer Menu or select **Initialize** in the Data Acquisition Control screen.
- **12** Select **Backflush** from the Cytometer Menu or select **Backflush** in the Data Acquisition Control screen.

Replacing the Sample Probe and/or the Sample Peristaltic Pump Tubing

WARNING

Risk of biohazardous contamination if you have skin contact with the sample probe or the sample peristaltic pump tubing. The sample probe and the sample peristaltic pump tubing could contain residual biological material and must be handled with care. Clean up spills immediately. Dispose of the sample probe and the sample peristaltic pump tubing in accordance with your local regulations and acceptable laboratory procedures.

- **IMPORTANT** Replace the sample probe only if it is bent or severely clogged. Beckman Coulter recommends unclogging the sample probe before attempting to replace the sample probe. For instruction on unclogging sample probe, refer to Unclogging the Sample Probe [With Sample Injection Mode Control Kit] or Unclogging the Sample Probe [Without Sample Injection Mode Control Kit].
- **IMPORTANT** If you need to replace the single tube sample probe assembly and you have the Sample Injection Mode Control Kit installed on your CytoFLEX instrument, pull the probe out of the CytoFLEX Sample Injection Mode Control Kit and push the new probe into place.

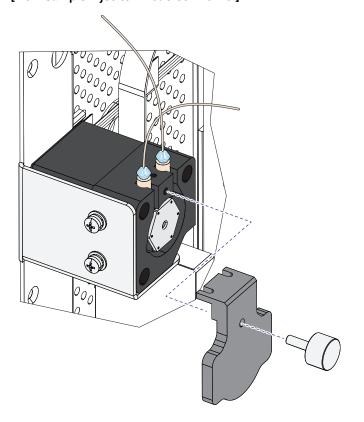

Beckman Coulter recommends replacing the tubing of the sample peristaltic pump every six months, or sooner. High sample volume, degradation of the stability of the sample flow, and increase of the CV may indicate the need to replace the tubing more frequently.

NOTE Ensure you replace the sample probe with a sample probe that has the same color jewel.

- **1** Place the instrument in standby state.
- **2** Remove the right-side cover. Refer to Right-Side Cover Removal and Reinstallation.
- **3** Remove the front cover. Refer to Front Cover Removal and Reinstallation.

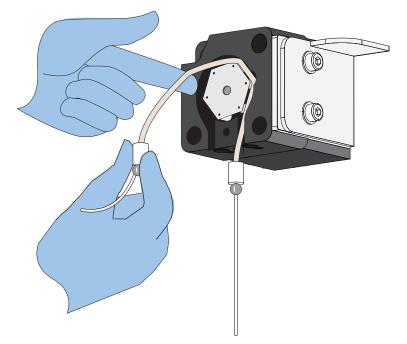

- [Without Sample Injection Mode Control Kit]
- **4** Remove the sample pump cover thumbscrew and the sample pump cover.

[With Sample Injection Mode Control Kit]

 ${\bf 5} \quad {\rm Take \ out \ the \ sample \ peristaltic \ pump \ tubing.}$

[Without Sample Injection Mode Control Kit]

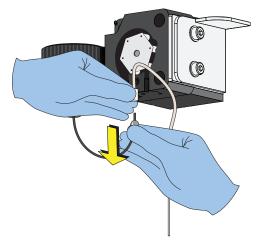

[With Sample Injection Mode Control Kit]

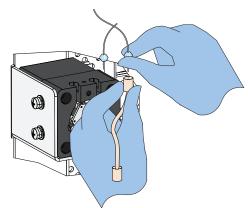

Risk of optical misalignment. Removing the PEEK tubing from the bottom of the flow cell could cause misalignment of the optical components. Do not remove the PEEK tubing from the bottom of the flow cell.

6 Remove the sample PEEK tubing from the sample peristaltic pump tubing.

[Without Sample Injection Mode Control Kit]

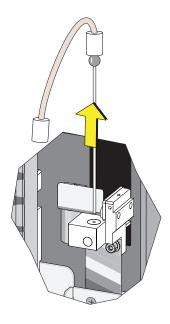

[Without Sample Injection Mode Control Kit]: Proceed to Step 7.

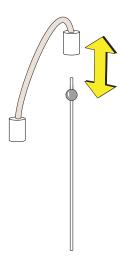

[With Sample Injection Mode Control Kit]

[With Sample Injection Mode Control Kit]: Skip to Step 9.

7 [Without Sample Injection Mode Control Kit]: Lift the sample probe out of the wash station.

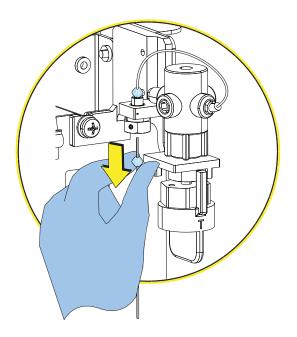

8 [Without Sample Injection Mode Control Kit]: Remove the sample peristaltic pump tubing from the sample probe.

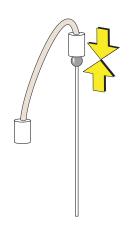

Skip to Step 10.

9 [With Sample Injection Mode Control Kit]: Remove the sample probe from the metal block if you need replace the sample probe.

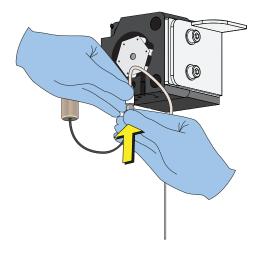

Proceed to Step 10.

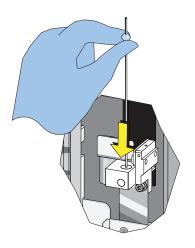

- 10 Dispose of the old sample probe and/or sample peristaltic pump tubing in accordance with your local regulations and acceptable laboratory procedures.
 [Without Sample Injection Mode Control Kit]: Proceed to Step 11.
 [With Sample Injection Mode Control Kit]: Skip to Step 13.
- **11** [Without Sample Injection Mode Control Kit]: Connect the sample peristaltic pump tubing to the sample probe.

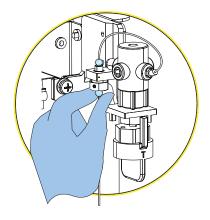

12 [Without Sample Injection Mode Control Kit]: Connect the sample PEEK tubing to the sample peristaltic pump tubing.

13 [With and Without Sample Injection Mode Control Kit]: Slide the sample probe into the wash station.

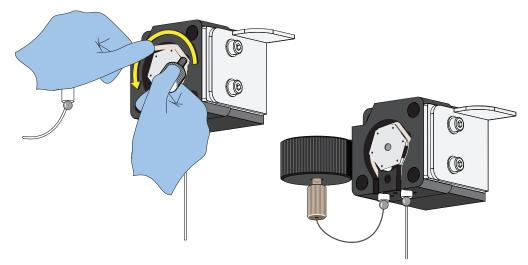

[Without Sample Injection Mode Control Kit]: Skip to Step 15. [With Sample Injection Mode Control Kit]: Proceed to Step 14. **14** [With Sample Injection Mode Control Kit]: Connect the sample probe to the metal block.

Proceed to Step 15.

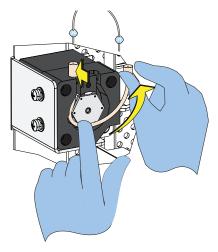

- **15** Install the sample peristaltic pump tubing, taking care not to use any sharp tools, ensuring that the tube is fully inserted into the groove.
 - **NOTE** Use the sample pump cover thumbscrew to insert the sample peristaltic pump tubing into the groove while rotating the sample pump.

[Without Sample Injection Mode Control Kit]

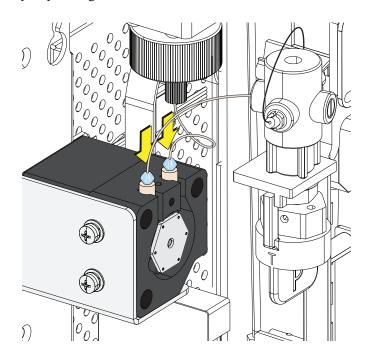

[Without Sample Injection Mode Control Kit]: Skip to Step 17.

[With Sample Injection Mode Control Kit]: Proceed to Step 16.

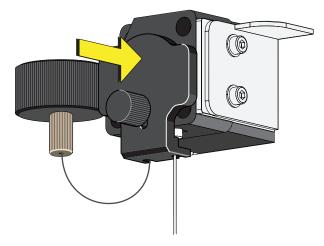

16 [With Sample Injection Mode Control Kit]: Connect the PEEK tubing to the sample peristaltic pump tubing.

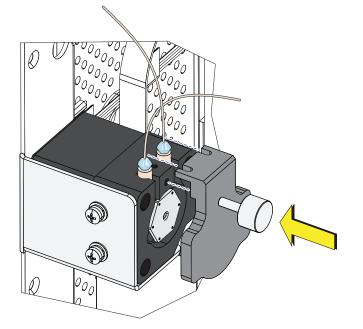

Proceed to Step 17.

17 Install the sample pump cover.

[Without Sample Injection Mode Control Kit]

[With Sample Injection Mode Control Kit]

NOTE To ensure the proper placement of the sample probe, push the sample pump cover up while installing the thumbscrew.

[With and Without Sample Injection Mode Control Kit]: Proceed to Step 18.

18 Reinstall the right-side cover (see Right-Side Cover Removal and Reinstallation), and lock with the screw.

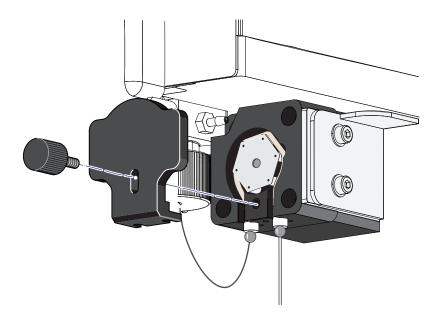

Replacing the Sample Probe Assembly [With Plate Loader]

IMPORTANT If you have the Sample Injection Mode Control Kit installed on your CytoFLEX flow cytometer, contact us to replace the sample probe assembly.

Risk of biohazardous contamination if you have skin contact with the sample probe or the sample peristaltic pump tubing. The sample probe and the sample peristaltic pump tubing could contain residual biological material and must be handled with care. Clean up spills immediately. Dispose of the sample probe and the sample peristaltic pump tubing in accordance with your local regulations and acceptable laboratory procedures.

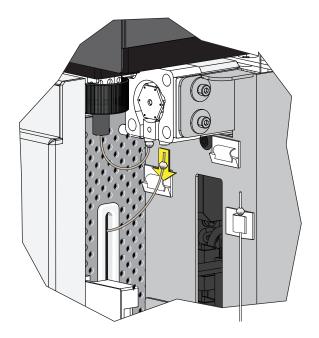

- **1** Turn the Cytometer's main power switch off.
- **2** Remove the right-side cover. Refer to CHAPTER 12, Right-Side Cover Removal and Reinstallation.
- **3** Remove the front cover. Refer to CHAPTER 12, Front Cover Removal and Reinstallation.
- **4** Remove the sample pump cover thumbscrew and the sample pump cover.

A CAUTION

Risk of optical misalignment. Removing the PEEK tubing from the bottom of the flow cell could cause misalignment of the optical components. Do not remove the PEEK tubing from the bottom of the flow cell.

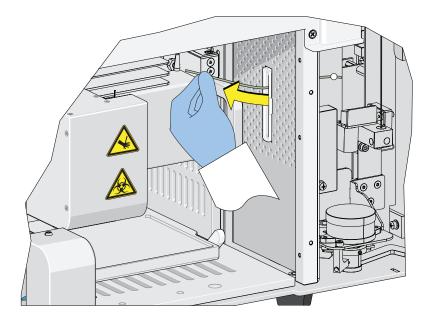

5 Remove the plate loader PEEK tubing from the sample peristaltic pump tubing.

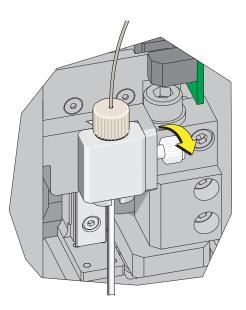

<u>A</u>CAUTION

The plate loader PEEK tubing can be deformed, which could affect sample flow. When routing the plate loader PEEK tubing to and from the Sample Station, be careful not to pinch, crimp, stretch, or break the tubing.

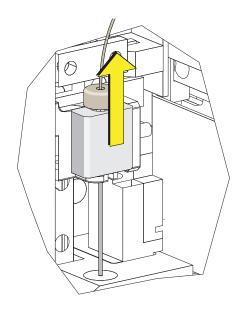

6 Pull the plate loader PEEK tubing through the slot so the tubing sits inside the instrument.

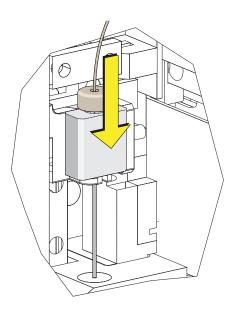

7 Loosen the white plastic thumbscrew behind the plate loader sample probe.

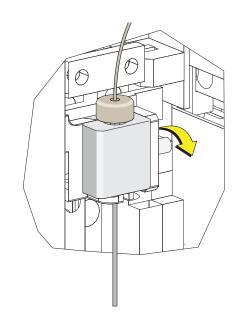

8 Lift the plate loader sample probe assembly straight up to remove it from the probe holder.

9 Align the tongue on the plate loader sample probe assembly with the groove in the probe holder and slide the probe down until it is flush with the probe holder.

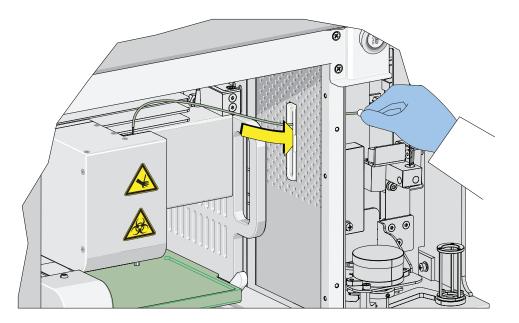

10 Tighten the white plastic thumbscrew.

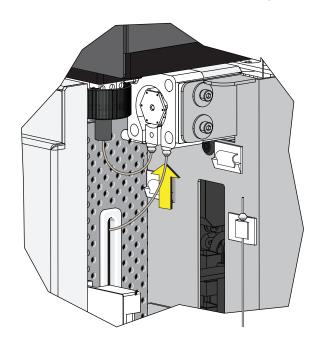

The plate loader PEEK tubing can be deformed which could affect sample flow. When routing the plate loader PEEK tubing to and from the Sample Station, be careful not to pinch, crimp, stretch, or break the tubing.

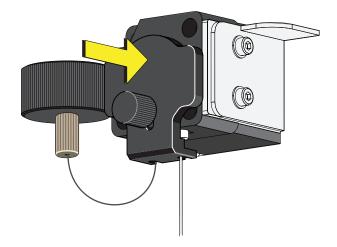

11 Slide the new plate loader PEEK tubing through the slot into the single tube sample station area.

12 Connect the sample peristaltic pump tubing to the plate loader PEEK tubing.

13 Install the sample pump cover.

- **NOTE** To ensure the proper placement of the sample probe, push the sample pump cover up while installing the thumbscrew.
- **14** Reinstall the right-side cover (refer to CHAPTER 12, Right-Side Cover Removal and Reinstallation), and lock with the screw.
- **15** Close the top cover.

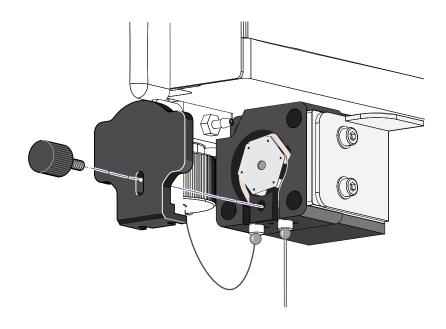

16 Turn the Cytometer's main power switch on.

Changing the Sample Probe from the Single Tube Sample Station to the Plate Loader [CytoFLEX With Plate Loader]

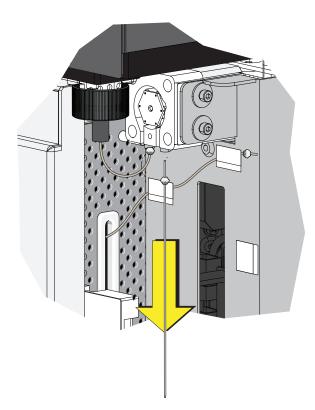

Risk of biohazardous contamination if you have skin contact with the sample probe or the sample peristaltic pump tubing. The sample probe and the sample peristaltic pump tubing could contain residual biological material and must be handled with care. Clean up spills immediately.

- **NOTE** If you have the Sample Injection Mode Control Kit installed on your CytoFLEX flow cytometer, refer to APPENDIX C, Switching the Sample Probe from the Single Tube Sample Station to the Plate Loader [With Sample Injection Mode Control Knob] for instructions on switching between the single tube mode and the plate loader mode.
- **1** Switch to the Plate Loader sample injection mode. Refer to CHAPTER 4, Selecting the Plate Loader Sample Injection Mode [With Plate Loader].
- **2** Lift the top cover.
- **3** Remove the right-side cover. Refer to CHAPTER 12, Right-Side Cover Removal and Reinstallation.
- 4 Remove the front cover. Refer to CHAPTER 12, Front Cover Removal and Reinstallation.

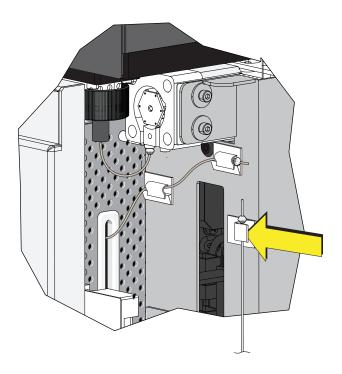

5 Remove the sample pump cover thumbscrew and the sample pump cover.

6 Remove the sample probe from the single tube sample station.

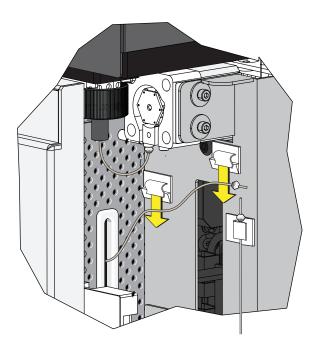

7 Place the sample probe in the white clip located on the right side of the sample station.

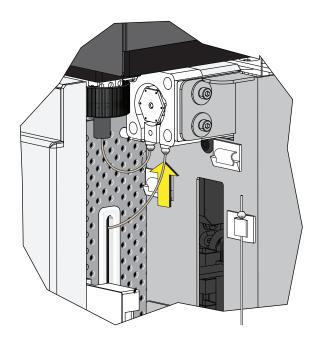

A CAUTION

The plate loader PEEK tubing can be deformed which could affect sample flow. When removing the plate loader PEEK tubing from the white clips, be careful not to pinch, crimp, stretch, or break the tubing.

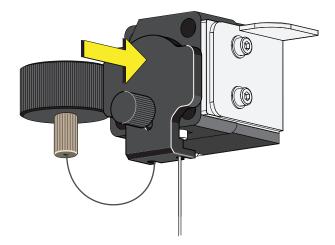

8 Remove the plate loader PEEK tubing from the two white clips located at the top of the sample station.

9 Connect the plate loader PEEK tubing to the sample peristaltic pump tubing.

10 Reinstall the sample pump cover.

- **NOTE** To ensure the proper placement of the sample probe, push the sample pump cover up while installing the thumbscrew.
- **11** Reinstall the right-side cover (refer to CHAPTER 12, Right-Side Cover Removal and Reinstallation), and lock with the screw.
- **12** Close the top cover.

13 Turn the Cytometer's main power switch on.

Changing the Sample Probe from the Plate Loader to the Single Tube Sample Station [CytoFLEX With Plate Loader]

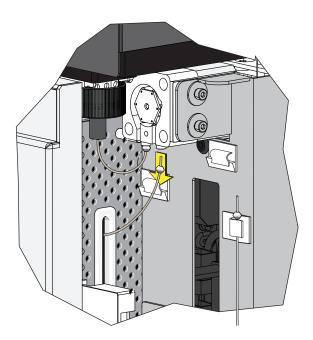

🔨 WARNING

Risk of biohazardous contamination if you have skin contact with the sample probe or the sample peristaltic pump tubing. The sample probe and the sample peristaltic pump tubing could contain residual biological material and must be handled with care. Clean up spills immediately.

- **NOTE** If you have the Sample Injection Mode Control Kit installed on your CytoFLEX flow cytometer, refer to APPENDIX C, Switching the Sample Probe from the Plate Loader to the Single Tube Sample Station [With Sample Injection Mode Control Knob] for instructions on switching between the single tube mode and the plate loader mode.
- **1** Switch to either the Semi-Automatic or manual sample injection mode. Refer to CHAPTER 4, Selecting the Proper Sample Injection Mode.
- **2** Lift the top cover.
- **3** Remove the right-side cover. Refer to CHAPTER 12, Right-Side Cover Removal and Reinstallation.
- 4 Remove the front cover. Refer to CHAPTER 12, Front Cover Removal and Reinstallation.

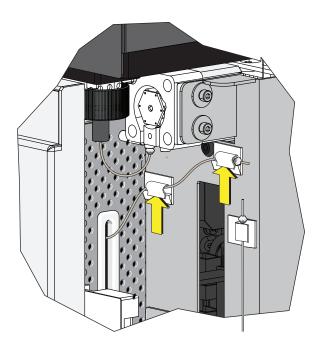

- **5** Remove the sample pump cover thumbscrew and the sample pump cover.

6 Remove the plate loader PEEK tubing from the sample peristaltic pump tubing.

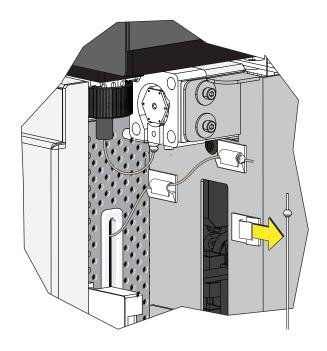

The plate loader PEEK tubing can be deformed, which could affect sample flow. When placing the plate loader PEEK tubing in the white clips, be careful not to pinch, crimp, stretch, or break the tubing.

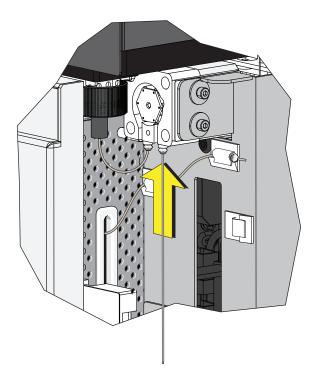

7 Place the plate loader PEEK tubing in the two white clips located at the top of the sample station.

8 Remove the sample probe from the white clip located on the right side of the sample station.

9 Connect the sample probe to the sample peristaltic pump tubing.

10 Run CHAPTER 11, Daily Clean.

Inspecting the Liquid Flow Path for Leaks

The liquid flow tubing can be aged and cracked or the connector can be loosened. Liquid leakage can lead to biological harm. To reduce occurrence of such problems, carry out liquid flow tubing inspection every six months and ensure that the Fluidics module functions without any leaks. If any leaks are found when using the Cytometer, stop the experiment immediately and look for the source of the leak.

- 1 Remove the right-side cover of the instrument. Refer to Right-Side Cover Removal and Reinstallation.
- **2** Perform instrument initialization to enable the sheath fluid to flow. Refer to CHAPTER 4, Initializing the Instrument.
- **3** Check the connectors and tubes in the Fluidics module, and check whether any liquid leaks out.
- 4 Check the sheath fluid, backflush, and waste liquid connector on the back of the Cytometer, and check whether any liquid leaks out.
- **5** Place the instrument in standby state, complete the priming procedure, and check whether the Fluidics module has any liquid leakage.
- **6** If any liquid leaks out and the point of liquid leakage is from the filter, try to tighten the filter connector and check again. If the problem persists, replace the sheath fluid filter.
- **7** If any liquid leaks out from any other connector or tube, stop running the instrument and contact us.

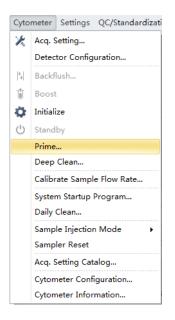

Priming the Flow Cell

Priming of the flow cell is required when:

- The instrument is not used for a long period of time.
- The sheath fluid is refilled.
- The instrument is being used for the first time.
- The signal of the instrument is poor or the signal drifts.
- The sheath filter is replaced.
- 1 Ensure that the instrument is in standby state.

NOTE If the instrument is not already in the standby state, select **Standby** from the Cytometer Menu or select **Standby** in the Data Acquisition Control screen.

2 Select **Prime** from the Cytometer Menu to prime the flow cell. Wait for the beep and for the Instructions window to close.

Otherwise, look for the status bar to display that priming has completed.

[2016-11-22 16:31:03] Completed Prime.

3 Run Daily Clean to clean the sample line. Refer to CHAPTER 11, Daily Clean.

Replacing the Plate Holder [With Plate Loader]

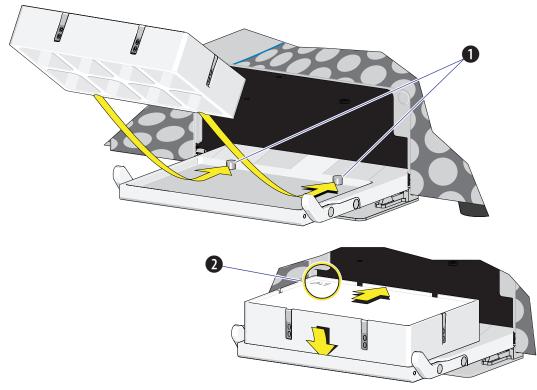

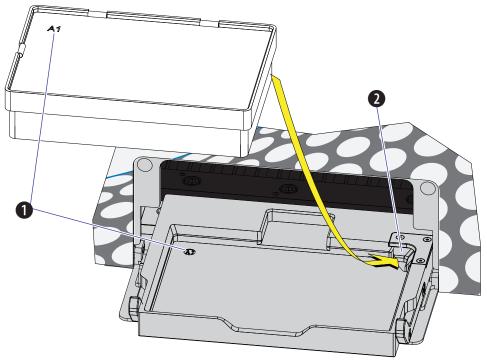

Figure 12.1 Plate Holder Stage (Standard Plate Loader)

- 1. Pins
- 2. Position A1

Figure 12.2 Plate Holder Stage (Plate Loader DW)

- 1. Position A1
- 2. Spring lock

The plate holder must be secured tightly to the plate holder stage with position A1 located in the top, left corner of the plate holder stage (refer to Figure 12.1 and Figure 12.2) to prevent instrument damage.

Slide the notches on the bottom of the plate holder (refer to Figure 1.17) over the pins (refer to Figure 12.1 and Figure 12.2).

Plate Loader Module Removal and Reinstallation [With Plate Loader]

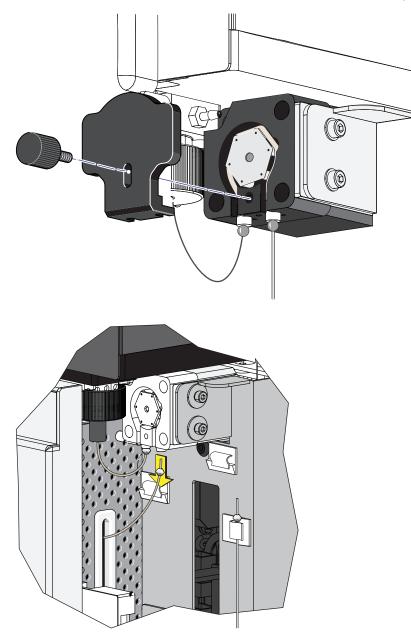

MARNING

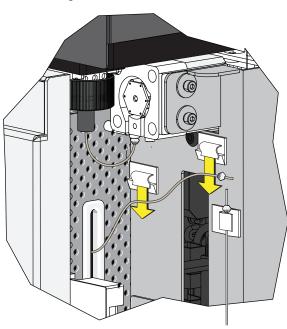

Risk of contamination from biohazardous material. Always wear PPE when performing this procedure as you can contact components with blood residue.

Removal

- **1** Power down the instrument and disconnect the power cable from the wall.
- 2 Lift the top cover and remove the front cover. Refer to Front Cover Removal and Reinstallation.
- **3** Place absorbent material on the stage in the Plate Loader module.

- **4** In the Sample Station, disconnect that end of the plate loader PEEK tubing.
 - If the plate loader PEEK tubing is attached to the sample peristaltic pump tubing, remove the sample pump cover and disconnect the plate loader PEEK tubing.

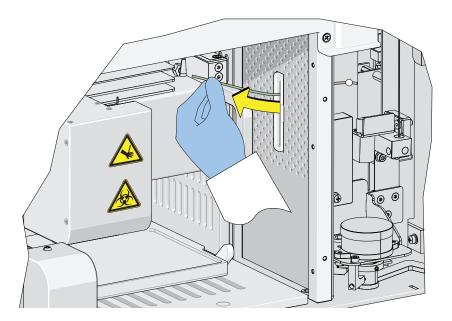

• If the plate loader PEEK tubing is in the plate loader PEEK tubing clips, remove the tubing from the clips.

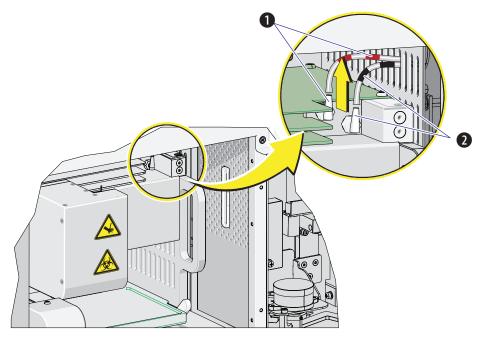

The PEEK tubing can be deformed which could affect sample flow. When routing the Plate Loader PEEK tubing to and from the Sampling Station, be careful not to pinch, crimp, stretch, or break the tubing.

5 Pull the plate loader PEEK tubing through the slot so the tubing sits inside the instrument.

6 Remove the red and black marked tubes that are attached to the left and right connectors in the Plate Loader module, respectively, as shown in Figure 12.3.

Figure 12.3 Removing the Tubings from the Fluidics Module to the Plate Loader

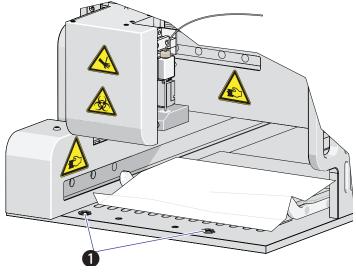

1. Red

2. Black

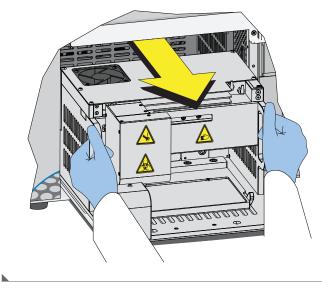

7 Remove the two countersunk M4 x 10 Phillips-head screws in the Plate Loader module. Refer to Figure 12.4.

- 1. Securing screws
- **8** Slide the Plate Loader module out of the Cytometer. Refer to Figure 12.5.

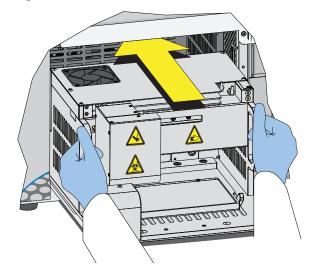

Installation

- 1 Remove the front cover. Refer to Front Cover Removal and Reinstallation.
- 2 Remove the right-side cover. Refer to Right-Side Cover Removal and Reinstallation.
- **3** Slide the Plate Loader module into the Cytometer. Refer to Figure 12.6.

Figure 12.6 Installing the Plate Loader into the Cytometer

4 Install the two countersunk M4 x 10 Phillips-head screws in the Plate Loader module. Refer to Figure 12.7.

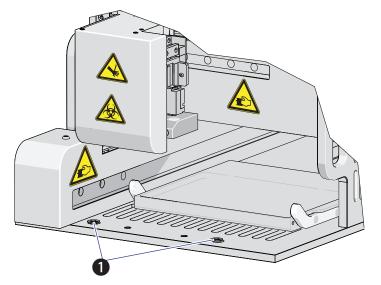

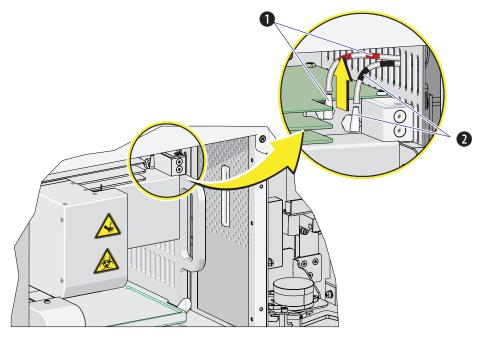

Figure 12.7 Plate Loader Module Securing Screws

1. Securing screws

5 Install the red and black marked tubings that are attached to the left and right connectors in the Plate Loader module, respectively, as shown in Figure 12.8.

Figure 12.8 Connecting the Tubings from the Fluidics Module to the Plate Loader

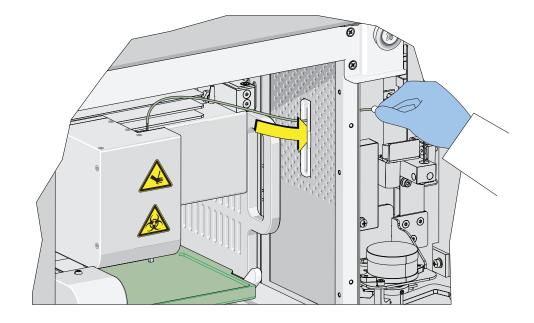

1. Red

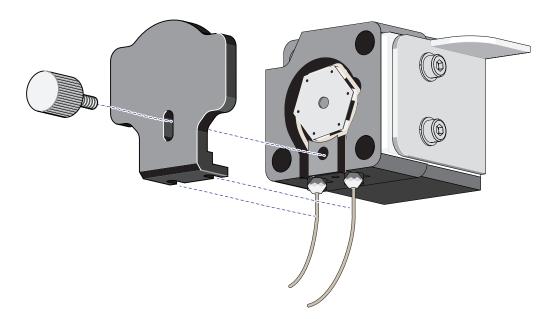

2. Black

The PEEK tubing can be deformed, which could affect sample flow. When routing the Plate Loader PEEK tubing to and from the Sampling Station, be careful not to pinch, crimp, stretch, or break the tubing.

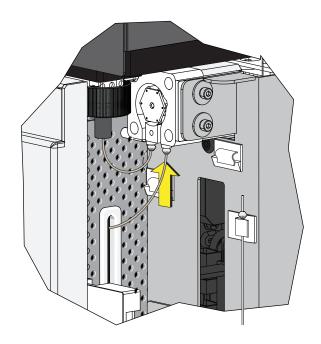

6 Slide the new plate loader PEEK tubing through the slot into the single tube sample station area.

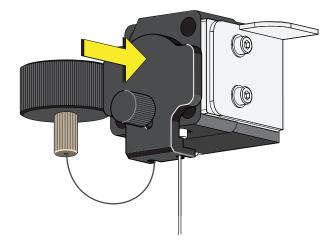

7 Remove the sample pump cover thumbscrew and the sample pump cover.

8 Connect the plate loader PEEK tubing to the sample peristaltic pump tubing.

9 Reinstall the sample pump cover.

- **NOTE** To ensure the proper placement of the sample probe, push the sample pump cover up while installing the thumbscrew.
- **10** Replace the right-side cover (refer to CHAPTER 12, Right-Side Cover Removal and Reinstallation), and lock with the screw.

11 Replace the front cover. Refer to Front Cover Removal and Reinstallation.

12 Close the top cover.

- **13** Turn the Cytometer's main power switch on.
- 14 Verify that the system is operating correctly by running QC in the Plate Loader mode. Refer to CHAPTER 5, Preparing the QC Sample [With Plate Loader] and CHAPTER 5, Collecting QC Data [With Plate Loader].

Changing the Event Rate Setting

The Event Rate Setting adjusts the collection setting around signal measurement so that the system is able to optimize the acquisition of events ensuring optimal sensitivity and abort rates when acquiring at higher event rates.

1 Select **Event Rate Setting** in the Advanced menu. The Event Rate Setting window appears.

Event Rate Setting	23		
When the event rate and abort rate are high (event rate > 10,000 events/second) , please set to High mode. Otherwise, please choose Default mode.			
 Default 			
◎ High			
	OK Cancel		

2 Select High if the event rate is >10,000 events/second.

Or

Select **Default** if the event rate is <10,000 events/second.

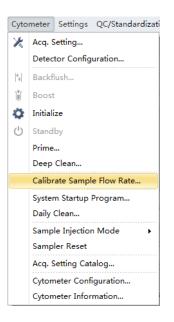

З Select ок.

Nonscheduled Replacement/Adjustment

Calibrating the Sample Flow Rate

Calibrate the sample flow rate:

- After replacing the sample peristaltic pump tubing.
- If a precise volumetric measurement is required. The accuracy of concentration calculations can be affected by the sample flow rate.
- 1 Verify that the instrument is in the initialized state.
- 2 Select Calibrate Sample Flow Rate in the Cytometer menu.

3 Select the flow rate to be calibrated.

If you want to calibrate all flow rates at once, fast calibration is recommended. The rate selected in the Calibrate Sample Flow Rate window overrides the rate selected in the Acquisition window.

Calibrate S	ample Flow Rate	23	
Flow Rate			
Fast:	60 µL/min	Calibrate	
Medium:	30 µL/min	Calibrate	
Slow:	10 µL/min	Calibrate	
(if you want to calibrate all flow rate at one time, fast calibration is recommended.)			

4 Prepare one sample tube with 1 mL of clean deionized water then use a calibrated analytical balance to measure the weight of the prepared sample tube. Record the weight and enter it into the software.

Calibrate Sample Flow Rate(Fast)		
Step1: Please prepare at least 1mL of deionized water,		
and enter the weight g.		
Acquisition Duration(minutes):		
<u>N</u> ext Cancel		

NOTE The weight section accepts up to four decimal places.

5 Select **Next** and put the sample tube in the sample loading position (see Figure 1.12).

6 Select **Initialize** to start the sample run.

Calibrating the Sample Flow Rate [With Plate Loader]

Calibrate the sample flow rate:

- After replacing the sample peristaltic pump tubing.
- If a precise volumetric measurement is required.

The accuracy of concentration calculations can be affected by the sample flow rate.

- 1 Verify that the instrument is in the initialized state.
- 2 Select **Calibrate Sample Flow Rate** in the Cytometer menu. The plate loader automatically ejects the plate holder stage.

3 Select the sampling speed that needs to be calibrated and select **Calibrate**. The Calibrate Sample Flow Rate window appears.

Calibrate Sample Flow Rate	23	
Flow Rate:		
Fast: 60 µL/min	Calibrate	
Medium: 30 µL/min	Calibrate	
Slow: 10 µL/min	Calibrate	
(If you want to calibrate all flow rate at calibration is recommended.)	one time, fast	
Calibrate Sample Flow Rate(Fast)		
Step1: Please prepare at least 250µL of	f deionized water,

Setting Laser Delay

Laser delay is preset for QC. Only change the laser delay if the software prompts you that there is a difference in the actual delay and the default delay.

E	Error	8	Ī
		The difference between the actual delay below and default delay is greater than 5µs, please adjust to the actual delay value and set it as default, try again, if the problem persists, please check fluid system. Laser: Red, Actual Delay: -16, Default Delay: -40	

1 Select **Delay Setting** from the Advanced menu. The Delay Setting window appears.

Delay Setting				23
Detector	Current(µs)	Calc(µs)	Set Calc to C	urrent
Red	-45.12 ‡	-	Set]
Blue	0.00	-	Set]
Violet	38.08 📜	-	Set]
			Set All	
Set As Defa	ult <u>D</u> efau	lt	<u>C</u> lo	ose

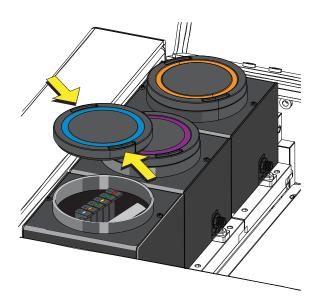

- **2** Set the current to the actual delay for the specified detector stated in the error message received.
- **3** Select **Set as Default**.

4 Select Close.

Replacing the Optical Filter

When the optical filter is damaged or it is required to use an optical filter with a non-standard wavelength, you must replace the optical filter yourself. For the specific part number of the optical filter, consult your Beckman Coulter Representative or your local dealer.

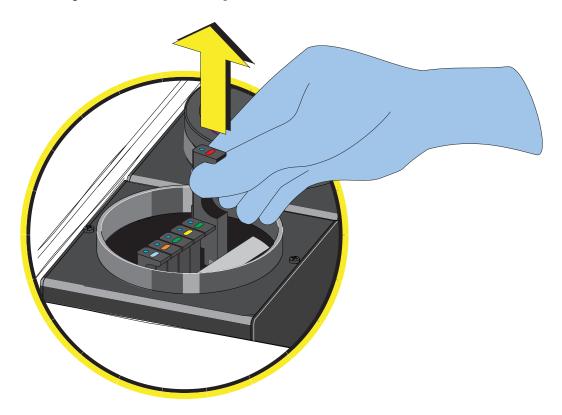

- 1 Confirm that the instrument is in the standby state or that the instrument is turned off.
- **2** Confirm the laser corresponds to the channel in which the optical filter is to be replaced.
- **3** Open the top cover of the instrument.
- **4** Press the spring piece of the WDM cap corresponding to the laser, and open the WDM cap.

Risk of damage to the optical filter. Do not touch the optical filter glass piece. Touching the optical filter glass piece can obscure and/or scratch the optical filter glass piece.

Risk of damage to the optical filter. Pull the filter straight up when removing it from the WDM. Removing the filter at an angle could chip the edge of the filter glass.

5 Use vertical force to remove the optical filter to be replaced, and note the color identification and wavelength identification on the optical filter bracket.

AUTION

Risk of damage to the optical filter. Push the filter straight down when inserting it into the WDM. Inserting the filter at an angle could chip the edge of the filter glass.

- **IMPORTANT** Stop applying downward force as soon as you feel a click. This indicates that the ball-lock is seated correctly and that the filter is in the correct position. Continuing to apply downward pressure may damage the filter.
- **6** Insert the optical filter to be installed vertically into the corresponding position, taking care to align the wavelength identification with the left, and that the bracket is inserted into the bottom.
- 7 Close the WDM cap and the instrument top cover.
- **8** Turn on the Cytometer and open the software.
- **9** Select **Detector Configuration** in the Cytometer menu and create a new instrument configuration based on the settings of the new optical filter. Refer to CHAPTER 6, Verifying, Selecting, Editing, and Creating Detector Configuration. Set this new configuration as the current configuration.

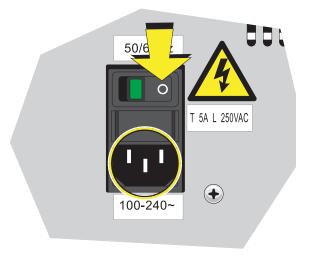

Replacing the Fuse

Use a 5 A, time delay, T 5 AL, 250 VAC fuse.

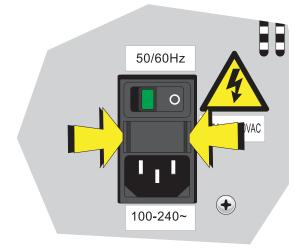

Risk of personal injury. A shock hazard exists if the power cable is connected. Turn off the Cytometer and disconnect the primary power cable before performing these procedures.

1 Turn off the Cytometer, and disconnect the power cable.

2 Press both sides of the fuse holder of the instrument inwards using a flat head screwdriver, and pull out the fuse holder.

- **IMPORTANT** Select well-performing products that comply with the specifications required, to ensure that the instrument can function normally and safely.
- **3** Check whether the fuse installed is blown, and replace the blown fuse with a new one.

The specifications of the fuse required are: T 5 AL 250 VAC, delay blow fuse, 5A, 250 VAC, 5 x 20 mm. Beckman Coulter recommends using SCHURTER 0034.3124.

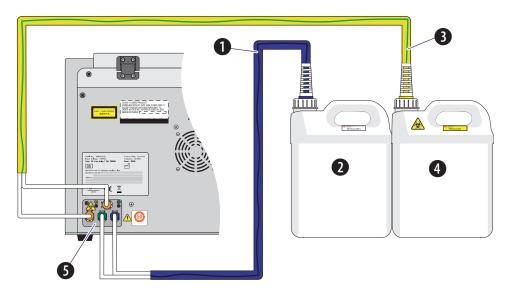

- **4** Insert the fuse holder.
- **5** Reconnect the power cable.

Replacing the Sheath Fluid Harness and/or Waste Harness

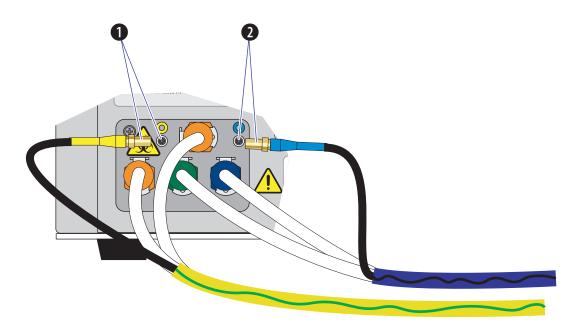

Replace the sheath fluid harness and/or the waste harness if you have a faulty sheath fluid sensor and/or waste sensor.

- 1 Confirm that the instrument is turned off or is in the standby state.
- **2** Remove sheath and/or waste pickup tubing from the appropriate container.

3 Disconnect the blue harness (1) from the sheath fluid container (2) and/or the yellow harness
(3) from the waste container (4) from the fluid connector panel (5) on the back right corner of the instrument according to the color code.

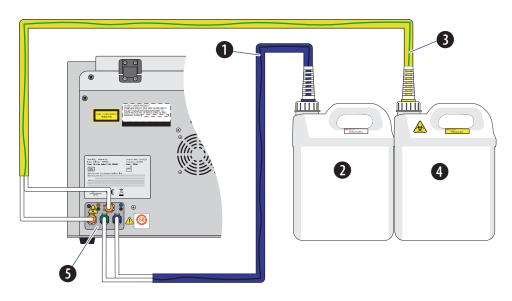

Disconnect the waste (1) and/or sheath (2) level sensors.

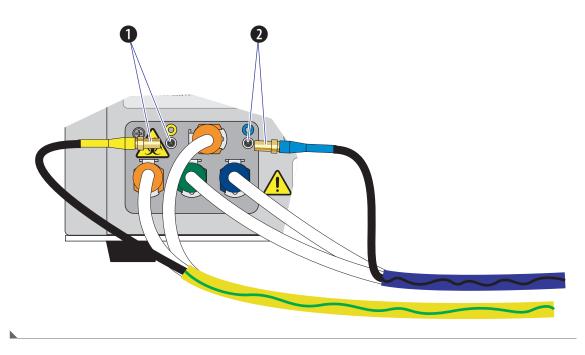

- **4** Dispose of the sheath fluid harness and/or the waste harness according to your laboratory procedures.
- **5** Insert the new sheath and/or waste pickup tubing into the appropriate container.

6 Connect the blue harness (1) from the sheath fluid container (2) and/or the yellow harness (3) from the waste container (4) to the fluid connector panel (5) on the back right corner of the instrument according to the color code.

Connect the waste (1) and/or sheath (2) level sensors.

Changing Sample Mixing and Backflush Settings

Risk of biohazardous contamination. Enabling sample mixing for 1.5 mL and 2 mL sample tubes in the semi-automatic sample injection mode can result in sample splashing. Exceeding 300 μ L sample volume when using 1.5 mL and/or 2 mL sample tubes can also result in sample splashing. Disable sample mixing in the semi-automatic sample injection mode when using 1.5 mL and 2 mL sample tubes and do not exceed 300 μ L sample volume.

The sample mixer can be enabled or disabled if necessary. The sample mixing duration can also be increased or decreased if necessary.

Whenever a sample is likely to leave residue or cause contamination, the backflush time can be increased to reduce cross contamination.

- **1** Open the CytExpert software and confirm that the instrument is connected. Refer to CHAPTER 4, Logging into the Software.
- **2** Select **Cytometer Configuration** in the Cytometer menu. The Cytometer Configuration window appears.

Cytometer Configuration	23
Backflush Duration	
Manual/Semi Automatic: 3 sec (1 ~ 600)	
Plate Loader: 3 sec (1 ~ 600)	
Semi Automatic	
✓ Sample Mixing	
Duration: 1.0 sec (0.1 ~ 5.0)	
Default OK Cano	el

3 Select the Sample Mixing checkbox to enable sample mixing.

Or

Deselect the Sample Mixing checkbox to disable sample mixing.

4 Change the sample mixing duration to the desired time.

NOTE The default setting is 1 second. Select **Default** to set the Cytometer configuration settings back to the factory default settings.

- **5** Change the backflush duration to the desired time for either the Manual/Semi-Automatic sample injection mode or the Plate Loader sample injection mode depending on the current sample injection mode selected.
 - **NOTE** The default setting is 3 seconds without the Sample Injection Mode Control Kit installed or 4 seconds **[CytoFLEX and CytoFLEX S]** or 6 seconds **[CytoFLEX LX]** with the Sample Injection Mode Control Kit installed. For **[CytoFLEX and/or CytoFLEX S]** with Sample Injection Mode Control Kit, perform an additional 6 second backflush or alternatively running daily clean after running QC.
- 6 Select OK.

Calibrating the Plate Position [With Plate Loader]

Use the following procedure to calibrate the plate position and the sample probe position:

- Upon installation
- After a new plate type is defined for first use
- After changing plate manufacturers of the same previously calibrated plate type
- When optimizing plate performance

1 Remove the front cover. Refer to CHAPTER 12, Front Cover Removal and Reinstallation.

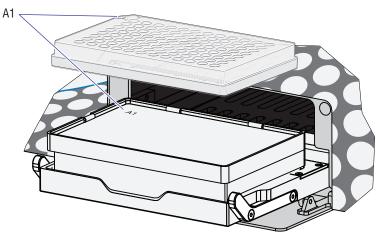

2 Select U Standby

3 Select **Plate Type Library** in the Advanced menu. The plate loader automatically ejects the plate holder stage and the Plate Type Library window appears.

Active	Name	Plate Mode	Last Calibration Time	Default
1	96-well flat-bottom	Standard	-	0
\checkmark	96-well V-bottom	Standard	-	0
\checkmark	96-well U-bottom	Standard	-	0
\checkmark	96-well deep well	Deep Well	-	0

NOTE The 96-well deep well plate is only available for use if the Plate Loader DW is installed.

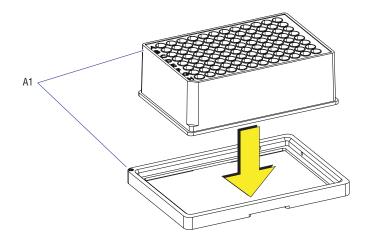

[Standard 96-Well Plate]: Proceed to Step 4. [96-Well Deep Well Plate]: Skip to Step 5. **4 [Standard 96-Well Plate]**: Select the plate type and place the plate on the plate holder. Skip to Step 11.

[Standard 96-Well Plate in the Plate Holder (Plate Loader DW -With groove)]

NOTE Ensure plate well A1 aligns with position A1.

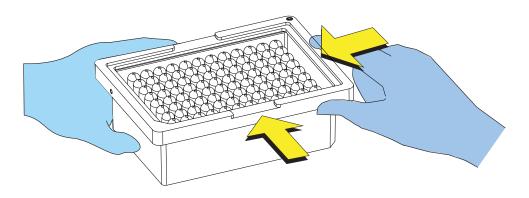

- **5 [96-Well Deep Well Plate]**: Select the 96-Well Deep Well plate type.
- **6 [96-Well Deep Well Plate]**: Place a 96-well deep well plate into the calibration frame.

NOTE Ensure plate well A1 aligns with position A1.

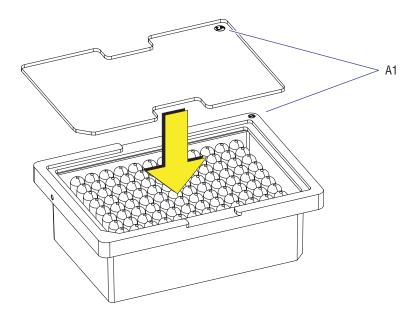

NOTE The calibration frame and the transparent plate are used to assist the calibration in X-axis and Y-axis. They are delivered together with the Plate Loader DW.

7 [96-Well Deep Well Plate]: Turn the calibration frame together with the deep well plate upside down. Push the right corner of the frame into place against the lower right corner of the plate.

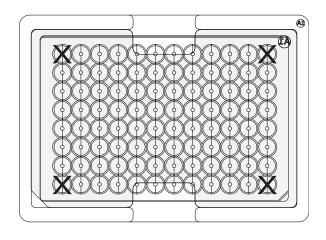

NOTE Ensure the deep well plate is correctly placed into the calibration frame.

8 [96-Well Deep Well Plate]: Place the transparent plate on the frame.

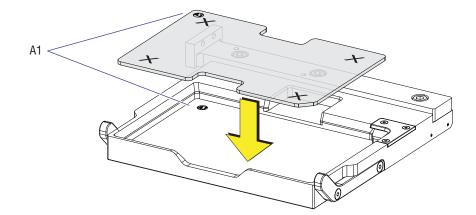

NOTE Ensure the A1 of the transparent plate aligns with position well A1.

9 [96-Well Deep Well Plate Shown]: Mark the center position of well A1, A12, H1, H12 on the transparent plate.

10 [96-Well Deep Well Plate]: Place the transparent plate on the plate holder stage.

NOTE Ensure plate well A1 aligns with position A1.

 $11 \ \ \text{Select } \textbf{Edit} \ \text{to access the calibrate icon. The Edit Plate Type window appears.}$

[Standard 96-Well Plate]

Edit Plate Type		83			
Name:	96-well V-bottom

[96-Well Deep Well Plate]

Edit Plate Type			23
Name:	96-well deep wel	I	
Plate Mode:	Deep Well	-	
✓ Mix:	10 sec		
Remarks:			
			-
			•
Last Calibration Tim	e: -		
Calibrate		ОК	Cancel

NOTE You can access the calibrate icon by either adding a plate or duplicating a plate. Refer to CHAPTER 2, Plate Type Library.

12 Set the Mix settings.

13 Select **Calibrate**. The message *Please confirm that the plate is placed properly and Press Ok.* appears. Select **OK**. The plate loader loads the plate holder stage and the sample probe moves to the sample aspiration position of well A1.

[Standard 96-Well Plate]: Proceed to Step 14.

[96-Well Deep Well Plate]: Skip to Step 15.

Risk of instrument damage. Do not crash the probe into the bottom of the plate as this will cause irreparable damage to the probe. Move the probe one step at a time when lowering the probe on the Z-axis toward the bottom of the plate. You will hear a click when the probe makes contact with the bottom of the well, this is the extreme position for the Z-axis of the probe. Do not move the probe any lower after you hear the click.

14 [Standard 96-Well Plate]: Select and or and to adjust the sample probe positions in the X-, Y-, and Z-axes.

Ensure the sample probe is centered and touches the bottom of the well.

NOTE The sample probe should just make contact with the bottom of the well.

NOTE The X-axis arrows moves the sample probe well position left and right. The Y-axis arrows moves the sample probe well position forward and back. The Z-axis arrows moves the sample probe up and down.

Skip to Step 16.

15 [96-Well Deep Well Plate]: Select **A** and **v** or **A** and **b** to adjust the sample probe positions in the X- and Y-axes.

Ensure the sample probe is centered on the mark of transparent plate.

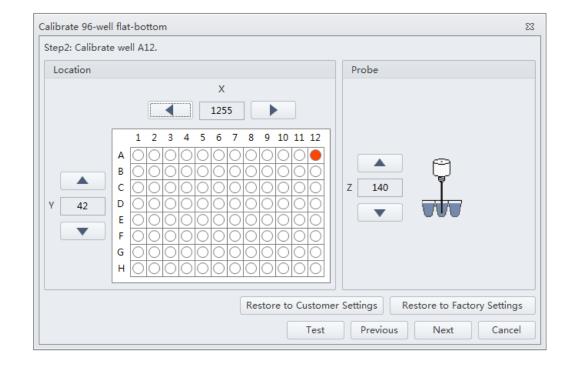

NOTE The X-axis arrows moves the sample probe well position left and right. The Y-axis arrows moves the sample probe well position forward and back. The Z-axis arrows moves the sample probe up and down.

16 Select **Test** to verify the sample probe position.

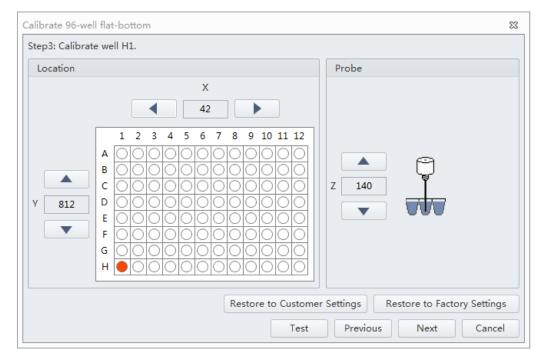

Listen for the click to ensure the probe has made contact with the bottom of the well. Readjust the sample probe position by moving the probe 3 steps up. This is the correct position for the Z-axis of the probe.

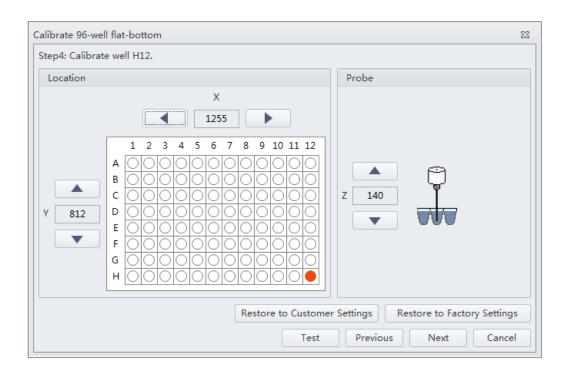

NOTE [Transparent Plate]: The sample probe cannot come in contact with the surface of the transparent plate in the Z-axis. This is normal. Do not adjust the sample probe positions in the X-axis. The probe position in the Z-axis will be calibrated using a deep well plate.

17 Select **Next** to move to the next well.

18 Repeat Steps 14-17 for wells A12, H1, and H12.

19 Select **Next**. The calibration completion window appears.

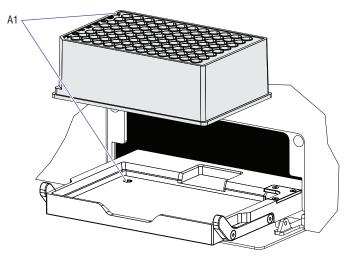

Calibrate Plate 1	23		
Step 5: Calibration completed.			
Click on the "Finish" button to save the data and exit, or click on the "Cancel" button to discard the data.			
Previous Finish Cance	el		

20 [Standard 96-Well Plate]: Select Finish to save the settings and exit. Skip to Step 30.

[96-Well Deep Well Plate]: Select **Finish** to save the settings and exit. Continue to calibrate the probe position of Z-axis for the deep well plate. Proceed to Step 21.

- **21 [96-Well Deep Well Plate]**: Remove the transparent plate from the plate holder stage.
- **22 [96-Well Deep Well Plate]**: Select the plate type which has already been calibrated on the X-axis and Y-axis above on the Plate Type Library window, and place the deep well plate on the plate holder stage.

[96-Well Deep Well Plate]

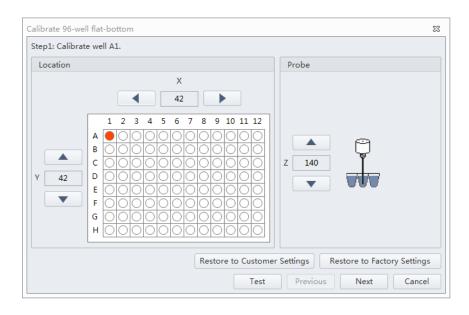

NOTE Ensure plate well A1 aligns with position A1.

23 [96-Well Deep Well Plate]: Select **Edit** to access the calibrate icon again. The Edit plate window appears.

Edit Plate Type		23		
Name:	96-well deep well			
Plate Mode:	Deep Well 👻			
Mix:	10 sec			
Remarks:				
		^		
		-		
Last Calibration Time: -				
Calibrate	ОК	Cancel		

24 Select Calibrate. The message Please confirm that the plate is placed properly and Press Ok. appears. Select OK. The plate loader loads the plate holder stage and the sample probe moves to the sample aspiration position of well A1.

Risk of instrument damage. Do not crash the probe into the bottom of the plate as this will cause irreparable damage to the probe. Move the probe one step at a time when lowering the probe on the Z-axis toward the bottom of the plate. You will hear a click when the probe makes contact with the bottom of the well, this is the extreme position for the Z-axis of the probe. Do not move the probe any lower after you hear the click.

25 [96-well Deep Well Plate]: Select **and** to adjust the sample probe positions in the Z-axis.

Ensure the sample probe is centered and touches the bottom of the well.

NOTE The sample probe should just make contact with the bottom of the well.

- **NOTE** The probe positions of X-axis and Y-axis have already been calibrated on the transparent plate. Do not continue to adjust the sample probe positions in X-axis and Y-axis.
- **26** [Deep-96 Well Plate]: Select Test to verify the sample probe position.

Listen for the click to ensure the probe has made contact with the bottom of the well. Readjust the sample probe position by moving the probe 3 steps upper. This is the correct position for the Z-axis of the probe.

27 [96-Well Deep Well Plate]: Select Next to move to the next well.

28 [96-Well Deep Well Plate]: Repeat Steps 25-27 for wells A12, H1, and H12.

29 [96-Well Deep Well Plate]: Select Finish to save the settings and exit.

30 Reinstall the front cover. Refer to CHAPTER 12, Front Cover Removal and Reinstallation.

APPENDIX A Instrument Installation

Overview

[CytoFLEX]: Your instrument may have been shipped directly to your laboratory, in which case you will need to set up and connect the Cytometer and the Workstation. Refer to this chapter for the instrument installation procedure.

[CytoFLEX LX]: The CytoFLEX LX is installed by your Beckman Coulter Service Representative. Do not open the box or crate. Wait for a qualified Beckman Coulter Service Representative.

This chapter contains information on:

- Instrument Transportation and Storage
- Installation Environment Validation
- Unpacking the Instrument and Inspecting the Materials for Defects or Omissions [CytoFLEX]
- CytExpert Software Installation Options
- Installing the Software [CytoFLEX Platform]
- Upgrading the CytExpert Software
- Reinstalling the CytExpert Software

Instrument Transportation and Storage

Refer to CHAPTER 11, Preparing the Instrument for Transport or Storage, prior to transportation or storage.

Attention to the following items is required when transporting or storing the instrument:

- Take caution to protect the instrument from exposure to rain or sunlight.
- Always place the instrument on a flat, stable surface, and take note of the symbol for *this side up*.
- Temperature range: see Temperature and Humidity.
- To prevent extrusion, the load on top cannot exceed 100 kg.
- CytoFLEX Cytometer net weight 23 kg, gross weight 27 kg; transport the instrument using only appropriate equipment so as to guard against personal injury.
- CytoFLEX LX Cytometer net weight 83 kg, gross weight 103 kg; transport the instrument using only appropriate equipment so as to guard against personal injury.

Installation Environment Validation

IMPORTANT This instrument is intended for indoor use only.

Verify whether the installation environment satisfies the following requirements:

Worktable

Risk of instrument damage. Place the instrument on a level surface. Failing to do so places the system is in danger of toppling and can result in damage. Take all necessary precautions throughout the process of storing or transporting the instrument.

- The tabletop must be smooth and level.
- Minimum tabletop load bearing capacity [CytoFLEX]: 50 kg.
- Minimum tabletop load bearing capacity [CytoFLEX LX]: 100 kg.
- The tabletop must not vibrate or shake.
- Minimum tabletop dimensions [CytoFLEX]: 120 cm x 80 cm; minimum vertical space above tabletop: 80 cm.
- Minimum tabletop dimensions [CytoFLEX LX]: 200 cm x 80 cm; minimum vertical space above tabletop: 100 cm.
- Position the instrument in such a manner that it will facilitate disconnection of the power cable at the instrument end.

Ventilation and Cleaning

- **IMPORTANT** If necessary, use ventilation equipment, but airflow must not be allowed to blow directly on the system, as it can affect the reliability of the data.
- Ensure that the working environment is well ventilated for proper heat dissipation.
- Maintain a clearance of at least 20 cm from the back of the instrument for heat dissipation.
- Keep the environment as dust free as possible.
- Avoid direct exposure to sunlight.
- Avoid placing near heat sources or exposing to drafts.
- Avoid corrosives or flammable gases.

Power Source

A DANGER

Risk of electric shock and/or instrument damage. Ensure that the power source is properly grounded. Improper grounding can cause electric shock and damage the system. Verify that the output voltage of the power outlet conforms to the system requirements and that a 5 A, time delay, T 5 AL 250 VAC fuse is installed. To prevent personal injury, Beckman Coulter recommends using a power source designed to protect against electrical shock.

Possible instrument damage could occur if you use an extension cord or a power strip to connect the Cytometer. Always plug the Cytometer into a dedicated outlet with an isolated ground.

The power source requirements are as follows:

- This instrument has been tested to and meets all applicable requirements for CE Marking.
- This instrument complies with the emission and immunity requirements described in IEC 61326-1.
- This equipment has been designated and tested to CISPR 11 Class A. In a domestic environment it may cause radio interference, in which case, you may need to take measures to mitigate the interference.
- It is advised that the electromagnetic environment should be evaluated prior to operation of the device.
- Do not use this device in close proximity to sources of strong electromagnetic radiation (unshielded intentional RF sources), as these may interfere with the proper operation.
- 100-240 volts, 50/60 Hz, 3-wire power cable, well grounded.
- Amperage not less than 10 A.
- The system requires a well-grounded power outlet (150 VA normal, 250 VA max) to provide the necessary power.
- Distance from system to socket less than 1.5 m.

Power consumption of the Plate Loader is <30 W.

Temperature and Humidity

Risk of instrument damage and/or erroneous results. To ensure reliability, the system must be operated in the specified environment, within the required temperature and humidity ranges. If the ambient temperature or humidity level falls outside the ranges mentioned above, use appropriate air conditioning.

- **CytoFLEX:** Ambient temperature: 15-27°C with fluctuations of no more than <±2°C per hour.
- **CytoFLEX LX:** Ambient temperature: 15-30°C with fluctuations of no more than <±2°C per hour.
- Relative humidity: 15% RH-80% RH, non-condensing.

Waste Disposal

Risk of biohazardous contamination if you have skin contact with the waste container, its contents, and its associated tubing. The waste container and its associated tubing might contain residual biological material and must be handled with care. Clean up spills immediately. Dispose of the contents of the waste container in accordance with your local regulations and acceptable laboratory procedures.

The waste line from the Cytometer is connected to a waste container/cubitainer. Dispose of the system's waste in accordance with your local regulations and acceptable laboratory procedures.

The waste line supplied with the instrument can be connected to an open drain. If you use an open drain, mechanically secure the waste tube into the drain so the tube cannot accidentally come out of the drain. This prevents spillage.

Unpacking the Instrument and Inspecting the Materials for Defects or Omissions [CytoFLEX]

Take care to store the instrument in a suitable environment where it can remain in the proper position.

Check that the following components on the packing list are present:

- Cytometer
- Cables
- Computer

- Mouse
- Keyboard
- Monitor
- Fluid Container holder [CytoFLEX]
- Sheath fluid container
- Waste container
- Sheath fluid tubing
- Waste tubing
- USB configuration key
- Software USB

Installing the Instrument and Connecting the Equipment [CytoFLEX]

IMPORTANT Use the appropriate power cable plug for your geographic region.

Risk of erroneous results. Place the Fluid Containers and the instrument on the same, level surface. An excessive difference in height can alter the flow velocity.

Possible instrument damage could occur if you use an extension cord or a power strip to connect the Cytometer. Always plug the Cytometer into a dedicated outlet with an isolated ground.

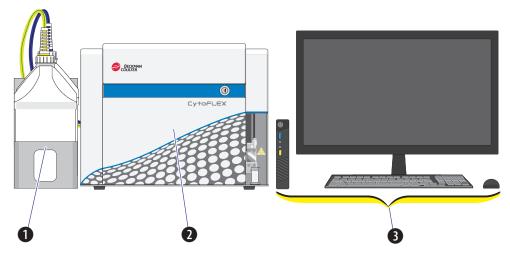

1 Remove the Cytometer, the Fluid Containers, the accompanying holder, the computer, the monitor, and the keyboard and mouse from each respective box placing them flat on the instrument worktable.

NOTE The Fluid Container holder must be on the same plane as the Cytometer.

Reach under the base of the instrument to lift the Cytometer out of the package. Beckman Coulter recommends that two people lift the Cytometer out together.

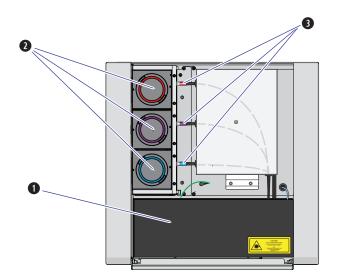

2 Ensure a minimum clearance of 20 cm on both sides and to the back of the Cytometer to maintain enough room to access the on/off controls for the Cytometer devices.

3 After removing the monitor and attaching the base, place them on the worktable with the computer.

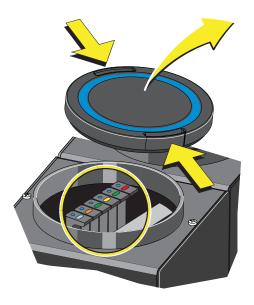

[CytoFLEX Without Plate Loader Shown]

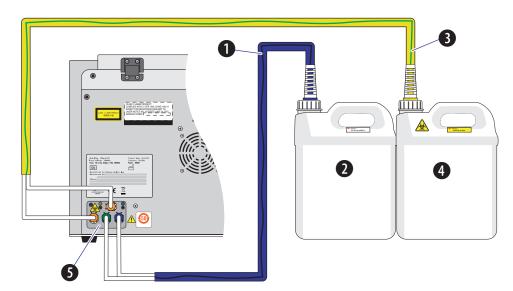

- 1. Fluid Containers. Place on the left side of the Cytometer.
- 2. Cytometer. Place between the Fluid Containers and the Workstation.
- **3.** Workstation. Place on the right side of the Cytometer.
- 4 Open the top cover of the Cytometer. Check inside to verify that the optical bench cover (1) is tightly closed and that the optical fibers (3) and WDMs (2) are securely connected.

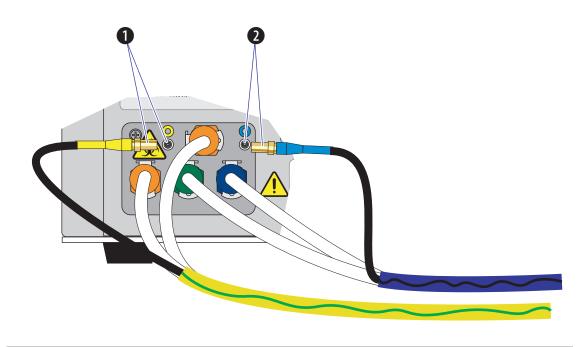

5 Remove any shipping tape and open the cap of each WDM. Verify that the light filters inside are in place.

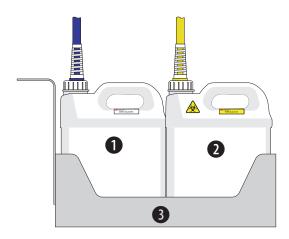

- **6** Insert sheath and waste pickup tubing into the appropriate container.
- 7 Connect the blue harness (1) from the sheath fluid container (2) and the yellow harness (3) from the waste container (4) to the fluid connector panel (5) on the back right corner of the Cytometer according to the color code.

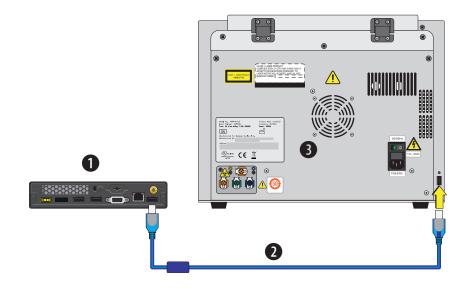

8 Connect the waste (1) and sheath (2) level sensors.

9 Place the sheath fluid container (1) and the waste container (2) in the Fluid Container holder (3).

10 Set up the supplied computer (1) and connect the USB cable (2) from the back of the Cytometer (3) to a USB port on the back of the computer.

 $11 \ \ {\rm Plug} \ {\rm the} \ {\rm Cytometer} \ {\rm power} \ {\rm cable} \ {\rm into} \ {\rm the} \ {\rm back} \ {\rm of} \ {\rm the} \ {\rm Cytometer}.$

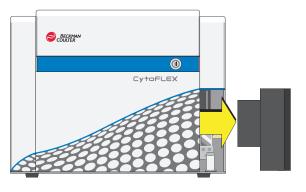

12 Connect the computer keyboard, mouse, and monitor.

A

13 Remove the foam support from the instrument.

[CytoFLEX Without Plate Loader Shown]

- **14** Add Deep Clean solution to the Deep Clean solution bottle. Refer to Step 1 and Steps 3 7 of the CHAPTER 12, Adding the Deep Clean Solution.
- **15** Clean the sheath fluid container. Refer to CHAPTER 11, Cleaning the 4 L Sheath Fluid Container.
- **16** Fill the Sheath fluid container. Refer to CHAPTER 12, Filling the 4 L Sheath Fluid Container.

🕂 WARNING

Risk of chemical injury from bleach. To avoid contact with the bleach, use barrier protection, including protective eyewear, gloves, and suitable laboratory attire. Refer to the Safety Data Sheet for details about chemical exposure before using the chemical.

- **17** Add 400 mL of high-quality, fragrance-free, gel-free bleach (5 to 6% solution of sodium hypochlorite available chlorine) to the waste container.
- **18** Install the CytExpert software. Refer to Installing the Software [CytoFLEX Platform].
- **19** Turn on the instrument. Refer to CHAPTER 4, Turning On the Instrument.
- **20** Open the CytExpert software. Refer to CHAPTER 4, Logging into the Software.
- **21** Run the System Startup Program. Refer to CHAPTER 4, Running the System Startup Program [with the Single Tube Loader].

- **22** Prime the instrument three times. Refer to CHAPTER 12, Priming the Flow Cell.
- **23** Prepare a QC sample. Refer to CHAPTER 5, Preparing the QC Sample.
- **24** Import the lot-specific target values files. Refer to CHAPTER 5, Importing Lot-Specific Target Values.
- **25** Perform a QC to establish the target gain values for your instrument. Refer to CHAPTER 5, Collecting QC Data.
- **26** If the lot number is new and QC fails, the following software message appears. Select **Yes**.

Confirm	
QC failed, do you want to save the adjusted gain as bead gain for the current batch and QC Gai	in?
Yes No	

- **NOTE** Target gain values must be established for each new lot number of CytoFLEX QC Fluorospheres. QC could fail up to 3 times upon running each new lot number for the first time until target gain values are established.
- ${\bf 27}\,$ Repeat Steps 23-26 until the target gain values are established and QC has passed.

NOTE If QC fails more than three times, contact us.

28 Within five business days, activate your Warranty by contacting us and providing them with your latest QC run results.

Installing the Instrument and Connecting the Equipment [CytoFLEX LX]

The CytoFLEX LX is installed by Beckman Coulter service.

CytExpert Software Installation Options

- CytExpert Default software option. User Login is not required to run the system.
- **CytExpert User Management software option.** User Login is required to run the system. Contains features and functionality that facilitates user and role management.
- **CytExpert Electronic Record Management software option.** User Login is required to run the system. Contains features and functionality that facilitates compliance with 21 CFR Part 11 guidelines for Electronic Records and Signatures.

Installing the Software [CytoFLEX Platform]

The installation process workflow is as follows:

The CytExpert software can be installed on any computer that meets the minimum specifications (see CHAPTER 1, Instrument Specifications) for analysis-only use.

Required Materials

The following materials are required to install the CytExpert software:

- CytoFLEX platform flow cytometer.
- Workstation.
- CytExpert software installation USB.
- Authorized Beckman Coulter CytoFLEX USB configuration key.

Installing the CytExpert Software

IMPORTANT Follow this procedure when installing the CytExpert software for the first time.

- 1 Ensure the workstation and the monitor are powered on.
- **2** Insert the software USB into the computer.

NOTE If the Autoplay window appears, select Open folder to view files.

3 Select **CytExpert_Setup_X.X.exe**. The User Account Control window appears.

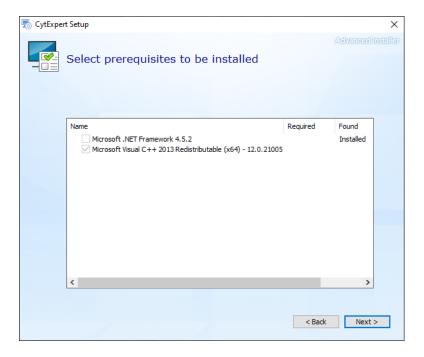

4 Select **Yes**. The CytExpert Setup Welcome window appears.

5 Select Next.

24 Select **Close** to finish the CytExpert software installation.

25 Install the instrument configuration file. Refer to Installing the Instrument Configuration File.

Installing the Instrument Configuration File

Risk of erroneous results or instrument damage. Only install the configuration file that matches your instrument. Installing an incorrect configuration file could cause erroneous results or instrument damage.

Use this procedure to install the configuration settings for the instrument. If the CytExpert software will not be connected to a Cytometer, this step can be skipped.

IMPORTANT You must install the CytExpert software before installing the instrument configuration file. Refer to Installing the Software [CytoFLEX Platform].

1 Select and run **CytExpert_X.X_Config_Setup_XXXX.exe**. The User Account Control window appears.

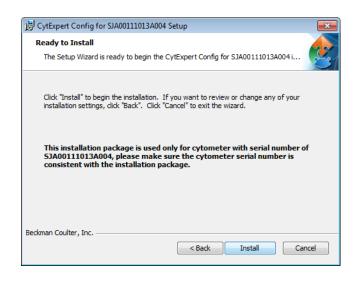

NOTE XXXX refers to the serial number of the instrument.

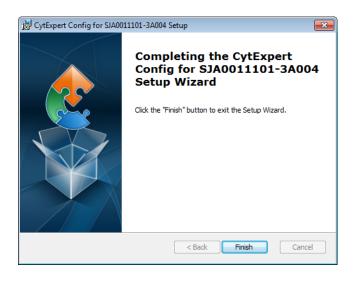

2 Select **Yes**. The CytExpert Config Welcome window appears.

3 Select **Next**. The CytExpert Config Ready to Install window appears.

- **4** Verify that the serial name displayed at the top of the window is correct.
- **5** Select **Install**. When the installation has finished, the Completing the CytExpert Config Setup Wizard window appears.

6 Select Finish.

7 If you get the following message, select **OK**. When you launch CytExpert, the system will automatically upgrade your configuration file.

Starting the Software

IMPORTANT The default username is *admin*. The default password is *password*.

- 1 Insert the USB configuration key into the USB port of the computer.
- 2 Start the software. Refer to CHAPTER 4, Logging into the Software, for detailed instructions on opening the software and confirming the connection status.

NOTE If the software shows *Connected*, data collection and analysis can be completed.

Upgrading the CytExpert Software

Use this procedure to upgrade to software version 2.0 or higher from any previous version.

If you only need to upgrade to the CytExpert Default software option, you should follow the procedure below.

If you need to install either the CytExpert User Management software option or the CytExpert Electronic Record Management software option, you should first follow the procedure below then follow the reinstallation procedure. Refer to Reinstalling the CytExpert Software.

Refer to CytExpert Software Installation Options for the differences between each software option available.

A CAUTION

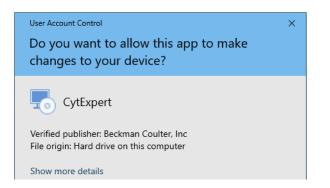

Risk of data loss. Reinstalling the CytExpert Software could overwrite your database. Ensure you backup your database prior to software reinstallation.

1 Insert the software USB into the computer.

NOTE If the Autoplay window appears, select Open folder to view files.

🚶 AutoPlay 📃 📼 🗮 🍋

		Second Co.

12 Select **Close** to finish the CytExpert software installation.

Reinstalling the CytExpert Software

Use this procedure to:

• Change the software option installed in all software versions 2.0 and higher. Refer to CytExpert Software Installation Options for the differences between each software option available.

NOTE If you are upgrading to software version 2.0 or higher from any software version prior to software version 2.0, refer to Upgrading the CytExpert Software.

- Reinstall the same version of software.
- Upgrade your software to a version newer than software version 2.0.

Risk of data loss. Reinstalling the CytExpert Software could overwrite your database. Ensure you backup your database prior to software reinstallation.

- **1** Backup your CytExpert data if you previously had a software option other than the Default software option installed. Refer to CHAPTER 10, Backup and Restore.
- **2** Insert the software USB into the computer.

NOTE If the Autoplay window appears, select Open folder to view files.

3 Select **CytExpert_X.X_Setup.exe**. The User Account Control window appears.

4 Select **Yes**. The Welcome to CytExpert Setup Wizard window appears.

5 Select **Next**. The Change your installation of CytExpert screen appears.

6 Select **Remove**. The Begin Remove of CytExpert screen appears.

CytExpert Electronic Record Management

Overview

IMPORTANT You must have the CytExpert Electronic Record Management software option installed to use the features listed below. Refer to APPENDIX A, CytExpert Software Installation Options.

Beckman Coulter's CytoFLEX with CytExpert software version 2.0 and higher contains features and functionality that facilitates compliance with 21 CFR Part 11 guidelines for Electronic Records and Signatures. This electronic record management includes controls for user identification, permissions, electronic signatures, data integrity, operation and experiment logs and audit trails. CytExpert software version 2.0 and higher contains a database that uses checksum matching to prevent tampering of the records and files that are indexed in the Closed File System.

This chapter contains information on:

- Software Menu
- Experiment Management
- Log
- Electronic Signature
- User Management

Software Menu

The CytExpert Electronic Record Management software option includes additional software menu items that are not available in the CytExpert Default software option or the CytExpert User Management software option. Refer to Figure 2.3 and Figure 2.4 for comprehensive software menu trees and details on which menu item applies to each software option.

Experiment Management

CAUTION

Risk of file corruption. Do not add, delete, or modify data from the Windows Explorer directory. Manage all data changes using Experiment Explorer to ensure file indexing remains intact.

Closed File System

The closed file system provides audit trail capability for CytExpert experiment files. The closed file system provides a secure layer between the actual Windows Explorer files and the CytExpert users to retain file integrity.

Three file types are managed by the closed file system:

- Experiment files
- Compensation experiment files
- Experiment template files

The Experiment Explorer dialog can be accessed by selecting **File > Experiment Explorer**. The Experiment Explorer dialog functions similarly to Windows Explorer.

/orkspace								Enter text to search

	4								

Experiments, compensation experiments, and experiment templates created in other modes can be imported into the closed file system. These closed file system experiments can also be exported. Refer to Importing an Experiment/Template and Exporting an Experiment/Template.

Experiment Directory Management

When launching CytExpert for the first time after installing the software, the Administrator must set up at least one experiment directory for experiment files.

NOTE Only one experiment directory can be created per drive.

Setting Up the Experiment Directory

1 Select Settings > Set Experiment Directory. The Set Experiment Directory window appears.

Set Experi	mer	nt Directory	_	5	۰	23
Nan	ie	Path	Free Sp	bace	е	
		·				
		Add Rename Dele	te	(Close	

2 Select **Add**. The Add New Experiment Directory window appears.

Add New	Experiment Directory	23
Name:		
Path:		
	ОК Салс	el

- **3** Enter a name for the experiment directory.
- **4** Select _____ and browse to the desired Windows file system folder.

5 Select **OK**. The specified folder appears in the Set Experiment Directory window.

	Name	Path Free S	pace	
B	Kelly	C:\CytoFLEX-S_AS24001_Data 411.68	GB free	•
	TechSupport	D:\CytoFlex Data 12.04	GB free	

NOTE Select **Rename** to rename the experiment directory. Select **Delete** to delete an experiment directory.

Folder Hierarchy Management

Select **File > Experiment Explorer** to view Experiment Explorer. Select **New Folder** from the right-click drop down menu or from the Experiment Explorer toolbar to create a new subfolder.

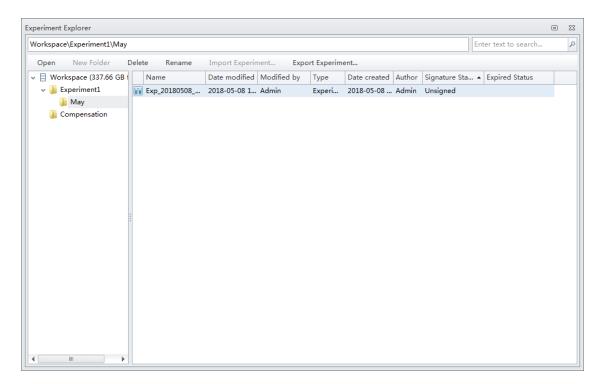

· · · · · · · · · · · · · · · · · · ·	periment1								Enter text to	search

b. Browse to the desired file path for export and select **OK**.

A progress bar appears when exporting files.

5 vi 5 20100500 1 iv	2204 51 11
Exporting Exp_20180509_1.xit	33% Finishe

Once the export is complete, the exported file displays in the target folder.

Log

The CytExpert Electronic Record Management software option includes three logs:

Experiment Operation Log — The experiment operation log lists the audit trail records related to the experiment operations based on query criteria.

System Operation Log — The system operation log lists the log records associated with the system configuration changes based on query criteria.

User Management Operation Log — The user management operation log lists all of the log records related to the user management operations based on query criteria.

NOTE All three logs support print and export to PDF or CSV file functions.

Experiment Operation Log

The Experiment Operation Log generates an experiment audit trail record when performing experiment operations.

Select **Log** > **Experiment Operation Log** to open the Experiment Operation Log window. Refer to Figure B.1.

Rejecting Experiment

1 Select Signature > Reject.

Reject		23
Username:	Admin	
Password:		
Comment:		
	OK	əl

NOTE You cannot reject an experiment if it has been validated.

2 If necessary, enter comments related to the experiment.

3 Select **OK**. The following message appears: *Are you sure you want to reject the signature?*

4 Select **Yes** to confirm the rejection of your signature or **No** to cancel.

Setting the Signature Retention Period

The signature retention period becomes effective immediately once an experiment has been signed. The experiment cannot be deleted or edited within the retention period.

Select **Settings > Set Retention Period** to set the signature retention period for an experiment.

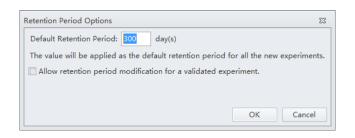

Set	Retention Period	23
Re	etention Period: 300 day(s)	
Th	e retention period starts from the first signature of the experiment.	
	OK Cancel	

NOTE The default signature retention period is 300 days. The allowable range is 1-9999 days.

Select **Settings > Set Retention Period** to navigate to the Experiment Explorer window to set the signature retention period for multiple experiments.

Select **Settings > Retention Period Options** to default signature retention period for experiments.

NOTE Select **Allow retention period modification for a validated experiment** to allow modifying the signature retention period for a validated experiment.

Signature Setting

The Signature Setting allows you to set the signature hierarchy, the signature name, and the maximum signature count for each signature level.

1 Select **Signature > Signature Setting**. The Signature Setting window appears.

Si	gnature Setting			8	2		
	Signatures		Signat	ure Details			
	Signature Level	Signature Name	Name:	Analysis			
	1	Analysis	Maxim	um Signature Count: 1			
		Review					
	3	Approval		ignature for roles: istrator			
	Move Up N	Move Down					
				Add Edit Delete Close			

NOTE You can add a maximum of 3 signature levels.

2 Select the signature name to be edited from the Signatures section of the Signature Setting window. Then, select **Edit**. The Edit Signature window appears.

Edit Signature	23
Name: Analysis	
Maximum Signature Count: 1	
Allow signature for roles:	
Administrator	
Role 1	
The role without permission of "Sign/Reject" is not displayed in above list.	×
OK Cancel	

- **3** Enter the signature name.
- **4** Select the desired Maximum Signature Count.
 - **NOTE** The signature count means the allowable number of signatures for the signature name. You can choose between 1 and 10. The default value is 1.

5 Select a role for the signature from the *Allow signature for roles* section of the Edit Signature window.

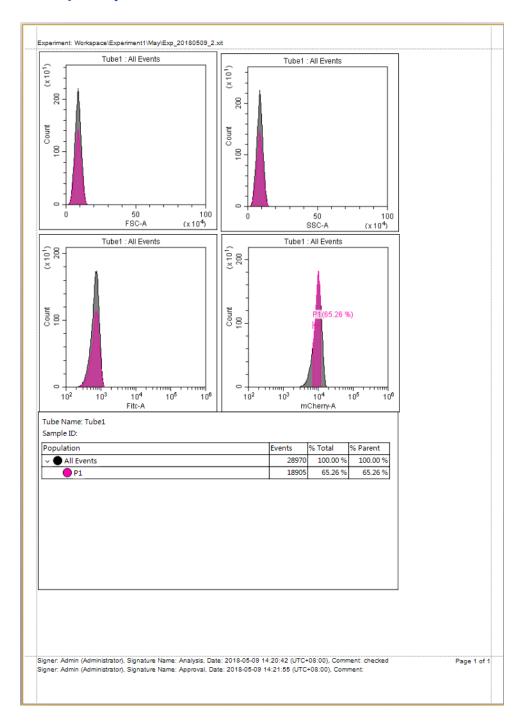

Edit Sign	ature	23
Name:	Analysis1	
Maximu	m Signature Count: 3	
Allow si	gnature for roles:	
	ninistrator	
Role	• 1	
The rol	e without permission of "Sign/Reject" is not displayed	х
	OK Cancel	

- **NOTE** Each role can sign or reject only if the sign/reject permission is assigned and the role signature is selected. The available roles displayed in the window depend on the permission setting assigned in Role Manager. To assign sign/reject permissions to a role, refer to CHAPTER 2, Modifying User Roles in the Role Window.
- **6** Select **Ο***K*.
- 7 Select Close.

Printing an Experiment Signature

IMPORTANT Ensure an experiment is signed prior to attempting to print the experiment signature.

To print an experiment with a signature, refer to Printing Graphics in CHAPTER 6, Data Acquisition and Sample Analysis.

User Management

User Administration

Logging In and Out of the Software

Refer to Logging into the Software and Logging Out of the Software in CHAPTER 4, Daily Startup.

Locking the Account

Refer to Locking the Account in CHAPTER 4, Daily Startup.

Role Management

Refer to Role Management in CHAPTER 2, Using the CytExpert Software.

User Management

Refer to User Management in CHAPTER 2, Using the CytExpert Software.

Account Policies

Refer to Account Policies in CHAPTER 2, Using the CytExpert Software.

APPENDIX C Sample Injection Mode Control Kit

Overview

The Sample Injection Mode Control Kit is a mechanical knob installed by your service engineer that enables users to switch between the Plate Loader sample injection mode and the Semi-Automatic or manual sample injection mode. The switch eliminates the need to manually re-route the tubing.

This chapter contains information on:

- Performance Characteristics [With the Sample Injection Mode Control Knob]
- Sample Injection Mode Control Kit Components
- Switching the Sample Probe from the Single Tube Sample Station to the Plate Loader [With Sample Injection Mode Control Knob]
- Switching the Sample Probe from the Plate Loader to the Single Tube Sample Station [With Sample Injection Mode Control Knob]

Performance Characteristics [With the Sample Injection Mode Control Knob]

Performance [CytoFLEX or CytoFLEX S With Standard Plate Loader]							
Throughput [With	10 second acquisition without mixing or backflush: <35 min.						
Standard Plate Loader] ^a	10 second acquisition with 3 second mixing and 4 second backflush: <50 min.						

a. This performance characteristic is different if you do not have the Sample Injection Mode Control Kit installed on your CytoFLEX flow cytometer. Refer to CHAPTER 1, Performance Characteristics.

Performance [CytoFLEX or CytoFLEX S With Plate Loader DW]				
Carryover	Plate Loader format	≤1.0%		
Throughput [With Plate Loader DW] ^a	Standard 96-well plate, 10 second acquisition without mixing or backflush: <36 min.			
	96-well deep well plate, 10 second acquisition without mixing or backflush: <37 min.			
	Standard 96-well plate, 10 second acquisition with 5 second mixing and 4 second backflush: <54 min.			
	96-well deep well plate, 10 second acquisition with 10 second mixing and 4 second backflush: <64 min.			

a. The Plate Loader DW is equipped with the Sample Injection Mode Control Kit. Refer to APPENDIX C, Sample Injection Mode Control Kit.

Performance [CytoFLEX LX With Standard Plate Loader]		
Throughput [With Standard Plate Loader] ^a	10 second acquisition without mixing or backflush: <38 min.	
	10 second acquisition with 3 second mixing and 6 second backflush: < 56 min.	

a. This performance characteristic is different if you do not have the Sample Injection Mode Control Kit installed on your CytoFLEX LX flow cytometer. Refer to CHAPTER 1, Performance Characteristics.

Performance [CytoFLEX LX With Plate Loader DW]				
Carryover	Plate Loader format	≤1.0%		
Throughput [With Plate Loader DW] ^a	Standard 96-well plate, 10 second acquisition without mixing or backflush: <39 min.			
	96-well deep-well plate, 10 second acquisition without mixing or backflush: <40 min.			
	Standard 96-well plate, 5 second acquisition with 6 second mixing and 4 second backflush: <60 min.			
	96-well deep well plate, 10 second acquisition with 6 second mixing and 4 second backflush: <69 min.			

a. The Plate Loader DW is equipped with the Sample Injection Mode Control Kit. Refer to APPENDIX C, Sample Injection Mode Control Kit.

Sample Injection Mode Control Kit Components

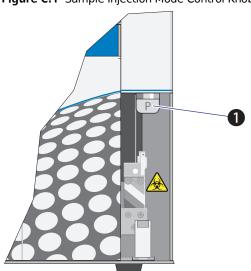

Figure C.1 Sample Injection Mode Control Knob

- 1. Switch module knob
 - **NOTE** The **P** indicates the instrument is set to Plate Loader sample injection mode. The **T** indicates the instrument is set to the Semi-Automatic or manual sample injection mode.

Switching the Sample Probe from the Single Tube Sample Station to the Plate Loader [With Sample Injection Mode Control Knob]

Risk of biohazardous contamination if you have skin contact with the sample probe or the sample peristaltic pump tubing. The sample probe and the sample peristaltic pump tubing could contain residual biological material and must be handled with care. Clean up spills immediately.

Use universal precautions when working with pathogenic materials. Means must be available to decontaminate the instrument and to dispose of biohazardous waste.

Risk of biohazardous contamination and/or sample dilution when performing a manual backflush. If the CytExpert Sample Injection Mode does not match the Sample Injection Control Knob position, a manual backflush can cause backflush fluid to flow through the path set by the Sample Injection Mode Control knob potentially contaminating the sample tube/plate and/or the sample station. Ensure the Sample Injection Mode Control Knob is positioned to match the correct CytExpert Sample Injection Mode. Clean up spills immediately.

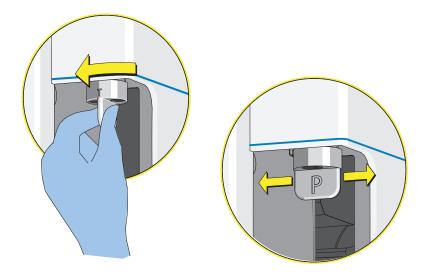

Use universal precautions when working with pathogenic materials. Means must be available to decontaminate the instrument and to dispose of biohazardous waste.

Risk of instrument damage. The sample probe can easily become damaged or deformed. To avoid damage to the sample probe, turn the switch module knob carefully and avoid contacting the sample probe.

- **NOTE** If you do not have the Sample Injection Mode Control Kit installed, refer to CHAPTER 12, Changing the Sample Probe from the Single Tube Sample Station to the Plate Loader [CytoFLEX With Plate Loader].
- Switch to the Plate Loader sample injection mode. Refer to CHAPTER 4, Selecting the Plate Loader Sample Injection Mode [With Plate Loader].

B49006AT

2 Turn the switch module knob to the left until the flat side of the knob is parallel to the front panel and the **P** is facing you. Ensure that the knob is turned as far as it will go.

The system is now ready for use in the Plate Loader sample injection mode.

NOTE If you do not see any events upon running an acquisition:

- **1.** Select **I** stop the acquisition.
- 2. Ensure that the switch module knob is turned as far as it will go.
- **3.** Rerun the acquisition.
- 4. If the problem persists, contact us.

Switching the Sample Probe from the Plate Loader to the Single Tube Sample Station [With Sample Injection Mode Control Knob]

Risk of biohazardous contamination if you have skin contact with the sample probe or the sample peristaltic pump tubing. The sample probe and the sample peristaltic pump tubing could contain residual biological material and must be handled with care. Clean up spills immediately.

Use universal precautions when working with pathogenic materials. Means must be available to decontaminate the instrument and to dispose of biohazardous waste.

Risk of biohazardous contamination and/or sample dilution when performing a manual backflush. If the CytExpert Sample Injection Mode does not match the Sample Injection Control Knob position, a manual backflush can cause backflush fluid to flow through the path set by the Sample Injection Mode Control knob potentially contaminating the sample tube/plate and/or the sample station. Ensure the Sample Injection Mode Control Knob is positioned to match the correct CytExpert Sample Injection Mode. Clean up spills immediately.

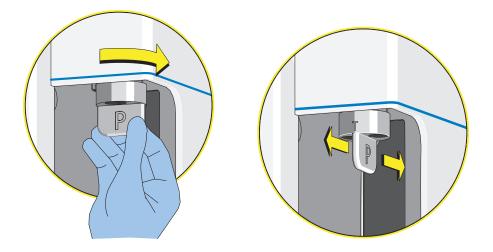

Use universal precautions when working with pathogenic materials. Means must be available to decontaminate the instrument and to dispose of biohazardous waste.

Risk of instrument damage. The sample probe can easily become damage or deformed. To avoid damage to the sample probe, turn the switch module knob carefully and avoid contacting the sample probe.

NOTE If you do not have the Sample Injection Mode Control Kit installed, refer to CHAPTER 12, Changing the Sample Probe from the Plate Loader to the Single Tube Sample Station [CytoFLEX With Plate Loader].

1 Switch to either the Semi-Automatic or manual sample injection mode. Refer to CHAPTER 4, Selecting the Proper Sample Injection Mode.

2 Turn the switch module knob to the right until the flat side of knob is perpendicular to the front panel and the **T** is facing you. Ensure that the knob is turned as far as it will go.

The system is now ready for use in either the Semi-Automatic or manual sample injection mode.

NOTE If you do not see any events upon running an acquisition:

- **1.** Select **I** stop the acquisition.
- 2. Ensure that the switch module knob is turned as far as it will go.
- **3.** Rerun the acquisition.
- 4. If the problem persists, contact us.

Specimen Collection Plate Specifications

Beckman Coulter does not recommend the use of one plate in preference to another nor guarantee the acceptability of the plates to produce quality results. If you need information on a plate not listed in Table D.1, ensure that the plate size and characteristics conform to the specifications listed below. Calibrate the plate position for any new plate types prior to acquisition. Refer to CHAPTER 12, Calibrating the Plate Position [With Plate Loader].

Table D.1 Deep Well Plate [with Plate Loader DW]

Name	Volume	Material	Manufacturer	PN
96-well deep well plate	1 mL	Polystyrene	Beckman Coulter	267001
96-well deep well plate	1 mL	Polypropylene	Beckman Coulter	267006
96-well deep well plate	2 mL	Polypropylene	Beckman Coulter	140504

NOTE Ensure that the following specifications are met when you select the 96-well deep well plates:

- The inner well diameter is \geq 5.8 mm.
- The plate height is \leq 45.5 mm.

Deep Well Plate Specimen Collection Plate Specifications

APPENDIX E Custom Optical Filters

Overview

IMPORTANT A custom optical filter could influence the performance of other channels due to the band pass and the reflection efficiency. Beckman Coulter recommends the operator to validate the performance of the custom optical filter within their configuration prior to accepting experimental results.

The optical filter is critical for optimal experiment results. When selecting an optical filter glass piece, the filter should comply with the following specifications.

Length	14.5 mm ± 0.1 mm
Width	6.1 mm ± 0.1 mm
Thickness	2.0 mm ± 0.1 mm
Incident angle	14 ° ± 2 °
Material	Fused silica, N-BK7, or equivalent
Surface quality	60/40 on both surfaces
Parallelism	\leq 20 arc seconds
Optical density	Make sure the optical density of the optical filter glass is big enough to block the wavelengths of the installed lasers to decrease the background noise.

Table E.1 CytoFLEX Platform Optical Filter Specifications

NOTE When installing a custom filter, you need to create a new detector configuration. Refer to CHAPTER 6, Verifying, Selecting, Editing, and Creating Detector Configuration. For QC, refer to CHAPTER 5, Instrument Quality Control and Standardization.

Installing a Custom Optical Filter

IMPORTANT Keep the optical filter mounting fixture for future use.

The optical filter mounting fixture is used to align the custom optical filter glass piece with the optical filter holder. The optical filter mounting fixture and the optical filter holder are optional accessories that can be purchased separately.

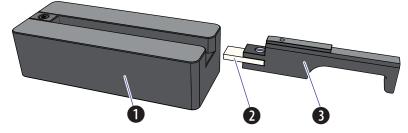

Figure E.1 Optical Filter Mounting Fixture and Optical Filter

- **1.** Optical filter mounting fixture
- 2. Custom optical filter glass piece
- 3. Optical filter holder

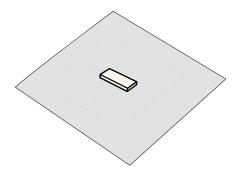

Before you start to install the custom optical filter glass piece, ensure the following items are available:

- Custom optical filter glass piece
- Optical filter mounting fixture
- Optical filter holder
- 3.0 mm flat-head screwdriver
- Lens papers
- Absolute ethanol

AUTION

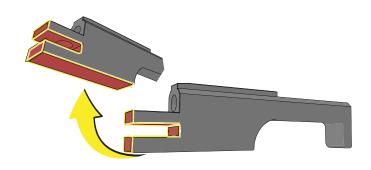

Risk of damage to the optical filter. When cleaning or replacing a filter, handle with care to avoid scratching the glass surface and to prevent the filter from falling. Use optical lens paper and absolute ethanol to clean the optical filters.

1 Place the new custom optical filter glass piece on a piece of clean lens paper.

2 Moisten a piece of lens paper with several drops of absolute ethanol.

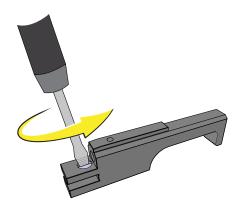

3 Using the moistened lens paper gently clean any spots on the surface of the optical filter glass piece and the socket of the optical filter holder.

4 Allow the custom optical filter glass piece to dry and check the optical filter glass piece for streaks.

NOTE If streaks remain, repeat Steps 2-3 until the custom optical filter glass piece is clean. If the optical filter glass piece is scratched, replace the optical filter glass piece as needed.

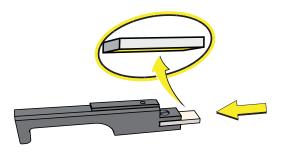

5 Using the 3.0 mm flat-head screwdriver, loosen the screw on the optical filter holder.

Risk of damage to the optical filter glass piece. Push the optical filter glass piece straight into the optical filter holder socket carefully. Inserting the optical filter glass piece at an angle could chip the edge of the optical filter glass piece.

Risk of damage to the optical filter glass piece. Do not touch the filter glass piece. Touching the optical filter glass can obscure and/or scratch the optical filter. Always handle the optical filter glass piece with lens paper.

6 Push the clean optical filter glass piece straight into the optical filter holder socket with the band pass coating surface facing down.

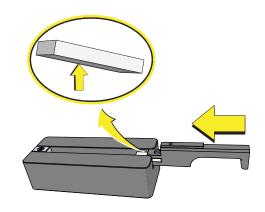

NOTE If you are unsure about which surface is the band pass coating surface, consult the supplier of your custom filter glass piece.

7 Using the 3.0 mm flat-head screwdriver, fasten the screw on the filter holder. Do not fully tighten the screw until adjustments are completed below.

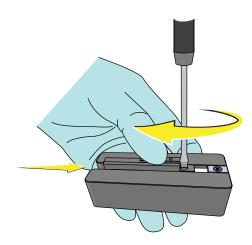

AUTION

Risk of damage to the optical filter. Push the filter all the way into the mounting fixture carefully. Inserting the filter at an angle could chip the edge of the filter glass piece.

8 Slide the optical filter into the slot of the optical filter mounting fixture until it touches the end of the fixture.

9 Hold the optical filter and tighten the screw using the 3-mm flat-head screwdriver.

- **10** If necessary, label the optical filter holder with the corresponding band pass information.
- **11** Install the optical filter into the WDM. Refer to CHAPTER 12, Replacing the Optical Filter.
- **12** Edit the detector configuration to ensure the correct display of axis labels. Refer to CHAPTER 6, Verifying, Selecting, Editing, and Creating Detector Configuration.

13 Run QC to check whether the custom filter has impacted the performance of the default channels. Refer to CHAPTER 5, Instrument Quality Control and Standardization.

NOTE QC will not provide a result for laser-filter combinations that do not have a target value.

14 If necessary, you need to adjust the filter screw slightly and repeat QC until optimal performance is achieved. Refer to Step 9 and Steps 11-13.

APPENDIX F WDM Beam Splitter

Overview

IMPORTANT This chapter applies to CytoFLEX LX instruments with the WDM beam splitter installed. The WDM beam splitter is installed by your Beckman Coulter Service Representative. The instrument configuration must have the IR laser and WDM activated to use the WDM beam splitter.

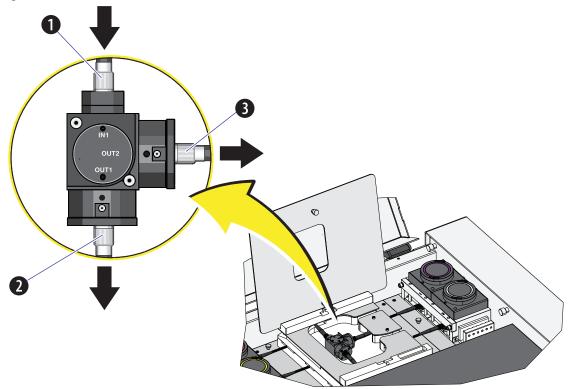

The WDM beam splitter splits the light from the UV, Near UV or Violet laser into the original WDM and the Infrared WDM. This results in the following new channels:

- V(S)712 for the Violet laser line
- N(S)740 and N(S)819 for the Near UV laser line
- U(S)740 and U(S)819 for UV laser lines.

Refer to Table 1.7.

NOTE The labels on the beam splitter ports indicate the direction that the fluorescence is transmitted. Refer to Figure F.1.

- 1. Fiber inlet: Connects to either violet, UV or NUV laser.
- 2. Beam outlet 1: Transfers the light with wavelength longer than 695 nm to the IR WDM.
- 3. Beam outlet 2: Transfers the light with wavelength shorter than 695 nm back to the original WDM.

	WDM	Fluorescent Channel (Standard)	Fluorescent Channel (WDM Beam Splitter)
		405/30 BP	405/30 BP
355 nm	355 nm	525/40 BP	525/40 BP
		675/30 BP	675/30 BP
	808 nm	840/20 BP	740/35 BP
		885/40 BP	819/44 BP
		450/45 BP	450/45 BP
	375 nm	525/40 BP	525/40 BP
		675/30 BP	675/30 BP
375 nm		840/20 BP	740/35 BP
	808 nm	885/40 BP	819/44 BP
		405/10 BP ^a	885/40 BP ^b
		450/45 BP	405/10 BP (VSSC)
		525/40 BP	450/45 BP
405 nm	405 nm	610/20 BP	525/40 BP
		660/10 BP	610/20 BP
		763/43 BP	660/10 BP
		840/20 BP	712/25 BP
	808 nm	885/40 BP	763/43 BP

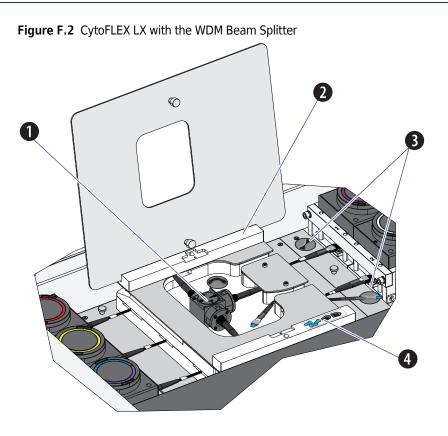

Table F.1 Configuration Comparison

a. This channel has no detector.

b. This channel has no detector.

NOTE The 712/25 BP filter, the 740/35 BP filter, and the 819/44 BP filter are supplied in the WDM beam splitter package.

Modifying Detector Configuration [With WDM Beam Splitter]

- 1. WDM beam splitter
- 2. Cover holder
- 3. Clips for idle fibers
- 4. Holder for idle fiber caps

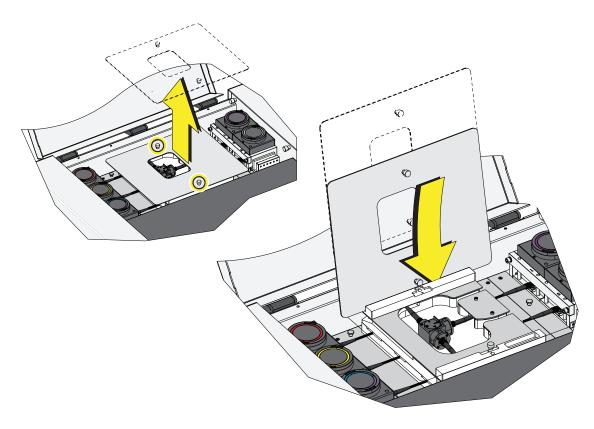

Table F.2 Optical Fibers with Indicator

Optical Fibers	Indicator	Name
	1	Long violet fiber
	2	Long UV/NUV fiber
	3	Red fiber
6	4	Yellow fiber
	5	Blue fiber
	6	Long IR fiber
	Violet color ring	Short violet fiber
	White color ring	Short UV/NUV fiber
	Red color ring	Short IR fiber

NOTE The short IR fiber, short violet fiber, and the short UV/NUV fibers are delivered with the WDM beam splitter package.

F

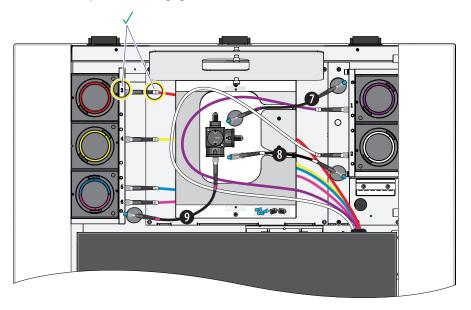

- **1** Open the top cover of the instrument.
- **2** Loosen the two thumbscrews securing the beam splitter cover and put the cover in the cover holder.

Risk of data integrity damage.

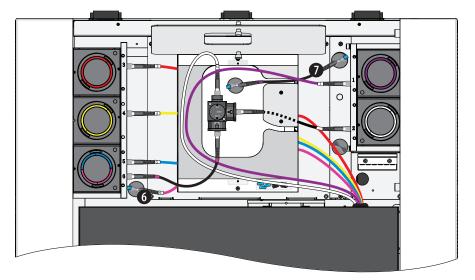

- During use, verify that the optical fibers are securely connected to the WDM. A loose connection can alter the optical path and affect fluorescence.
- Do not kink the optical fibers.
- **3** Connect the correct optical fibers to the corresponding WDMs as needed. Ensure the indicator number or the color ring of the optical fiber matches the corresponding WDM. Refer to Table F.2.

[WDM Beam Splitter-Not engaged]

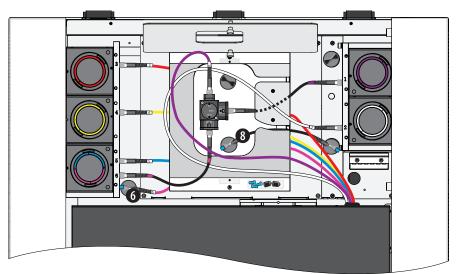

NOTE The short IR fiber (9), short violet fiber (7), and the short UV/NUV fiber (8) are idle.

[UV/NUV Splitter]

NOTE The long IR fiber (6), and the short violet fiber (7) are idle.

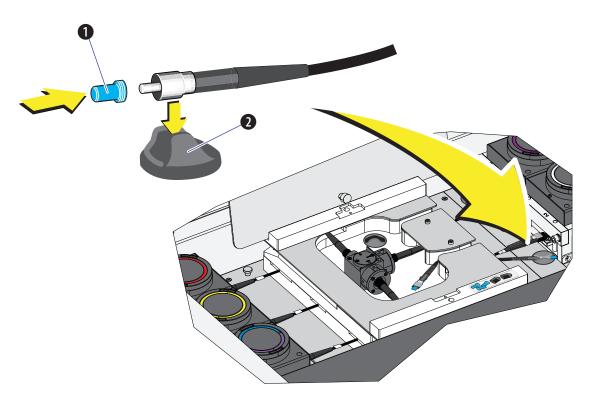

F

[Violet Splitter]

NOTE The long IR fiber (6), and the short UV/NUV fiber (8) are idle.

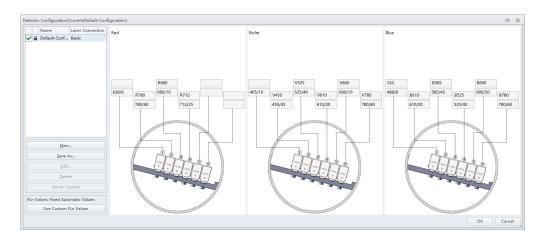

4 Put the blue fiber cap (1) on the head of idle fibers and fix the idle fibers in place with the fiber clips (2).

5 Change the optical filters in the WDM accordingly. Refer to Table F.1, Configuration Comparison for the positions of the corresponding optical filters. Refer to CHAPTER 12, Replacing the Optical Filter.

NOTE The optical system does not require realignment once the filters are changed.

6 Select the proper detector configuration. Refer to CHAPTER 6, Verifying, Selecting, Editing, and Creating Detector Configuration.

- **7** Verify the installed optical filters match the selected detector configuration.
- **8** Run QC. Refer to CHAPTER 5, Instrument Quality Control and Standardization.

h

Good Practices for Cyber Security

Overview

The following procedures are the only validated and approved recommendations for cyber privacy and security. Contact your IT professional for assistance.

- Changes below require Administrator Level Windows access.
- Before connecting to an external device such as a hard drive, USB, or DVD/CD, verify it does not have a virus or malware.

NOTE Beckman Coulter recommends using different anti-virus software to ensure that all viruses or malware can be identified.

- Disable all the unused USB ports on the instrument computer.
- Close all unnecessary applications while operating the CytExpert software.

System integrity could be compromised and operational failures could occur if:

- This equipment is used in a manner other than specified. Operate the instrument as instructed in the Product Manuals.
- You introduce software that is not authorized by Beckman Coulter into your computer. Only operate your system's computer with software authorized by Beckman Coulter.
- You install software that is not an original copyrighted version. Only use software that is an original copyrighted version to prevent virus contamination.

This chapter contains information on:

- Drive Encryption
- Protection from Malware Software
- Operating System Updates
- System Hardening

Drive Encryption

Your Windows 10 system is equipped with BitLocker. Use BitLocker disk encryption software to prevent unauthorized access to your hard drive, refer to BitLocker Keys. For instructions on BitLocker Encryption or BitLocker Decryption, see Enabling BitLocker or BitLocker Decryption.

IMPORTANT BitLocker is the only approved encryption method.

BitLocker Keys

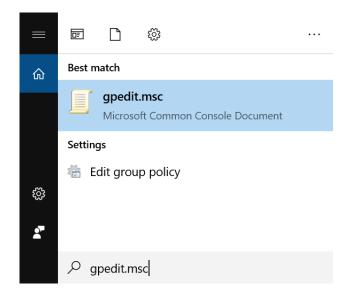

Risk of data loss. Store your BitLocker key in a safe place. For instructions on saving your BitLocker key, refer to Backing Up Your Recovery Key. If you lose your BitLocker Key, you will lose access to your entire hard drive including all of your data. Beckman Coulter is not responsible for security keys and will not be able to recover your data off your hard drive. Work with your IT department in creating and storing the keys in a safe place.

Changing Encryption Strength Level for BitLocker

BitLocker defaults to XTS-AES 128-bit encryption method. To alter the encryption, follow the steps below before enabling BitLocker. Changes to the encryption level will only impact the encryption of new volumes. Work with your IT department to change the Encryption Strength Level.

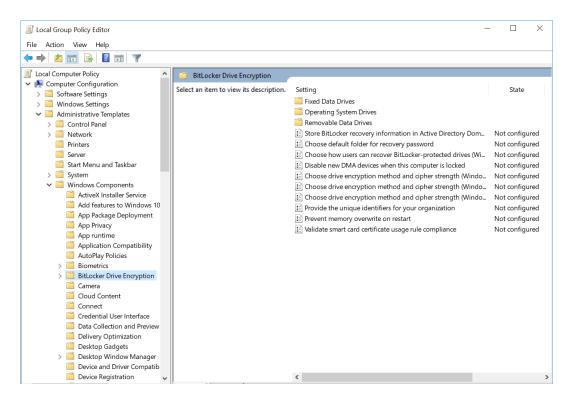

Changing the encryption strength for BitLocker

BitLocker Decryption

IMPORTANT Turning off the BitLocker feature decrypts all the data on the drive. Decrypting your operating system means that you have removed BitLocker from your system. The BitLocker key will change each time BitLocker is re-enabled. Only the latest BitLocker key will work. Previous BitLocker keys will be invalid and will not unlock the system. Please note this is a time-consuming process. However, you can also suspend BitLocker instead of decrypting the drive, see Suspending BitLocker Drive Encryption.

Turning off BitLocker

1 Type Manage BitLocker from the Windows search bar to locate the Manage BitLocker Control Panel.

After the decryption has completed, the following screen displays.

Suspending BitLocker Drive Encryption

IMPORTANT Suspending BitLocker Drive Encryption is a temporary method for removing BitLocker protection without decrypting the Windows drive. Use Suspend BitLocker if you need to update the BIOS firmware or Windows boot loader/startup files that requires access to the drive in a pre-boot environment. This will help prevent BitLocker from locking the drive and can avoid a lengthy decryption process.

Suspending BitLocker

1 Type **Manage BitLocker** from the Windows search bar to locate the Manage BitLocker Control Panel.

A confirmation message "Do you want to suspend BitLocker protection?" displays.

BitLocker Drive Encryption	\times
Do you want to suspend BitLocker protection	?
If you do, your data won't be protected. You might need to temporarily suspend BitLocker if you're updating your PC's firmware, hardware, or operating system. If you forget to resume BitLocker protection, it'll resume automatically the next time you restart your PC.	
Yes No	

IMPORTANT If you choose to suspend BitLocker, your data will not be protected.

4 If you want to proceed, select **Yes** and the following popup information will display.

Protection is suspended Protection of G; by BitLocker Drive Encryption is suspended. Click to manage BitLocker settings. BitLocker Drive Encryption Notification Utility
BitLocker Drive Encryption Notification Utility

If you do not want to proceed, select No.

NOTE There are certain situations where you may want to suspend BitLocker such as updating your PC's firmware, hardware, or operating system. If you forget to resume BitLocker after these updates are completed, BitLocker will resume automatically the next time you restart your PC.

Restarting BitLocker Protection

1 Select **Resume Protection**.

Recovering Your BitLocker Key

There might be situations where the BitLocker Key is requested from your computer, such as:

- Your drive is placed onto another computer
- Computer requests your recovery key, it may be due to one of the following but is not limited to:
 - Hardware changes
 - Firmware changes
 - Other Windows updates

BitLocker Recovery

1 BitLocker Recovery window will be displayed upon powering on your system.

Protection from Malware Software

<u>A</u> CAUTION

The instrument workstation is vulnerable to malware, viruses, and unauthorized access if the instrument PC is connected directly to the laboratory network without installation of all approved OS and malware patches.

IMPORTANT Only the version of the McAfee Application Control (Version 8.3) has been validated to work with the CytoFLEX platform instrument.

For more information on Configuration of McAfee Application Control, refer to McAfee Application Control Guide.

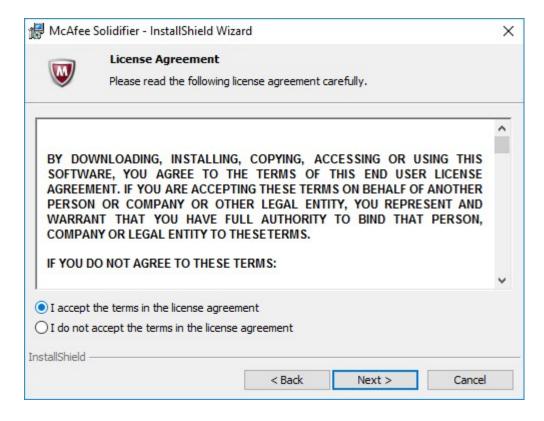

Installing McAfee Application Control

- **IMPORTANT** The McAfee Application Control Software (version 8.3) should be purchased separately from Trellix/McAfee.
- 1 Unzip the McAfee Application Control file SOLIDCORXXX_XXX_WIN.zip
- **2** Right-click **Setup-win-8-10-2012-amd64-xxx.exe**, and select **Run as administrator**. The McAfee Installer opens.

J

3 Select **Next**. The License Agreement displays.

Read the license agreement and select I accept the terms in the license agreement, then select Next.

7 Select Finish.

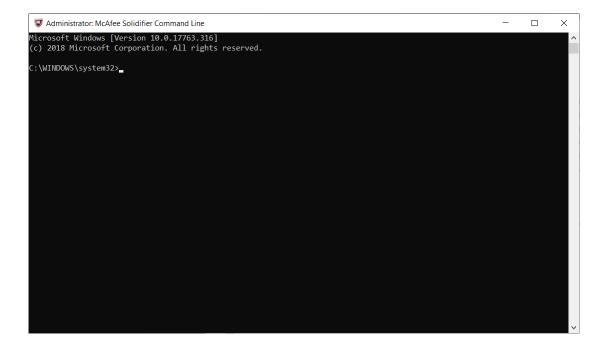

Enabling McAfee Application Control

The enabled McAfee Application Control Software prevents your system from executing unauthorized applications on your instrument workstation.

IMPORTANT Ensure all the necessary applications have been installed prior to enabling the McAfee Application Control.

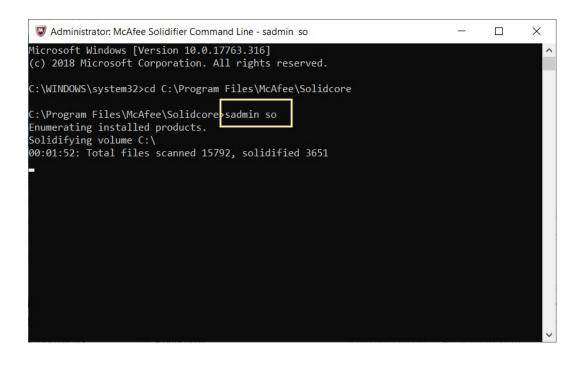

1 Right-click Matee on your desktop, and select **Run as administrator**. The following window displays.

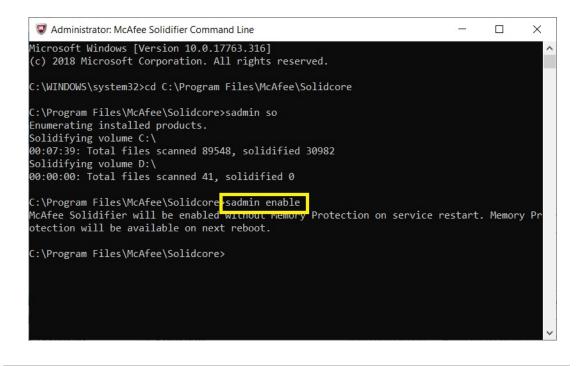

2 Enter cd C:\Program Files\McAfee\Solidcore.

	Administrator: McAfee Solidifier Command Line	-	×
Mic	rosoft Windows [Version 10.0.17763.316]		^
	2018 Microsoft Corporation. All rights reserved.		
C:\	<pre>dINDOWS\system32:cd C:\Program Files\McAfee\Solidcore_</pre>		
			\sim

3 Enter **sadmin so** in the console to scan the system and create a white list. The solidification process takes about 30 minutes depending on your system size and CPU performance.

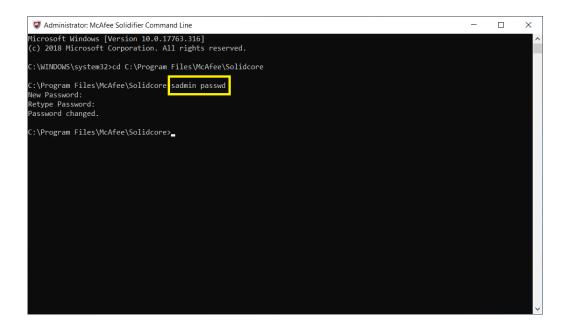

4 Enter **sadmin enable** to enable the McAfee Application Control.

IMPORTANT Beckman Coulter recommends setting a password to manage the authority of enabling/disabling the McAfee Application Control.

5 Enter **sadmin passwd** to set a password to lock the McAfee Application Control authority.

6 Restart the system.

Exporting the Certificate

Follow procedures below to export the certificate of CytExpert software into your PC.

1 Right-click on the application **CytExpert for xxxx Setup**, and select **Properties**. The following window displays.

Importing BEC Certificate

Follow the procedures below to add the certificate of CytExpert software into the McAfee Certificate list. All the certified applications will be regarded as trusted and authorized by the McAfee Application Control.

IMPORTANT McAfee Application Control recognize only X.509 certificates.

1 Copy the certificate *BEC.cer* from the CytExpert software disk into your instrument PC.

Right-click solidifiem on your desktop, and select **Run as administrator**. The following window 2 displays.

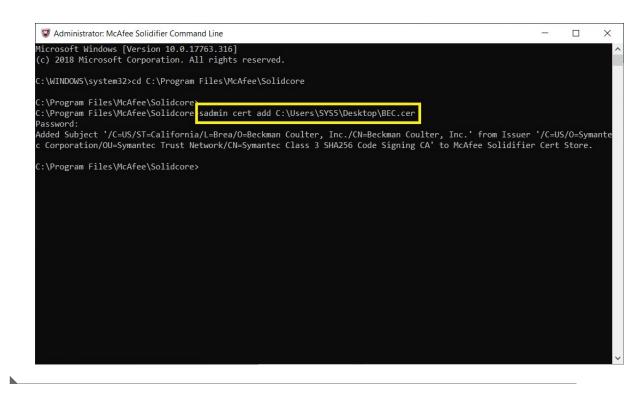

3 Enter cd C:\Program Files\McAfee\Solidcore.

J

4 Enter sadmin cert add C:\BEC.cer to add the certificate.

Switching McAfee Application Control to Update Mode

The update mode allows the McAfee Application Control to scan the instrument workstation and add the newly-installed application into the white list automatically. Switch the McAfee Application Control to the update mode when you execute scheduled or emergency changes on your instrument workstation.

1

Right-click solution on your desktop, and select **Run as administrator**. The following window displays.

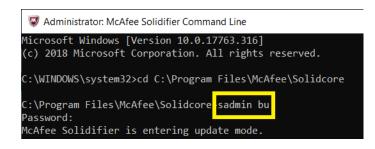

2 Enter cd C:\Program Files\McAfee\Solidcore.

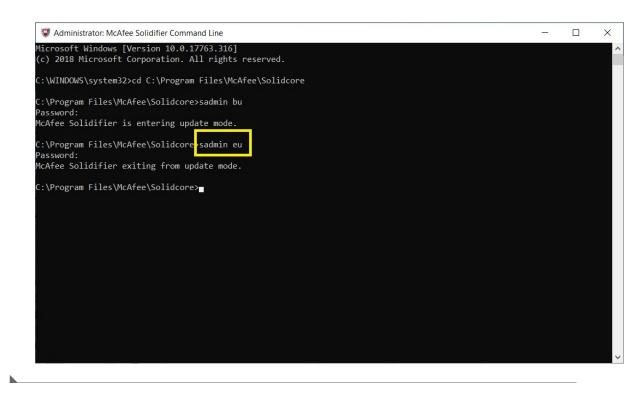

J

3 Enter **sadmin bu** to switch the McAfee Application Control to Update Mode.

- **4** Execute scheduled or emergency changes, patch installations, or software updates for your instrument workstation.
- **5** Enter **sadmin eu** to exit the Update Mode.

Disabling McAfee Application Control

IMPORTANT Disabling McAfee Application Control is a temporary method in special cases, for example, Windows or firmware changes. This will help stop McAfee Application Control from blocking unauthorized applications. Beckman Coulter recommends enabling the McAfee Application Control in most cases.

All the applications installed in this mode will not be included in the McAfee white list.

1

Right-click Medice on your desktop, and select **Run as administrator**. The following window displays.

2 Enter cd C:\Program Files\McAfee\Solidcore.

3 Enter sadmin disable in the console.

- 4 Select Enter.
- **5** Restart the System.

6 Enter **sadmin status** to view the status of McAfee Application Control.

Operating System Updates

🕂 WARNING

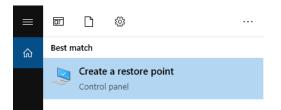

Risk of software incompatibility. Only operating system updates posted to the Beckman Coulter website should be installed on the instrument controller PC. Do not install patches from any other source.

Install the update on one instrument and verify functionality before installing on other instruments.

- **IMPORTANT** For information on the currently supported Windows build and security updates, consult the Release Notes of the latest validated update posted to the website (see Downloading Operating System Updates for details).
- **IMPORTANT** Before installing the operating system updates, ensure you have a recent backup of the instrument database and experiment files, refer to CHAPTER 10, Backup and Restore, and the current BitLocker key, refer Backing Up Your Recovery Key. Ensure the backups are saved to an encrypted external media or secured network drive.

Enabling System Protection

1 In the Start Menu, type **Restore** to locate the **Create a Restore Point**.

2 Double-click **Create a Restore Point** to open the System Properties window.

System Properties	×
Computer Name Hardware Advanced Syste	m Protection Remote
Use system protection to undo unwa	inted system changes.
System Restore	
You can undo system changes by reverting your computer to a previous restore point.	System Restore
Protection Settings	
Available Drives	Protection
Windows (C:) (System)	On
Configure restore settings, manage disk sp and delete restore points. Create a restore point right now for the drive	Configure
have system protection turned on.	
ОК	Cancel Apply

3 Select Configure.

System Properties	×
Computer Name Hardware Advanced System Protection Remote	
Use system protection to undo unwanted system changes.	
System Restore	
You can undo system changes by reverting your computer to a previous restore point. <u>System Restore</u>	
Protection Settings	
Windows (C:) (System) On	
Configure restore settings, manage disk space, Configure and delete restore points. Create a restore point right now for the drives that	
have system protection turned on.	
OK Cancel Apply	

The following window appears.

System Protection for Windows (C:)	×
Restore Settings	
By enabling system protection, you can undo undesired changes by reverting your computer to a previous point in time.	
Turn on system protection	
O Disable system protection	
Disk Space Usage	
You can adjust the maximum disk space used for system protection. As space fills up, older restore points will be deleted to make room for new ones.	
Current Usage: 1.01 GB	
Max Usage:	
5% (11.77 GB)	
Delete all restore points for this drive. Delete	
OK Cancel Apply	

4 Select **Turn on system protection**, then select **Apply**.

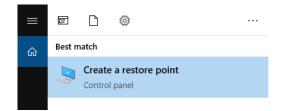

5 Close the System Properties window by selecting **ΟΚ**.

Creating a Restore Point

A restore point is used to remove all software and update installations that occurred after it was created. If installing an update on your PC causes any loss of functionality, the restore point can be used to place the system back into the operable state present before the update installation. In all cases, a system restore with any restore point would not cause loss of any data (i.e. LMD files) on the system.

Risk of unexpected software modification. To ensure a system recovery point is available that is indicative of the most recent software configuration, the user should create a system restore point immediately prior to running the operating system update installer. Otherwise, a user would need to utilize the most recent automatically created restore point which might be up to 72 hours old and not include all recent software modifications.

1 In the Start Menu, type **Restore** to locate the **Create a Restore Point**.

2 Double-click **Create a Restore Point** to open the System Properties window.

System Properties	×
Computer Name Hardware Advanced Syste	m Protection Remote
Use system protection to undo unwa	nted system changes.
System Restore	
You can undo system changes by reverting your computer to a previous restore point.	System Restore
Protection Settings	
Available Drives	Protection
🛀 Windows (C:) (System)	On
Configure restore settings, manage disk spa and delete restore points.	ace, Configure
Create a restore point right now for the drive have system protection turned on.	es that Create
ОК	Cancel Apply

- **3** Type a name for the restore point and select **Create**.
- **4** Wait for the restore point creation to complete and then select **Close**.
- **5** Close the System Properties window by selecting **OK**.

Downloading Operating System Updates

In order to download and install operating system updates, you will need to access the Beckman Coulter website at www.beckmancoulter.com.

IMPORTANT Account registration is required for new users.

Go to www.beckmancoulter.com.

- **2** Using the menu bar in the in the upper right hand corner of the screen, hover over **Login**, then scroll down to select **Software Downloads**.
- **3** To search by product:
 - a. Select Research & Discovery from the Market Segment drop-down menu.
 - **b.** Select **Flow Cytometry** from the Product Line. drop-down menu.
 - c. Select Instruments from the Product Series drop-down menu.
 - **d.** Select **CytoFLEX** from the Product drop-down menu.
- 4 Select Search.
- **IMPORTANT** Print out the Release Notes for each update as they will not be available when the next update is released. The Component Name section of the release notes identifies the Microsoft updates that are included in the download. This information may be requested by your IT team and will be needed to recover from a failed update.
- 5 Each operating system update is cumulative and only the most recent validated set of updates will be available for download. Select the first file in the results to view the release notes and

then select Download

If more than one update is listed in the search results, select **Back**, and repeat this step for each update.

If the operating system updates cannot be not downloaded directly to the instrument controller system, transfer the downloaded files via an encrypted external media or secured network drive to the instrument controller PC.

Notification Options

To receive notification when a new operating system update is validated and available for download, you must sign up for an account on www.beckmancoulter.com and follow the procedure for setting up subscriptions.

Sign up for subscriptions as outlined below:

- Select the **Document Language** consistent with your IFU language.
- Select Research & Discovery from Market Segment.
- Select Flow Cytometry from Product Line.
- Select Instruments from Product Series.
- Select **CytoFLEX** from Product.

If you do not sign up for product notifications, you will have to check periodically for newly released operating system updates, see Downloading Operating System Updates.

J

Installing the Operating System Updates

Risk of software incompatibility. Beckman Coulter can only support operating system updates on unmodified systems. Application of domain policies or other configuration changes may impact compatibility.

- **IMPORTANT** If more than one update is available for your product, install the updates in the order indicated by the sequence number as outlined in the file naming convention below. RSU-<Operating System> <Product Name>-<Year><Month>_<Sequence #>_<Sequence Revision#> Example: RSU-W10-CytoExpert-2021Sep_1_0
- 1 Ensure you have a recent copy of your BitLocker key, refer to Backing Up Your Recovery Key.
- **2** Login to Windows as a user with Administrator access.
- **3** Close all program and save open files.
- **4** Power down the instrument.

5 Open the first operating system update file (For example: RSU-W10LTSC-CytoFLEX-2020Jun_1_0) on the Instrument Controller PC by double-clicking on the file. If the Microsoft Windows Defender Smart Screen prompt appears, select **More Info** and **Run Anyway** to launch the installer. This process may take several minutes. See Figure G.6.

CytoFLEX S	RT Operating System Update Install	- 🗆 🗙

ОК	

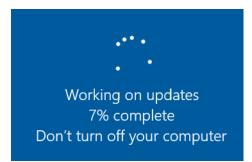

J

7 Wait while the system completes the installation of the security updates. This process may take several minutes and will return you to the Windows login screen. See Figure G.9.

Figure G.9 Working on Completing Security Updates

- **8** Install any additional downloaded operating system updates (sequence numbers above 1) by repeating Steps 4 to 6.
- **9** Verify functionality of instrument software before installing operating system updates on any other system. If functionality is impaired, see Recovering from Failed Operating System Updates.

Recovering from Failed Operating System Updates

These steps below should only be followed if the instrument software or operating system functionality is impaired after an operating system update was applied.

- **1** Power down the instrument and close all programs. Do not turn your workstation off.
- 2 In the start menu, type view update and select **View your Update History**.
- **3** Select Uninstall Updates.
- **4** Highlight the update listed under Microsoft Windows that matches the cumulative security update KB number in the release notes. Refer to Component Name section of the Release Notes, see Step 5, Downloading Operating System Updates.
- **5** Select **Uninstall** and select **Yes** when prompted to verify the uninstall. This process may take several minutes to complete.

- **6** When prompted to restart, select **Restart Now**.
- 7 Once the PC has been rebooted, login and verify Microsoft update has been removed by repeating Steps 2 and 3. Verify the KB selected in Step 4 is no longer listed.
- **8** Power on the instrument and verify restored software functionality.
 - If software functionality has been restored, continue using your instrument without the update installed. Contact us for troubleshooting the update incompatibility.
 - If software functionality has not been restored and the PC was not provided by Beckman Coulter, contact laboratory IT for system restore options.
 - If software functionality has not been restored and the PC was provided by Beckman Coulter, contact us for system restore.

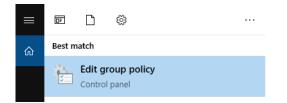

System Hardening

Enabling Automatic Log-Off

IMPORTANT Automatic log-Off can protect your instrument PC from unauthorized operation when you leave the PC temporarily. Follow the steps below to enable the Screen Saver protection.

Enabling SMB Digitally Sign Communications

The Server Message Block (SMB) protocol provides the basis for file and print sharing and many other networking operations, such as remote Windows administration. To prevent man-in-the-middle attacks that modify SMB packets in transit, follow the instructions below to enable the SMB Digitally Sign Communications.

1 Type **Edit group policy** from the Windows search bar to locate the **Edit group policy editor** control panel.

2 Select **Edit group policy editor**. The Local Group Policy Editor window displays.

	Help:		
	This policy setting permits users to change installation options that typically are available only to system administrators. If you enable this policy setting, some of the security features of Windows Installer are bypassed. It permits installations to complete that otherwise would be halted due to a security violation. If you disable or do not configure this policy setting, the security features of Windows Installer prevent users from changing installation options typically reserved for system administrators, such as specifying the directory to which files are installed. If Windows Installer detects that an installation package has permitted the user to change a protected option, it stops the installation and displays a message. These security features operate only when the installation program is running in a privileged security context in which it has access to directories denied to the user. This policy setting is designed for less restrictive environments. It

Beckman Coulter, Inc. SOFTWARE END-USER LICENSE AGREEMENT

IMPORTANT: READ THIS END-USER LICENSE AGREEMENT:

THIS END-USER LICENSE AGREEMENT ("*Agreement*") GOVERNS THE USE OF CERTAIN COMPUTER PROGRAMS ASSOCIATED WITH THE CORRESPONDING PRODUCT ("*Product*") OF BECKMAN COULTER, INC. OR ITS AFFILIATES ("*BCP*"). YOUR USE OF SUCH COMPUTER PROGRAMS, YOUR PURCHASE OF THE PRODUCT, AND/OR YOUR USE OF THE PRODUCT CONSTITUTES ASSENT AND ACCEPTANCE OF THIS AGREEMENT BY YOU (collectively "*You*" or "*Your*") AND SIGNIFIES YOUR AGREEMENT TO BE BOUND BY THE TERMS AND CONDITIONS OF THIS AGREEMENT. IF YOU DO NOT AGREE WITH ALL OF THE TERMS AND CONDITIONS OF THIS AGREEMENT, YOU DO NOT HAVE THE RIGHT TO AND MAY NOT USE THE COMPUTER PROGRAMS PROVIDED.

- GRANT OF LICENSE. Subject to all of the terms and conditions of this Agreement, BCI grants to You
 a non-exclusive, non-sub licensable license to use the computer programs provided by BCI
 ("Programs") in connection with and/or installed on the Product, and the associated user
 documentation ("Documentation") (together with the Programs referred to herein, collectively, as the
 ("Software")), only in accordance with the Documentation ("License"). You have no right to receive,
 use or examine any source code or design documentation relating to the Programs. The Software is
 licensed and not sold. As between the parties, BCI and its licensor retains all right, title and interest in
 and to the Software and any and all derivative works, except as expressly and unambiguously licensed
 herein, and BCI reserves all rights in the Software not granted to You. Except as otherwise expressly
 provided under the Agreement, You shall only use the Software for Your internal research and
 development purposes.
- 2. USE RESTRICTIONS. You shall not (and shall not allow others to), directly or indirectly:
 - **a.** use (including make any copies of) the Programs beyond the scope of the license granted under Section 1.;
 - **b.** modify, translate, adapt, or otherwise create derivative works or improvements, whether or not patentable, of the Programs or any part thereof;
 - **c.** combine the Programs or any part thereof with, or incorporate the Programs or any part thereof in, any other programs;
 - **d.** reverse engineer, disassemble, decompile, decode, or otherwise attempt to derive or gain access to the source code of the Programs or any part thereof;
 - **e.** reverse engineer, disassemble, decompile, decode, or otherwise attempt to derive or gain access to the object code of the Programs or any part thereof;
 - **f.** remove, delete, alter, or obscure any trademarks or any copyright, trademark, patent, or other intellectual property or proprietary rights notices provided on or with the Software, including any copy thereof;
 - **g.** rent, lease, lend, sell, sub license, assign, distribute, publish, transfer, or otherwise make available the Programs, or any features or functionality of the Programs, to any third party for any reason, whether or not over a network or on a hosted basis, including in connection with the Internet or any web hosting, wide area network (WAN), virtual private network (VPN), virtualization, time-sharing, service bureau, software as a service, cloud, or other technology or service;
 - **h.** use the Software in, or in association with, the design, construction, maintenance, or operation of any hazardous environments or systems;
 - i. use the Software in violation of any law, regulation, or rule; or

- **j.** use the Software for purposes of competitive analysis of the Programs, the development of a competing software product or service, or any other purpose that is to BCI's commercial disadvantage.
- **3. TERMINATION.** The License is effective until terminated. You may terminate the Agreement and the License at any time by destroying all copies of the Programs. The License will terminate automatically without notice if You fail to comply with any provision of this Agreement. Within fourteen (14) days following termination, You shall cease all use of, and, destroy all copies of the Software in Your possession or control and so certify to BCI in writing. Except for the License, the terms of this Agreement shall survive termination. Termination is not an exclusive remedy and all other remedies will be available to BCI whether or not the License is terminated.
- 4. SOFTWARE SUPPORT. Please refer to the BCI support number provided in the Documentation for the Product for information regarding support of the Product.
- 5. DISCLAIMER OF WARRANTY. THE SOFTWARE IS PROVIDED TO YOU "AS IS" AND WITH ALL FAULTS AND DEFECTS WITHOUT WARRANTY OF ANY KIND. TO THE MAXIMUM EXTENT PERMITTED UNDER APPLICABLE LAW, BCI, ON ITS OWN BEHALF AND ON BEHALF OF ITS AFFILIATES AND ITS AND THEIR RESPECTIVE LICENSORS AND SERVICE PROVIDERS, EXPRESSLY DISCLAIMS ALL WARRANTIES, WHETHER EXPRESS, IMPLIED, STATUTORY, OR OTHERWISE, WITH RESPECT TO THE SOFTWARE, INCLUDING ALL IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, AND NON-INFRINGEMENT, AND WARRANTIES THAT MAY ARISE OUT OF COURSE OF DEALING, COURSE OF PERFORMANCE, USAGE, OR TRADE PRACTICE. WITHOUT LIMITATION TO THE FOREGOING, BCI PROVIDES NO WARRANTY OR UNDERTAKING, AND MAKES NO REPRESENTATION OF ANY KIND THAT THE LICENSED SOFTWARE WILL MEET YOUR REQUIREMENTS, ACHIEVE ANY INTENDED RESULTS, BE COMPATIBLE, OR WORK WITH ANY OTHER SOFTWARE, APPLICATIONS, SYSTEMS, OR SERVICES, OPERATE WITHOUT INTERRUPTION, MEET ANY PERFORMANCE OR RELIABILITY STANDARDS OR BE ERROR FREE, OR THAT ANY ERRORS OR DEFECTS CAN OR WILL BE CORRECTED.
- **6. LIMITATION OF LIABILITY.** TO THE FULLEST EXTENT PERMITTED UNDER APPLICABLE LAW:
 - IN NO EVENT WILL BCI OR ITS AFFILIATES, OR ANY OF ITS OR THEIR RESPECTIVE a. LICENSORS OR SERVICE PROVIDERS, BE LIABLE TO YOU OR ANY THIRD PARTY FOR ANY USE, INTERRUPTION, DELAY, OR INABILITY TO USE THE SOFTWARE; LOST REVENUES OR PROFITS; DELAYS, INTERRUPTION, OR LOSS OF SERVICES, BUSINESS, OR GOODWILL; LOSS OR CORRUPTION OF DATA; LOSS RESULTING FROM SYSTEM OR SYSTEM SERVICE FAILURE, MALFUNCTION, OR SHUTDOWN; FAILURE TO ACCURATELY TRANSFER, READ, OR TRANSMIT INFORMATION; FAILURE TO UPDATE OR PROVIDE CORRECT INFORMATION; SYSTEM INCOMPATIBILITY OR PROVISION OF INCORRECT COMPATIBILITY INFORMATION; OR BREACHES IN SYSTEM SECURITY; OR FOR ANY CONSEQUENTIAL, INCIDENTAL, INDIRECT, EXEMPLARY, SPECIAL, OR PUNITIVE DAMAGES, WHETHER ARISING OUT OF OR IN CONNECTION WITH THIS AGREEMENT, BREACH OF CONTRACT, TORT (INCLUDING NEGLIGENCE), OR OTHERWISE, REGARDLESS OF WHETHER SUCH DAMAGES WERE FORESEEABLE AND WHETHER OR YOU WERE ADVISED OF THE POSSIBILITY OF SUCH DAMAGES;
 - **b.** IN NO EVENT WILL THE COLLECTIVE AGGREGATE LIABILITY OF BCI AND ITS AFFILIATES, INCLUDING ANY OF THEIR RESPECTIVE LICENSORS AND SERVICE PROVIDERS, UNDER OR IN CONNECTION WITH THIS AGREEMENTOR ITS SUBJECT MATTER, UNDER ANY LEGAL OR EQUITABLE THEORY, INCLUDING BREACH OF CONTRACT, TORT (INCLUDING NEGLIGENCE), STRICT LIABILITY, AND OTHERWISE, EXCEED TWO HUNDRED AND FIFTY DOLLARS (US\$250); AND

- **c.** THE LIMITATIONS SET FORTH IN THIS SECTION 6. SHALL APPLY EVEN IF YOUR REMEDIES UNDER THIS AGREEMENT FAIL OF THEIR ESSENTIAL PURPOSE.
- 7. U.S. GOVERNMENT RIGHTS. The Software is commercial computer software, as such term is defined in 48 C.F.R. §2.101. Accordingly, if You are the US Government or any contractor therefor, You shall receive only those rights with respect to the Software as are granted to all other end users under license, in accordance with
 - a. 48 C.F.R. §227.7201 through 48 C.F.R. §227.7204, with respect to the Department of Defense and their contractors, or
 - b. 48 C.F.R. §12.212, with respect to all other US Government licensees and their contractors.
- 8. EXPORT REGULATION. The Software may be subject to US export control laws, including the US Export Administration Act and its associated regulations. You shall not, directly or indirectly, export, re-export, or release the Software to, or make the Software accessible from, any jurisdiction or country to which export, re-export, or release is prohibited by law, rule, or regulation. You shall comply with all applicable federal laws, regulations, and rules, and complete all required undertakings (including obtaining any necessary export license or other governmental approval), prior to exporting, re-exporting, releasing, or otherwise making the Software available outside the US.
- 9. INTELLECTUAL PROPERTY RIGHTS. You acknowledge and agree that the Software is provided under license, and not sold, to You. You do not acquire any ownership interest in the Software under this Agreement, or any other rights thereto, other than to use the same in accordance with the license granted and subject to all terms, conditions, and restrictions under this Agreement. BCI shall retain its entire right, title, and interest in and to the Software and all intellectual property rights arising out of or relating to the Software, except as expressly granted to You in this Agreement. You shall use commercially reasonable efforts to safeguard all Software (including all copies thereof) from infringement, misappropriation, theft, misuse, or unauthorized access.
- 10. THIRD PARTY COMPONENTS; ADDITIONAL TERMS. The Software may contain or be delivered with one or more components, which may include third-party components, identified by BCI in the Documentation, readme.txt file, third-party click-accept or elsewhere (e.g., on www.beckman.com or attached to this Agreement as an appendix) (the "Identified Component(s)") as being subject to different license agreement terms, disclaimers of warranties, limited warranties or other terms and conditions (collectively, "Additional Terms") than those set forth herein. You agree to the applicable Additional Terms for any such Identified Component(s).
- 11. MISCELLANEOUS. You may not assign this Agreement or any of Your rights hereunder without BCI's prior written consent and any attempt to do so without such consent shall cause this Agreement and any of Your associated rights hereunder to be null and void. No failure to exercise any right hereunder will operate as a waiver thereof. If any provision of this Agreement shall be adjudged by any court of competent jurisdiction to be unenforceable or invalid, that provision shall be limited or eliminated to the minimum extent necessary so that this Agreement shall otherwise remain in full force and effect and enforceable. This Agreement shall be construed in accordance with the laws of the State of California and the United States without regard to conflicts of laws provisions thereof and without regard to the United Nations Convention on Contracts for the International Sale of Goods. The sole and exclusive jurisdiction and venue for any actions related to the subject matter hereof shall be the state and U.S. federal courts located in the County of Orange, California. You irrevocably submit to the jurisdiction of such courts and consent to venue in such forum with respect to any action or proceeding that relates to this Agreement. The prevailing party in any action to enforce this Agreement shall be entitled to recover its reasonable costs and expenses including reasonable attorneys' fees. No amendment to or modification of this Agreement will be binding unless in writing and signed by a duly authorized officer of BCI. This Agreement is in the English language only, which language shall be controlling and any revision of this Agreement in any other language shall not be binding. Both parties agree that this Agreement is the complete and exclusive statement of the mutual understanding of the parties relating to the subject matter of this Agreement.
